All these arrangements seem to imply a simple aid from the income of the school lands to whatever form of education the people might see fit to provide within the districts for the training of their children. No provision for taxation to supplement this aid appears, nor any for erecting school-houses and giving in them to the children of the poor kindred advantages with those for the children of the rich. In 1821, January 22, came the dawn of a new era in these respects. At this date a law was passed authorizing the school committee in each district to build a school-house, employ and pay a teacher, and provide a school open to all scholars of suitable age within the district. For these purposes they might levy a tax equal to half the State or county tax on the property of the district. The law evidently did not contemplate the making of the school entirely free, for the committee might cause the expenses of it to be assessed on the parents or guardians according to the number of scholars sent, but only free to such parents as were unable to pay their portion of the assessed expenses. To these the committee might remit all or a portion of the expense, and make up the deficiency by a tax, as above.

February 5, 1825, came another law looking to an improvement in the schools through a securing of better teachers and of some degree of supervision, as well as of funds for them through a State tax. Under this act three directors were to be chosen in each district, to hold office one year, to employ and pay a teacher, manage and superintend the district school, call district meetings, and receive and expend all funds for the benefit of the school or schools beneath their care. No teacher was to be employed, however, who could not present a certificate of examination and approval from a county board, which now makes its appearance, and which, as at first constituted, was composed of three persons appointed annually by the county court of common pleas, and authorized not only to examine teachers, but also to visit and examine schools. The right of visitation had connected with it, at the outset, a right to advise as to discipline and instruction, which was taken away five years after, while the right to visit and examine schools was also withheld in 1838, because provided for in other ways. But the idea of some degree of supervision by both district and county officers inhered from this time in whatever school system was provided for. The district directors served, as a body, for terms of one year each till 1842, when the term was made three years, one director being changed each year. The board of county examiners, with occasional modifications of its numbers, duties, powers, and term, has continued to be a part of the county system to this day.

March 27, 1837, a great step in advance was taken by the creation of the office of State superintendent of common schools, and the filling of it with a man of peculiar adaptation to the work, Mr. Samuel Lewis, of Cincinnati, a native of Massachusetts. Known previously as an earnest advocate of popular education, he was, though of no

high culture, prepared for his office by the possession of an original mind, a healthy moral nature, a natural eloquence, and a practical acquaintance with the work of influencing men. Appointed superintendent by joint resolution of the two houses of the legislature on the fourth day after the passage of the law, and commissioned by the governor, he (although offered a miserably insufficient salary, $500) set at once about the task assigned to him in the law creating his department. This was to ascertain the number of school districts; number of white youth between 4 and 21; number of each sex that had attended school during the year, and average time of such attendance; the time for which each school was kept open; the time it was supported by school fund or taxation from the period of its support by subscriptions; the amounts paid teachers in each district, township, and county; the source or sources from which such payments were derived; and the amounts paid for school-houses or repairs thereof.

His first report, presented to the legislature January 9, 1838, embodied, for that time, an immense amount of information on these points, showing 7,748 school districts; 468,812 children of school age; 146,440 attendant upon 4,336 public and 2,175 private schools, under 4,757 public school and 3,205 private school teachers, to whom were paid $434,765, derived from taxes, proceeds of school lands, subscriptions, &c.

To remedy defects which he had found and points out in his report, he suggested the outlines of a new school law, which was prepared in large accordance with his wishes, and passed March 7, 1838. This law, a great improvement upon all preceding ones, was meant to secure schools of at least 6 months' continuance under teachers properly examined and duly paid, with State, county, and township supervision, and the local management of amply empowered district directors. It provided for the support of the public schools by a county tax of 2 mills on the dollar, an optional and variable township tax, and a State distributable school fund of $200,000 annually; for the securing of good teachers by regular quarterly examinations of all candidates through the county examining boards; for due supervision, through a State superintendent chosen for 5 years, county auditors who should act as county superintendents, and township clerks who should, as township superintendents, visit every common school in their townships at least once in each year.

This law was the first that made provision for purchasing a lot or lots on which to erect a school-house; the first also that left to the discretion of a district the amount to be raised annually for such erection or for repairs, preceding ones having limited this to from $50 to $300.

MODIFICATIONS OF THE SYSTEM.

A fair school system being thus reached, it might have been hoped that it would be held to long enough to test its worth and get the new machinery into easy working order. But the patience necessary for such thorough testing is rarely exercised by a young and ardent population, and before a year was over Mr. Lewis, while recording great improvement from the law, had to listen to proposals for some changes in it. March 16, 1839, such changes were effected by an amendatory act which limited the optional and variable township tax for public schools to 2 mills on the dollar; allowed a choice between the building of a school-house and renting rooms for schools; struck out a clause as to the exclusive use of English in instruction, allowing directors to determine what language or languages should be used; and made provision for the opening of evening schools, as well as for attendance upon German schools; which last, with the other in respect to languages, was a concession to the German element, then becoming powerful among the people.

In 1840, March 23, came a change much less defensible. Mr. Lewis proposing to resign his superintendency, which had brought him great labor with but very slender pay, the opportunity was seized to save a hundred dollars by abolishing the office of State superintendent as a separate and independent one and merging it in that of the secretary of State, who was allowed a clerk at $400 annually for performance of its duties. A rapid decline in the efficiency of the school system was the immediate result, and for six years the life of it seemed to have departed. Then a new secretary, practically interested in education, the Hon. Samuel Galloway, set himself vigorously to work to reinfuse this life, and by active correspondence with school officers, attendance at educational meetings, and addresses to the people on the importance of the public schools, succeeded in effecting much improvement. He, happily for the system, continued for six years these efforts, the teachers and officers catching the infection of his zeal, and warming to their work as they had not done for years before. Largely through his influence the office of county superintendent, as a separate one from that of county auditor, was allowed, by act of February 8, 1847, to be established in 19 specified counties and three sets of associated counties; a permission repealed in 1853, being without the full results that had been hoped for, though these superintendents were to visit and examine common schools throughout their counties, to keep record of such visits and examinations, to address the people on the subject of education, to promote the formation of educational associations, and to do all within their power to secure to youth the best education possible.

By this same act of February 8, 1847, school libraries and teachers' institutes received at least permissive countenance. For the former, which had been authorized a year before, a small local tax was permitted to be levied. For the latter, county commissioners were allowed to make an appropriation from the school fund; this appropriation, by a subsequent amendment, being of $100 in a county, on the petition of at least forty teachers, and on their raising and paying over an amount equal to one half the sum petitioned for.

Mr. Galloway also aided in the establishment of schools for colored children, a class hitherto excluded from the benefits of the school system. A law passed February 24, 1848, and amended February 16, 1849, allowed the property of colored persons to be taxed for school purposes and the funds to be appropriated for the support of schools for colored children, where these should be separately kept, or for other schools, where colored children were permitted to attend with whites.

Boards of education for cities and villages, for the management of schools within them, with city boards of examiners for teachers, were further fruits of Mr. Galloway's good government, a law for them having been enacted February 21, 1849.

A HEAD TO THE SYSTEM.

With all the excellence of Mr. Galloway's administration, it was still felt by the friends of public schools that the State system ought to have at the head of it a practical educator, free from all other cares of office than those belonging particularly to school work. They agitated for this for several years, kept, at their own expense, an agent in the school field who might supply to some extent the State secretary's lack of service, and on March 14, 1853, had the great pleasure of accomplishing their aim. At that date a law was passed reorganizing the school system, taking away the oversight of it from officers absorbed in other work, and giving the management to a State commissioner of common schools, to township boards of education, and to local boards of directors, the township being made the one school district,* and the several minor local divisions becoming subdistricts. The State commissioner was to have the general oversight of all the public schools; the township boards, of central and high schools; the local directors, as before, of the elementary local schools, while city boards, with considerable powers, were continued.

Under this law, with occasional amendments, the schools were worked for the succeeding twenty years, when the growth of cities and the wisdom which such long experience brings, led to the new law of May 1, 1873, which, retaining substantially the official staff of 1853, added a State board of examiners; redistricted the State for school purposes into city districts of the first class, city districts of the second class, village districts, special districts, and township districts; and, in view of the growth of property values in the State, made the State tax in aid of the interest of the school fund 1 mill on the dollar instead of the 1¼ mills of 1853. This rate, which had been established in 1871, brings in now $1,620,572 additional to the $232,720 interest of the school fund, making, with the $6,136,238 raised by local taxes, and $615,604 from other sources, a grand total of $8,605,134 for annual support of public schools; in these schools there were, for 1875–'76, as enrolled scholars, 722,963 children between 6 and 21 years of age.

ADMINISTRATION OF THE SYSTEM.

The order of succession in the line of the State superintendency has been, as nearly as can be ascertained, as follows:

State superintendent of common schools, first by joint resolution of the legislature, afterward by law, Samuel Lewis, March 31, 1837, to March 23, 1840.

Secretaries of state and ex-officiis State superintendents: Carter B. Harlan, early part of 1840; William Trevitt, June, 1840, to March, 1841;† John Sloane, March, 1841, to March, 1844; Samuel Galloway, March, 1844, to March, 1850; Henry W. King, March, 1850, to January, 1852; William Trevitt, January, 1852, to January, 1854.‡

State commissioners of common schools: H. H. Barney, February 11, 1854, to February 11, 1857; Rev. Anson Smyth, February 11, 1857, to February 11, 1863; C. W. H. Cathcart, February 11 to November 11, 1863; Emerson E. White, November 11, 1863, to February 11, 1866; John A. Norris, February 11, 1866, to June 25, 1869; William D. Henkle, June 25, 1869, to a date in 1871, which he cannot now indicate; Thomas W. Harvey, from said date in 1871 to January 11, 1875; Charles S. Smart, present incumbent, elected for a term reaching from January 11, 1875, to January 14, 1878.

*Cities and villages of not less than 300 inhabitants were allowed to be organized into separate school districts, with the privilege of division into subdistricts.

† To fill a vacancy.

‡ From 1802 to 1850 secretaries were elected by joint ballot of the senate and house for terms of three years; since 1850, by the people, for terms of two years. From 1850 to 1854 the visitorial duties of a State superintendent were performed by Col. Lorin Andrews and Dr. Asa D. Lord, as agents of the State Teachers' Association.

ELEMENTARY INSTRUCTION.

THE COUNTRY SCHOOLS.

The State commissioner, since making his report of 1875, in which he considered at length the country school problem, has visited many of the country schools, has carefully examined into their condition, and is more than ever impressed with the importance of making some radical change in their organization and management. Little or no improvement need be expected in their condition until skilled and intelligent management is provided for them. The exhibition at the Centennial of the work of pupils of the city and village schools of the State indicated a degree of excellence second to no other exhibit of State or country, and this excellence is ascribed to the skilled management and supervision of the city and village schools. Such management and supervision are what the country schools need, and they can be given by the legislature without adding a dollar to the burden of the taxpayers. Such provision, moreover, would diminish by 75 per cent. the vast number of school officers, subject constantly and from necessity to official friction, and save to the State thousands of dollars now expended unintelligently and uselessly.—(State report, 1875–'76, pp. 11, 12.)

SUPERVISION.

The State school commissioner complied with the requirements of the law by visiting each judicial district in the State during the school year, lecturing before institutes, conferring with boards of education and other school officers, counselling teachers, visiting schools, &c. But with the small travelling fund allowed, it is impossible for him to gather correct and complete information, and to arrive at definite conclusions respecting the character and worth of the public school teachers of the State by meeting them at county institutes, and still more impossible when he can attend but a small number of these institutes. He should have the time and the means to visit annually, at least, representative schools of each county in the State. He could then form correct conclusions as to the character, capabilities, and efficiency of the teachers of the common schools; and the public would then know, at least better than now, for what it is paying so much money. The additional means for travelling necessary to enable the commissioner to visit representative schools in every county would be an inappreciable increase in the present cost, and the advantages resulting would be almost incalculable.—(State report, 1875–'76, pp. 30, 60, 61.)

FREE TEXT BOOKS FOR FREE SCHOOLS.

The commissioner has received communications from all quarters of the State, asking that something be done to relieve those sending children to the public schools from what is regarded as the burden arising from the cost and multiplicity of text books. The schools that are intended to be free to all, rich and poor alike, and for the maintenance of which the State expends between eight and nine millions annually, are made to cost their patrons a fourth as many more millions for text books. Of the million children of school age in the State nearly 200,000 are not enrolled in the public schools, and at least 200,000 of those enrolled attend so irregularly or so little as to obtain very little benefit from the schools. How many of such children are out of school or are irregular in attendance because their parents are unable to buy the books required is not known; but there is no doubt that many of the independent poor prefer to let their children stay out of school and engage in some honorable industry rather than accept the charity offered to the indigent by boards of education. And surely any influence which tends to keep the public schools from extending to all, rich and poor, the privileges of an education without cost, is in antagonism with the interests of the public, and should be removed by legislation.—(Report of State commissioner, 1875–'76, pp. 62, 63.)

DRAWING.

In 85 of the 88 counties of the State drawing is taught, but in most of the schools in a very rudimentary or crude manner. It is safe to say that instruction in drawing to any beneficial extent is not, in fact, given in any considerable number of the schools reporting drawing as a subject of instruction.—(State report, 1875–'76, p. 42.)

COLORED SCHOOLS.

The number of colored pupils attending public schools in 1876 was 7,192; a decrease from that of the previous year of 1,354. Number of teachers, 188; decrease, 22. The number of colored pupils pursuing academic studies in 1876 was only 898, against 3,136 in 1875; a decrease during the year of 2,238.—(State report, pp. 20, 21.)

PRIVATE SCHOOLS.

The importance of obtaining, as nearly as possible, an idea of the existing educational condition of the State induced the legislature in 1876 to make legal provision

for collecting and returning to the office of the State commissioner statistical information from all private schools of the State. In accordance with the law, blanks were sent to county auditors, who were requested to furnish principals and officers of private schools with them. It is presumed that county auditors performed their duty in this respect, and yet very few of the private schools of the State reported their statistics to the commissioner's office.

The total attendance upon private schools, as reported for 1876, was 9,141; a decrease during the year of 1,511. Number of teachers in 1876, 135; decrease, 76. Number of pupils pursuing academic studies in such schools in 1876, 269; in 1875, 739; decrease for the year, 470.—(State report, 1875–'76, pp. 21, 22.)

KINDERGÄRTEN.

Three Kindergärten, located in Cleveland, Toledo, and Worthington, all organized in 1875, report an aggregate attendance of 62 pupils, taught by the conductors of the schools and three assistants. Hours of daily session, 3. Ages of admission, from 3 to 7 years in two schools; in the other, from 3 to 6½ for the Kindergarten proper, with an advanced class of children from 6½ to 8 years of age.

CITY SCHOOL SYSTEMS.

AKRON.

Officers.—A board of education of 12 members, two from each ward, one-half the number going out of office each year, and a city superintendent of schools.

Statistics.—Population, 16,000; youth of school age, (6 to 21,) 3,964; pupils registered, 2,318; average number belonging, 1,846; average daily attendance, 1,754; per cent. of average daily attendance on the number enrolled, 75.6. Expenditures for school purposes, $64,216.58.

Remarks.—The school system comprises three general departments, primary, grammar, and high. The course of study prescribed for the primary department extends through four years, as does also that of the grammar department. For the high school there is a regular English course of three years, with Latin and Greek as optional studies, requiring longer time. Heretofore the interval between classes has been an entire year, and promotions from grade to grade have been made annually; but, in order to admit of more elasticity in the system, the course of study and classification have been so modified as to admit of semi-annual promotions. An increased attendance over last year is reported; the discipline is said to have been firm but mild; the tuition systematic, accurate, and just; the teachers able, faithful, and energetic. The high school is in a good and improving condition; number of pupils enrolled, 137; average daily attendance, 111.—(Report for 1876 of board of education and Superintendent of Instruction Samuel Findley.)

CHILLICOTHE.

Officers.—A board of education of 6 members, elected for terms of 3 years, two going out of office each year, and a city superintendent of schools.

Statistics.—Population, 12,000; youth between 6 and 21 years of age, 3,344; whole number enrolled in public schools, 1,837; in private schools, 400. Average number of teachers employed in public schools, 42. Increase during the year in total enrolment, 47; in monthly enrolment, 84.6; in average daily attendance, 88.6.

Remarks.—The schools are divided into primary, grammar, and high, each grade occupying 4 years. German is studied in all the grades, beginning with the alphabet in the lowest primary. The enrolment in the high school was 136; average daily attendance, 107; number graduated, 24.—(Report for 1875–'76 of board of education and Superintendent G. N. Carruthers.)

CINCINNATI.

Officers.—A board of education of 50 members, 2 from each ward, serving for 2 years, one-half being changed each year, a union board of high schools, and a city superintendent of schools.

Statistics.—Population of the city, about 267,000; youth between 6 and 21 years of age: white, 86,886, colored, 1,956; total, 88,842. Pupils enrolled in district schools: white, 23,808, colored, 871; in intermediate schools, white, 4,302, colored, 112; in high schools, white, 886, colored, 38; in normal schools, 78; in school for deaf mutes, 20; in evening schools, 4,237; grand total of pupils attending public schools, 34,352. Teachers, 580, of whom 106 were men. School buildings in use, 41; school rooms in use, 554; rooms not in use, 18. Square feet of floor to each pupil in daily attendance, 14; cubic feet of space to each pupil, 200. Average number of pupils belonging in the district, intermediate, high, and normal schools: white, 22,622, colored, 638; total, 23,260; average number in daily attendance, 22,406. Per cent. of daily attendance estimated on enrolment: in white schools, 74.5; in colored schools, 59.3; general average, 73.6.

The schools, as above indicated, are of three grades, known as district schools, inter-

mediate schools, and high schools. There are 31 district schools, 6 intermediate ones, besides 10 intermediate departments in district schools, and 3 high schools, with 1 normal school.

Remarks.—While the increase in the number of pupils enrolled during 1875–'76 over the number for the previous year was 981, the increase in the average number belonging was only 472, and in the average attendance, 477. This difference is due to the prevalence of small-pox during the greater part of the school year. It is estimated that about 15,826 pupils attended private and church schools, and that 450 belonged to charitable and reformatory institutions, making a total attendance upon all schools (exclusive of pupils in business colleges or higher institutions) of 49,935. Of these, about 42,984 were between 6 and 14 years of age, leaving about 6,400 children between those ages who did not attend any school.

The advancement in the evening schools, especially in the evening high, is said to have been very creditable. The enrolment and average attendance have increased 44 per cent. during the year in these schools. In the high there was an attendance of 980 different pupils, (of whom 101 were women,) taught by 14 instructors.

German is taught by 119 teachers in all the grades, and in all but one of the schools. The new course of study does away with translation in the district schools, and substitutes conversational lessons on familiar objects. This study is pursued by 29 per cent. of the pupils in the high schools, by 30.6 per cent. in the intermediate schools, and by 56.3 per cent. in the district schools.

Special attention is given, and with good results, to instruction in penmanship, music, and drawing.

The three high schools — two of them for white and one for colored pupils, having in all an average attendance of 808 pupils — graduated 77 during the year; 15 more than in 1874–'75. There are three courses, classical, technological, and general, each occupying 4 years. The first secures a preparation for college; the second, for special university courses; the last is for those who do not intend to go to higher schools. German, French, Greek, and Latin are taught, besides all the usual higher English branches.

The normal school reports an enrolment of 78, and an average attendance of 53 students, of whom 31 were graduated during the year. The general term for graduation is a year and a half. Nearly 90 per cent. of the students in the English department are high school graduates. Students are admitted to the school on diplomas from the high school, on teachers' certificates, and on special examinations.

In addition to the required annual institute — which was in session a week previous to the opening of the schools, and which every teacher must attend, on pain of reduction of salary — the teachers of the city have the benefit of monthly meetings, which are kept up for consultation upon school affairs and for mutual improvement.

A school for deaf-mutes was opened in November, 1875, by the public school authorities. The method of instruction is the sign language and the manual alphabet.—(Report for 1875–'76 of City Superintendent of Schools John B. Peaslee.)

CLEVELAND.

Officers.— A board of education of 18 members, one from each ward, elected for a period of two years, one-half the number going out of office each year; and a board of examiners of teachers, consisting of 6 members who serve 3 years, one-third retiring each year. The board of education appoints a city superintendent of schools, who is also secretary of the board of examiners.

Statistics.— Population of city about 138,000; youths 5 to 21 years of age in 1875, 48,561; in 1876, 47,043, of which latter number 422 were colored. Pupils enrolled in public schools, (1875–'76,) 20,771; average number belonging, 15,007; average daily attendance, 14,069. Per cent. of punctual attendance on enumeration, 45; on number registered, 68; on average number belonging, 94. Colored persons attending public schools, 266; not attending any school, 156. Pupils attending private and church schools, 8,938; children not attending any school, 18,399. Public schools in the city, 42; teachers, including 4 special teachers and 5 special superintendents of primary instruction, 335. Expenditures for school purposes, $410,846.36.

Remarks.—The system comprises primary, grammar, and high schools, a normal school, and the public library. The primary and grammar schools each comprise 4 years in their course. The high schools offer a classical course, a Latin and English course, a German and English course of 4 years each, and an English course of 3 years. The establishment of this 3 years' course, however, has not, it is thought, been beneficial to the schools. It does not represent three-fourths as much work as either of the 4 years' courses, and is not worth to the pupil more than half as much; and yet, since its graduates are admitted to the normal school, 9 out of 10 pupils expecting to teach take this course as the shortest way to the salary of teacher. The total enrolment of pupils in higher schools was 671; average number belonging, 584; average daily attendance, 561.

In the normal school there are two classes, one of them pursuing a two years' and the

other a one year's course. The conditions of admission have this year been modified, so that graduation from the 4 years' course in the high school is necessary to admission to the senior class. The whole number registered in the school was 51, the average number belonging about 43, and the average daily attendance about 42. Thirty were graduated.

The number of volumes in the public library was 22,769, and there were drawn on an average 698 volumes for every working day. A reading room connected with the library is supplied with the most important newspapers and periodicals, and is visited each day by an average of 492 readers.

Great attention is given to the studies of drawing and penmanship, special teachers being employed in these branches and in music. The great success which has attended the study of drawing here is ascribed to the plan of instruction followed, which was prepared by the teacher, Mr. Aborn, and differs greatly from systems most in vogue, although it is not without a precedent, being, in several important particulars, like that followed in the Gymnasia and trade schools of Prussia. It rejects all copying from the flat as being unfavorable to an attainment of the ability to represent readily and truly the real object. The plan begins with perspective or object drawing, then takes up conventional drawing — the expression of some or all the characteristics of the forms of objects, a kind of drawing used principally in ornamentation — and finishes with geometric drawing, or projection.

The pupils of the primary and grammar schools are taught music in a series of progressive lessons from the first to the eighth year, a course which is continued for one year in the high school.

The German department comprised, 1875-'76, 158 classes, of which 87 were in primary, 60 in grammar, and 11 in high schools. The average number of pupils engaged in the study was 5,549, about one-third of all in the public schools; an increase of 500 pupils over the previous year.—(Report of the board of education for 1875-'76.)

COLUMBUS.

Officers.—A board of education of 11 members, whose term of office is 2 years; a clerk of the board, a city superintendent, and board of examiners of 3 members, including the city superintendent.

Statistics.—Population of the city, 44,799; youth between 6 and 21 years of age, 12,686: pupils registered in the public schools, 6,797; in the night schools, 437; in private and parochial schools, 1,258; whole number receiving instruction, 8,492. Teachers: men, 14; women 114; total, 128. Schools, 107. Valuation of school property, $561,343. Cost of tuition per capita on number of pupils registered, $11.85; on average number belonging, $14.88; on enumeration of youth between 6 and 21 years of age, $6.60. Total receipts for public schools, $249,064.48; expenditures, $162,260.70.

Remarks.—The schools are divided into ungraded, primary, grammar, and high, the three last embracing a course of four years each. Owing to the persistent efforts of the teachers there has been a continued decrease of tardiness; there being, out of an enrolment of 6,797 pupils for the year, 4,148 who were never tardy.

The number entering the high school is increasing year by year although the standard of scholarship for admission is rigidly maintained. The enrolment last year was 368, of whom 106 were boys and 262 girls; the average number belonging, 316; and the average attendance, 305; an increase in 4 years of nearly 90 per cent. The new English course (lasting 3 years) has not met with the great favor predicted for it by its friends. It is taken by but few, the large majority preferring a course involving the study of either German or Latin. As a general rule, the pupils who study a foreign language surpass in their other studies those who do not.

Three evening schools were open during the year, having an enrolment of 303 pupils, and an average attendance of 245. The enrolment was considerably less than that of the previous year, but the average attendance was greater and the cost per capita less than one-half. The instruction was oral and eminently practical; yet only a small number could be influenced to make any personal effort for themselves outside of the time spent with the teacher. The few who attended regularly were benefited, but to the greater number, whose presence depended upon the absence of amusements outside, the school was not profitable.

The free evening art school made good progress, considering the disadvantages under which it labored, such as the poor arrangement of light and inconvenient desks. The students worked enthusiastically. The number enrolled during the term was 117: men, 79; women, 38; average number enrolled, 52; average attendance each evening, 39. The students represented 22 different occupations, the greater number being teachers. Average age of students: men, 21; women, 25.—(Report of board of education, 1875-'76, R. W. Stevenson, city superintendent public instruction.)

DAYTON.

Officers.—A board of education of 22 members, one-half the number going out of office each year, and a city superintendent of instruction.

Statistics, 1875.—Population of city, 35,000; youth, 6 to 21 years of age, (census of 1874.) 10,483; number registered in public schools, 5,238; average daily attendance, 3,610; number of teachers, 102; 17 men and 85 women.

Remarks.—The system includes district, intermediate, high, normal, and night schools. The course of instruction in the district schools lasts 7 years, and comprises as many grades. The intermediate or eighth grade is preparatory to the high school course which follows it, and embraces four years. In 1875 there were 238 pupils registered in the high school, the average daily attendance being 188. In the normal school there was an enrolment of 15, with an average attendance of about 12. The night schools numbered about 300.

Making allowance for an attendance upon private and church schools of 1,377 pupils, Superintendent Hancock estimates that over 2,000 youth between 6 and 16 years of age, or nearly 24 per cent. of the whole number enumerated of that age, did not cross the threshold of a school-house for the entire year. He therefore strongly urges upon the legislature some action looking towards the rescue from degradation and crime of this class of youth. The two things specially needed, in his opinion, are an efficient truancy law and a city reform school.—(Report of board of education and of Superintendent John Hancock for 1875.)

FREMONT.

Officers.—A board of education of 6 members elected for terms of three years, one-third going out each year, and a city superintendent of schools.

Statistics, 1874-'75.—Estimated population of the city, 6,500; pupils enrolled in public schools, 950; average weekly enrolment, 710; average daily attendance, 643; per cent. of average attendance on average weekly enrolment, 92. Number of schools, 14; of regular teachers, 17; special teachers, 2. Cost of the public schools per pupil on the total enrolment, $13.90; on the average daily attendance, $20.54; total expenditures for school purposes, $16,535.80.

Remarks.—A slight increase in the enrolment from the previous year is reported, with a marked improvement in the regularity of attendance. The different grades of schools embrace 8 primary, 4 grammar, and 1 high, with 1 German-English school. In the high school there were 81 pupils registered, the average attendance being 53.—(Report of board of education and Superintendent W. W. Ross.

HAMILTON.

Officers.—A board of education of 8 members, 2 for each ward, and a city superintendent of schools.

Statistics.—Population in 1870, by the census, 11,081; youth in the city, 6 to 21 years of age, 5,639. Number of pupils enrolled in public schools, 1,709; average daily attendance, 1,241. Number enrolled in private and parochial schools, 1,022. Total number under instruction, 2,731. Number of teachers employed, 32. Expenditures for school purposes, $46,172.02.

Remarks.—The three departments, primary, intermediate, and high, are each divided into 4 grades, one of which comprises a year, making a complete course of 12 years. A course of instruction for the German-English classes has just been published, extending over a period of 6 years, the English instruction given in these being the same as that given in the regular English classes. Music and drawing were taught in every grade during the year, the latter with excellent results. The classes in the high school are under efficient instruction, and the number of pupils is greater than at the time of any previous report. The total enrolment in this school during the year was 119; average daily attendance, 96. Latin is studied, and French and Greek may be, if desired.

It is believed that the enumeration of school population is excessive, and that therefore the disparity between this and the attendance, as shown by the figures, is considerably larger than the facts would justify.—(Report for 1875-'76 of City Superintendent Alston Ellis.)

SANDUSKY.

Officers.—A board of education of 10 members, elected for terms of 2 years, a part going out each year, and a city superintendent of schools.

Statistics, 1874-'75.—Total receipts for school purposes in 1875, $65,492.14; expenditures, $54,075.69; balance on hand, September, 1875, $11,416.45. Population, 17,000; enrolment in the public schools, 2,459; average daily attendance, 1,697. Cost of education per pupil, on the basis of average number belonging, $15.50.

Remarks.—The schools of the city are graded into primary, grammar, and high, each division embracing 4 years. A training school for teachers was established in 1874. A steady improvement is reported in the methods employed by the teachers. Very few text books are used in the first six years of school. Geography, for instance, is taught from wall maps and globes during the first six years. In the seventh year a text book is introduced and finished. Music, drawing, and German are successfully taught.—(Report of board of education and Superintendent George J. Anderson for 1874-'75.)

STEUBENVILLE.

Officers.—A board of education of 5 members and a city superintendent of schools.

Statistics.—Population of city, 13,500; youth 6 to 21 years of age, 4,732. Number registered in public schools, 2,208; average daily attendance, 1,624. Number of teachers employed within the year: men, 7; women, 32; total, 39. Enrolment in evening school, 55; average attendance, 21. Enrolment in the high school, 123; average daily attendance, 108.

Remarks.—There has been a steady increase in the number attending the upper grades. The classes in the high school have been so arranged that pupils have now a choice of an English or classical course. In connection with this school, a training class for teachers has been successfully carried on since 1873. German has been taught during the last 5 years, but, in consequence of the limited time at the disposal of the special teacher, in the grammar and high schools alone. The attendance in the evening school was neither large nor regular enough to encourage the belief that much good was accomplished.—(Report of Steubenville public schools, Martin R. Andrews, superintendent, 1876.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

Only 5 normal schools report statistics for 1876 to the State commissioner, against 8 in 1875. There was an attendance upon these 5 schools of 627 young men and 421 young women; total, 1,048. Graduates, 93 young men and 69 young women. Regular instructors, 28. These figures show an increase over those reported by the same schools in 1875 of 3 teachers and 52 students.—(State report, 1875–'76, pp. 26, 27.)

Seven others, beside the 5 above referred to, report to this Bureau 35 instructors; of the 7, 5 report 1,111 normal students, 2 of them not reporting the number of students.

TRAINING SCHOOLS.

The Cincinnati training school reports 78 young women in attendance for 1876, the same number as for 1875, and 31 graduates, 10 less than for 1875. The number of teachers remains the same as last year; the conditions of admission and graduation are the same, and the course of study is unchanged.

The Cleveland training school reports the same number of teachers as were employed in 1875. Enrolment, 50 young women, 1 more than the previous year; graduates, 30, 4 more than in that year. Course of study, professional. Only those whose academic training equals the high school course of Cleveland are admitted. The 4 years' course in the high school admits to the senior class in the training school; the 3 years' course to the junior class. The course is, therefore, either 1 or 2 years, according to previous preparation.

The Dayton training school reports 2 teachers, one more than in 1875, with 16 young women in attendance, (5 less than the previous year,) and 14 graduates, 6 more than in 1875. The course of study is strictly professional.

The Sandusky training school reports 1 teacher employed, 16 young women in attendance, and 6 graduates. The course of study lasts 2 years.—(State report, 1875–'76, pp. 39, 40.)

TEACHERS' INSTITUTES.

Teachers' institutes were held in 85 different counties during the year. County teachers' associations held and reported 92 meetings. The number of members of county teachers' associations attending county institutes for 1876 was 10,304, an increase of 176 over the number for 1875. The custom of employing lecturers from abroad—teachers of known ability and successful experience, but who frequently know little of the peculiar characteristics of the people or the especial wants of the teachers before whom they lecture—still prevails to some extent; but the tendency to secure teachers who have taught successfully in the county where the institute is held appears to be increasing.

These county teachers' associations indicate a disposition on the part of the members to make such improvements in the modes of teaching and such preparation to teach as public sentiment demands. They serve a good purpose, and are a necessity in the absence of any provision on the part of the State for the training of teachers.—(State report, 1875–'76, pp. 28, 29.)

EDUCATIONAL JOURNAL.

The Ohio Educational Monthly, under the editorship of the Hon. W. D. Henkle, has continued during 1876 its useful issues from the press at Salem, affording teachers much excellent instruction, as well as local and general information.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of the 700,000 pupils enrolled in the public schools of the State, 24,000, or about 3½ per cent., are enrolled in the high schools, and not more than one-half per cent. of those enrolled in the public schools complete the high school studies. Of the 23,000 public school teachers, employed at a cost of $5,000,000, 700, or about 3 per cent., are employed in high schools, and receive $500,000, or 10 per cent. of the entire sum. Of the 13,000 school-houses in the State, 140, or about 1 per cent., are distinctively high schools, and are worth $3,000,000, or about 15 per cent. of the whole value of public school property in the State. In other words, 15 per cent. of the value of all the school property, and 10 per cent. of the money paid teachers, are expended to provide high school instruction for 3½ per cent. of all public school pupils, or 2 per cent. of all the youth of school age in the State.

To those who have given the subject of public education careful consideration, the question has arisen, Are the results derived from the high schools of sufficient worth to the public to justify the support of these schools at public expense? Does the value of the high school to the general public, in its influence upon lower schools, in its development of the pupils attending, in the practical training it gives to its members—remembering that much the greater number of those who attend and graduate from the high schools are girls, and that, after all, it is practical, self-reliant men and women the public schools should develop — does the worth of the high schools, in this view, justify the expenditure for them of 15 per cent. of the public school funds, when but 3½ per cent. of all the pupils enrolled ever enter them, and but ½ per cent. ever graduate from them? The educators of the country are almost a unit in their opinion respecting these questions. After some years of intelligent observation and practical trial of the high school system, they have almost universally answered them in the affirmative.—(State report, 1875–'76, pp. 45–47.)

PRIVATE SECONDARY SCHOOLS.

In 4 schools for boys, 8 schools for girls, and 28 for both sexes, outside of the public school system, there have been reported to this Bureau, 4,354 pupils under 239 teachers. Of these, 462 are in classical studies, 674 in modern languages, 168 preparing for a classical course in college, and 125 for a scientific course. Drawing is taught in 10 of these schools, vocal music in 28, and instrumental music in 28. Chemical laboratories are reported by 18, and philosophical apparatus and libraries of 18 to 3,000 volumes by 23.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Four preparatory schools and 28 departments report a total of 85 teachers, 3,021 students, of whom 1,127 were preparing for classical courses, and 826 for scientific. Of the 4 preparatory schools all but 1 report chemical laboratories, apparatus for the illustration of natural philosophy, and gymnasiums, and 2 libraries, aggregating 750 volumes.

BUSINESS COLLEGES.

Twelve business colleges report 41 teachers and 1,965 students, of whom 143 were studying phonography, 47 telegraphy, and 101 German. The common English studies and correspondence were taught by 11; penmanship and book-keeping by all; the higher mathematics by 2; banking by 6; commercial law by 9; political economy, life insurance and telegraphy by 2; and phonography by 5. Four report libraries ranging from 50 to 500 volumes, and aggregating 1,250.

SUPERIOR INSTRUCTION.

COLLEGES AND UNIVERSITIES.

The State commissioner received reports for 1876 from 25 universities and colleges, (one more than in 1875,) having a total of 218 regular teachers and 4,533 students. In 1875 the attendance, reported by 23 colleges, was 5,402. In 1876, 23 colleges reported 2,333 students pursuing a regular course of study against 3,063 reported by 22 in 1875. In 1876, 24 report 307 graduates in regular courses, while in 1875 there were 357 reported by 21. The aggregate yearly income of 19 colleges was reported in 1876 as $185,908; in 1875 this item was reported by 20, and amounted to $239,675.—(State report, pp. 27, 28.)

Antioch College, Yellow Springs, (non-sectarian,) admits both sexes and provides preparatory, regular collegiate, and partial courses. Degrees are conferred only on graduates from the regular course.—(Catalogue, 1875–'76.)

Baldwin University, Berea, (Methodist Episcopal,) for both sexes, has preparatory, collegiate, and pharmacy departments, the collegiate embracing classical and scientific

courses. The students in the departments of Greek, the modern languages, and music are instructed by the professors in German Wallace College, while the students of that college enjoy similar privileges in Baldwin University.—(Catalogue, 1875–'76.)

Denison University, Granville, (Baptist,) is exclusively for young men, and includes preparatory and collegiate departments, the latter with classical, scientific, and elective courses.—(Catalogue, 1876–'77.)

Farmers' College, College Hill, (non-sectarian,) admits both sexes, and includes preparatory, collegiate, agricultural, and English courses. Drawing and vocal music are also attended to.—(Catalogue for 1876.)

Geneva College, West Geneva, (Reformed Presbyterian,) admits both sexes to its classical, normal, and scientific courses. There are also classes in instrumental music and commercial book-keeping.—(Catalogue, 1875–'76.)

German Wallace College, Berea, (Methodist Episcopal,) admits both sexes, and embraces collegiate, preparatory, and theological departments, the former with classical and scientific courses. There is also an English course for Germans and a German course for Americans.—(Catalogue, 1875–'76.)

Heidelberg College and Theological Seminary, (Reformed,) is for both sexes, and embraces collegiate, preparatory, and theological departments. Special facilities are afforded for the study of the German language.—(Catalogue, 1875–'76.)

Hiram College, Hiram, (Disciples,) embraces preparatory, biblical, classical, Latin and scientific, scientific, ladies', teachers', and commercial courses. Both sexes are admitted.—(Catalogue, 1876.)

Kenyon College, Gambier, (Protestant Episcopal,) is for the education of young men exclusively, and includes preparatory, collegiate, and theological departments.—(Catalogue, 1875–'76.)

Marietta College, Marietta, (non-sectarian,) embraces preparatory and collegiate departments, and appears to be exclusively for young men.—(Catalogue, 1874–'75.)

McCorkle College, Bloomfield, (Presbyterian,) is for both sexes, and includes preparatory, academic, and scientific departments. Its principal design is to qualify young men for the study of theology.—(Catalogue, 1874–'75.)

Miami Valley College, near Springboro', is under the care of Friends. Both sexes are admitted, not only as students, but as members of the faculty. Departments, preparatory and collegiate. A special feature here is the union of industrial with academic training. Young men are employed and instructed in farming and in mechanical occupations; young women in housework.—(Catalogue, 1876–'77.)

Mt. Union College, Mt. Union, (non sectarian,) embraces in its plan general and special courses, the former including an ancient and modern classical course, a liberal literature and arts course, a philosophical, and a scientific course, each arranged for 4 years' work. The special courses embrace preparatory, normal, music, fine arts, and commercial or industrial courses. The distinctive features of the college are entire liberty in the choice of studies; prominence given to practical studies; the special courses; the religious influence, Christian, but not sectarian nor partisan; and equal privileges and honors to women, not only as students but in the faculty. Self government by students is a rule of the institution, and the privileges enjoyed are offered only on condition that it is observed.—(Catalogue, 1876–'77.)

Oberlin College, Oberlin, (Congregational,) embraces departments of theology, of philosophy and the arts, and of preparatory instruction; also, a conservatory of music. The department of philosophy and the arts includes classical and scientific, literary, and select courses.—(Catalogue, 1876–'77.)

Ohio University, Athens, (non-sectarian,) includes preparatory and collegiate departments, the latter providing classical, scientific, and select courses.—(Catalogue, 1875.)

Ohio Wesleyan University, Delaware, (Methodist Episcopal,) has preparatory and collegiate departments; the latter with classical and scientific courses. There is also a teachers' course of 2 years.—(Catalogue, 1875–'76.)

One Study University, Scio, (Methodist Episcopal,) embraces preparatory and collegiate studies, and admits both sexes. The distinctive feature of this college is its plan of study, which takes up and completes one branch at a time.—(Catalogue, 1874–'75.)

Otterbein University, Westerville, (United Brethren,) embraces classical, scientific, ladies', and preparatory courses, the latter with classical, scientific, and English departments.—(Catalogue, 1876–'77.)

St. Xavier's College, Cincinnati, (Roman Catholic,) embraces 4 departments, the collegiate, academic, commercial, and preparatory, including, besides the common English branches, a study of the doctrines and evidences of the Catholic religion, logic, metaphysics, ethics, astronomy, natural philosophy, chemistry, mathematics, rhetoric, composition, elocution, history, book-keeping, Latin, Greek, German, French, and vocal and instrumental music.—(Catalogue, 1875–'76.)

University of Cincinnati, Cincinnati, (non-sectarian,) was established by the munificence of Charles McMicken, aided by the city of Cincinnati, under legislative enactments, and incorporated in 1870. According to the conditions of Mr. McMicken's gift all its privileges are open to women. The conditions of admission, courses of study,

standard of excellence required, and times and places of lectures are the same for both sexes. The university is devoted exclusively to higher education, and has no preparatory school. Three courses of study are open, the classical, scientific, and civil engineering. The system is largely elective, prescribed studies occupying the first year only.—(Catalogue, 1876–'77.)

University of Wooster, Wooster, (Presbyterian,) provides collegiate, preparatory, and medical departments, the former with classical, philosophical, and scientific courses. Superior advantages are offered to earnest young women who desire thorough intellectual culture, and who prefer advanced education to merely artistic or social accomplishments. The coeducation of the sexes has proved unquestionably successful here. Young women have been able in all respects to master the difficulties of the college course and to maintain the highest rank, and their presence is a constant stimulus to study, to order, and to a courteous bearing on the part of the young men.—(Catalogue, 1875–'76.)

Urbana University, Urbana, (New Church,) was founded in the interests of the New, or Swedenborgian, Church, and its controlling aim is to combine with thorough scientific and literary culture a knowledge of the uses and duties of the Christian life. The courses of study are preparatory, collegiate, and theological.—(Catalogue, 1875–'76.)

Western Reserve College, Hudson, (non-sectarian,) embraces academical, preparatory, and medical departments. Natural theology is studied in the collegiate course in connection with metaphysics.—(Catalogue, 1876–'77.)

Wilberforce University, near Xenia, (African Methodist Episcopal,) reported in its catalogue of 1872–'73 (the latest at hand) preparatory, classical, scientific, normal, theological, and law departments.

Wilmington College, Wilmington, (Friends,) is for both sexes, and embraces preparatory and collegiate departments, the latter having scientific and classical courses.—(Catalogue, 1875–'76.)

Wittenberg College, near Springfield, (Evangelical Lutheran,) includes preparatory, collegiate, and theological classes. A large majority of the students in attendance are candidates for the gospel ministry.—(Catalogue, 1875–'76.)

Xenia College, Xenia, (Methodist Episcopal,) embraces primary, preparatory, collegiate, and normal departments. Both sexes are admitted to the classes and to the faculty.—(Catalogue, 1875–'76.)

Ohio College Association.— Beyond the fact that a number of gentlemen, representing various colleges, met at Delaware during the holiday week of December, 1876, no account of this association for that year has reached the Bureau.

COLLEGES FOR WOMEN.

Thirteen such institutions have reported to the Bureau of Education, for 1876, a total of 139 teachers and 1,416 pupils, of whom 207 were in preparatory departments under 5 teachers, besides those in the college faculties. Of the collegiate students, 908 are reported as in the regular course, 101 in partial courses, and 14 in graduate courses. The remainder are unclassified. All the 13 teach vocal music; 12 teach instrumental also, with French and Italian; 4 teach Spanish; 1 Italian, and 1 Anglo-Saxon in addition to the other languages mentioned. Eight teach drawing, and 6 painting also. Ten report chemical laboratories; 9, philosophical apparatus; 5, art galleries, and 4 collections in natural history.—(Returns to Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Ohio Agricultural and Mechanical College, organized in 1870 and located at Columbus, now embraces in its course of study 13 departments, namely, physics and mechanics; chemistry; zoölogy; botany; geology; agriculture; mathematics; civil engineering; English, French, and German languages; Latin and Greek languages; political economy and civil polity; mechanical and free hand drawing, and military science and tactics. The degrees conferred are bachelor of arts, bachelor of science, and civil engineer. Students who are candidates for degrees must pursue a prescribed course of study during the first two years. In the subsequent college work a large liberty of choice is accorded. The full course covers 4 years. The year 1876 was one of steady gain and growth for the institution. The number of students has increased, the grade of scholarship advanced, and students are rapidly falling into the regular courses of study.—(Report to board of trustees, 1876.)

The Agricultural Department of Farmers' College embraces departments of physics, sciences, and zoölogy, including lectures on the effect of climate on plants and animals, the nature of soils and fertilizers, horticulture, arboriculture, pomology, cereals, and insects.—(Catalogue, 1876.)

The Toledo University of Arts and Trades was organized in 1872 for the purpose of furnishing artists and artisans with the best facilities for a higher culture in their professions and in related sciences. The only school as yet organized is one of design. It has 31 pupils, 20 men and 11 women.—(Return, 1876.)

THEOLOGY.

The Theological Department of the Educational Institute of the Mennonite Community, at Wadsworth, includes the study of Bible history, biblical knowledge, exegesis, dogmatics, symbolism, church history, catechism, and delivery of sermons.—(Circular, 1876.)

Mt. St. Mary's Seminary of the West (Roman Catholic) provides preparatory and theological departments, the former of 4, the latter of 3 years. In order to gain admittance into the theological department, the student must have satisfactorily completed his philosophical studies.—(Catalogue, 1874–'75.)

Union Biblical Seminary, (United Brethren,) at Dayton, has a full course of 3 years, on completion of which students receive the diploma of the seminary. Applicants for admission must be college graduates, or must have otherwise qualified themselves to pursue the course with advantage.—(Catalogue of seminary, 1876.)

The Theological Department of Kenyon College (Protestant Episcopal) provides a 3 years' course of instruction, to which are admitted only graduates of colleges and others who can pass a satisfactory examination in the Latin language, in classical and Hellenistic Greek, and in the general principles of natural, intellectual, and moral philosophy, and of rhetoric.—(Catalogue of college, 1875–'76.)

The Theological Department of Oberlin College has a 3 years' course of study, and requires for admission a college diploma or a satisfactory examination in Greek, English, and rhetoric, modern history, and mental and moral philosophy.—(Catalogue of college, 1876–'77.)

The Theological Department of Urbana University includes in its course of study the Latin, Greek, Hebrew, and Syriac languages, biblical antiquities and exegesis, geology and natural history, history of philosophy, church history, and a systematic course of theological reading.—(College catalogue, 1876.)

The Theological Department of Wittenberg College has a course of study covering 2 years, and comprising exegetical theology, historical theology, systematic theology, and practical theology.—(College catalogue, 1875 and 1876.)

LAW.

The Law School of the Cincinnati College provides a course of 2 years of 7 months each. No particular course of previous study is required for admission, nor is any examination, license to practise, or certificate of age required.—(Catalogue of school, 1876–'77.)

MEDICINE.

The Medical College of Ohio, Cincinnati, has a 3 years' course of instruction. The student, in order to graduate, must have attended 2 full courses of lectures in one or more of the hospitals connected with the college, and must have engaged in practical anatomy during at least one session. A graded system of study has been established, which, however, is entirely optional.—(Catalogue and announcement, 1875.)

Miami Medical College of Cincinnati, in its plan of instruction, combines clinical and didactic teaching, with frequent examinations. Special instruction is given in the duties of medical examinations for life insurance. A progressive course has been arranged, and, though optional as yet, is considered by the faculty far preferable to the old plan.—(Announcement, 1876–'77.)

Cleveland Medical College.—The candidate for graduation must have studied medicine under a regular physician for 3 years, and have attended 2 full courses of study in schools of good standing, the last of which must have been at this school. Graduates of literary schools are admitted to examination after 2 years of medical study.—(Catalogue, 1875–'76.)

The Medical Department of the University of Wooster combines with the ordinary didactic teaching daily and weekly examinations and reviews. The candidate for graduation must have studied 3 years in the office of some respectable practitioner, and have attended at least 2 courses of lectures, the last of them here.—(Catalogue, 1876–'77.)

Columbus Medical College has a 3 years' course of study, 2 of them in the college, the other with some reputable practitioner. In examining candidates for degrees the faculty is assisted by a board of censors, composed of members of the profession not connected with the college.—(Announcement, 1876–'77.)

Starling Medical College has a 3 years' course of study, including 1 year of study with some reputable practitioner. In order to graduate, students are required to attend 2 full courses of medical lectures, 1 of which shall be at this institution, and 1 course of practical dissections.—(Catalogue, 1875–'76, and special return.)

Cincinnati College of Medicine and Surgery.—The student, in order to be graduated at this college, must study medicine for 3 years with a regular physician of good standing. He must attend 2 full courses of lectures, the last of them in this college, and at least 1 course of dissections under a demonstrator of anatomy.—(Catalogue, 1876–'77.)

The Eclectic Medical Institute, Cincinnati, *The Pulte Medical College*, Cincinnati, and the *Homœopathic Hospital College*, at Cleveland, all report a 3 years' course of instruction.—(Special returns, 1876.)

DENTISTRY.

The Ohio College of Dental Surgery, Cincinnati, requires for graduation 2 full years of pupilage, part, at least, with a reputable dental practitioner and good teacher, and 2 complete courses of lectures in a dental college. A good English education is not an absolute requirement for admission, but it is greatly desired by the faculty that the students should have received such a training.—(Announcement, 1875–'76.)

PHARMACY.

The Cincinnati College of Pharmacy, in a special return, reports 4 years as its full course of study, which, in a printed circular, is explained to be 2 full courses of lectures in a regular college of pharmacy, the last of which shall be in this college, and an experience of 4 years in the retail drug business.

SPECIAL INSTRUCTION.

OHIO INSTITUTION FOR THE EDUCATION OF THE DEAF AND DUMB, COLUMBUS.

The buildings for this institution, of brick, trimmed with stone, were erected at a cost of $650,000. Their floors cover a surface of 4 acres, and afford almost every convenience that could be desired for instruction, work, and comfort. Ten acres of land are included in the school property, which is valued at $800,000 in all.

The number of instructors for 1876 was 23, including 5 semi-mutes. The pupils under instruction numbered 490; males, 274; females, 216. Number since foundation of the institution, 1,587. The branches taught are the same as in graded city schools, with the aid of a small chemical laboratory, of some philosophical apparatus, of a museum of natural history, and a library of 3,000 volumes.

About three-fourths of the boys work in the industrial department of the school, which includes a shoeshop, printing office, and book bindery. The remaining fourth occupy the intervals between their study hours with household avocations and needful recreation. A portion of the older girls are employed at these intervals in the book bindery, and the others in various branches of housework. The opening of the shoeshop and bindery on Saturdays for voluntary paid labor has been tried, with good results.—(Report for 1875 and return for 1876.)

OHIO INSTITUTION FOR THE EDUCATION OF THE BLIND, COLUMBUS.

The number of instructors and other employés here in 1876 was 54, 5 of them being blind. The number of pupils was 156; the whole number since the opening of the school in 1837–'38 being given as 907. In addition to the literary studies—which embrace the ordinary branches of an English education, with of course the addition of music—such industrial occupations as broom making, cane seating, bead work, hand and machine sewing, knitting, and piano tuning are engaged in as a means to eventual self support.—(Return for 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

Arrangements were made by the executive committee of the State Teachers' Association for holding the usual annual meeting of that organization at Put-in Bay, June 27, 28, and 29, but it was postponed in order to give the teachers of the State an opportunity to visit the Centennial Exhibition.—(State commissioner's report, pp. 38, 39.)

NORTHWESTERN OHIO TEACHERS' ASSOCIATION.

This association met for its seventh annual session at Wapakoneta, December 26 and 27, 1876. The president, J. A. Pittsford, of Mt. Blanchard, delivered an inaugural address on "Reading," which was discussed by J. D. Flenner, of Cairo, H. S. Lehr, of Ada, and J. S. Staley, of Bluffton. W. F. Torrence, of St. Mary's, read a paper on "The wants of country schools," which was discussed by H. S. Lehr and others. C. F. Palmer, of Findlay, read a paper on "The study of English," which was discussed by several members. The other papers read were by S. F. DeFord, of Ottawa, on "Utilized power;" by G. W. Walker, of Lima, on "Examinations;" and by J. Fraise Richard, of Ada, on "Verification of credentials;" while addresses were made by Hon. James McKenzie on "How to achieve success;" by J. B. Peaslee, of Cincinnati, on "How to teach arithmetic;" and by the same on "Methods of teaching spelling."

The session is said to have been the largest and most interesting of the seven held, and the papers to have been of a high order.—(Ohio Educational Monthly, February, 1877, pp. 67, 68.)

LIST OF SCHOOL OFFICIALS IN OHIO.

Hon. CHARLES S. SMART, *State commissioner of common schools, Columbus.*

[Term, from second Monday in January, 1875, to second Monday in January, 1878.]

(Report for 1875–'76 of Hon. L. L. Rowland, superintendent of public instruction, pp. 116–121.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Organic Law of 1845; Congressional Bill of August 14, 1848; Territorial Laws of 1849 and 1851; Statutes of Oregon, 1855; General Laws of Oregon, 1843 to 1872; Constitution of 1857; Sketch by Rev. George H. Atkinson, D. D., in State Report for 1875–76.

PROVISIONAL AND TERRITORIAL LAWS.

This great State of the Pacific coast, first effectively discovered in 1792, and first extensively explored in 1804 and 1805, was not much settled before 1839, not put under any government till 1844, not organized as a Territory till 1848, not admitted as a State till 1859. The first hardy pioneers who went thither from the East, or were sent in by the Hudson's Bay Company from Canada, had often no families to take along with them, or did not venture to carry with them those they had. It was, therefore, long before there was any necessity for schools, or any movement to establish them. The earliest of these were apparently private ones for the children of the Hudson's Bay Company's employés, or mission and church schools set up by the agents of the Methodist Episcopal Church from 1834, by those of the American Board of Commissioners for Foreign Missions from 1836, and by those of the Roman Catholic Church from 1841 and 1842, followed later, but effectively, by those of the Congregationalists in 1847, and of the Protestant Episcopal Church in 1869 and 1870.

It was not till the establishment of a provisional government, July, 1845, that the organic law which laid the basis of that government gave a voice to the growing sense of the need of mental training, in section third of its first article, which said, "Schools and the means of education shall be forever encouraged." At that period, however, there were no public funds for the maintenance of schools. They had to be supported by voluntary local taxes, by subscriptions, or by missionary funds. But that they were wanted and were being fast established was shown by the rapid sale of $1,900 worth of school books taken in or ordered by Rev. George H. Atkinson, who in 1847 had been sent by the American Home Mission Society to labor among the people and to aid in the work of education.

The bill of the United States Congress, August 14, 1848, which organized a territorial government for Oregon, set the liberal example, that has since been followed in like cases, of ordering the reservation for school purposes, not of one section alone in every surveyed township as previously, but of two, the sixteenth and thirty-sixth, besides seventy-two sections for a university. This noble foundation for a noble school fund was quickly built on by an act of the territorial government passed September 5, 1849, devoting to the school fund the principal of donations and bequests to the Territory for school purposes, and the proceeds of sales of school lands, with the product of licenses, fines, forfeitures, or penalties. The same law provided that the interest of the fund thus created should be annually aided with the moneys accruing from the lease or rent of school lands and from a territorial tax of 2 mills on the dollar, and should be distributed each year among the school districts of the Territory, proportionally to the number of children of school age in each, for the support of common schools. The law then provided for the organization of a full school system by the formation of school districts; by the election annually of 3 directors in each for the establishment and care of schools and the employment of proper teachers; by the appointment of 3 competent persons in each county to examine and pass upon the qualifications of teachers; by the election also of a county school commissioner in each county to look after the general interests of the schools; and by the choice through the legislature of a territorial superintendent for the supervision of the interests of common schools throughout the Territory, all these officers, except the directors, to hold for 3 years. From these excellent arrangements there was, however, a retrogression February 7, 1851, by the abolition of the office of territorial superintendent and the reduction of the tax for schools to 1 mill on the dollar from the 2 first ordered. This 1 mill was continued by the revised law of January 30, 1855. But the next day after this, January 31, 1855, the tax was raised again to 2 mills; the election of county superintendents of schools was ordered, to hold for terms of 3 years each; power was given school directors, on the vote of their district meeting, to levy district taxes for school purposes; teachers were required to keep a register and file it with the district clerk at the conclusion of each term; districts failing to organize or to report to the county superintendent were cut off from their share of the school fund for the year; and schools kept in any district the teachers of which should be supported out of the county school fund or by tax on the district as aforesaid were declared to be open and free to all children of the district between the ages of 4 and 21.

STATE LAWS RESPECTING SCHOOLS.

The constitution of 1857, under which the State was organized in 1859, provided anew for the establishment of a school fund, for the distribution of the income of it

as before, for the maintenance of a uniform and regular system of common schools, for the constituting of the chief State officers a board of commissioners to sell and invest the proceeds of school and university lands, and for the making of the governor ex officio superintendent of public instruction. After the expiration of 5 years, however, the legislature was to have power to provide by law for the election of a superintendent, to fix his compensation, and to prescribe his powers and duties.

October 2, 1872, an act amendatory of all previous acts detached the office of superintendent of schools from that of governor, and provided for the election of a superintendent, first by joint ballot of the legislative assembly and from 1874 and onward by the people every four years. A State board of education was also provided for, to consist of the governor, secretary of state, and State superintendent, and to have power to authorize a series of text books for the schools, to prescribe rules for the government of them, and to act as a board of examination for such teachers as should desire life diplomas, State diplomas valid for 6 years, or State certificates of the same force as those granted by county superintendents, entitling their holders to teach in any county for 2 years or 6 months, according to their grade. These county superintendents were retained, with new and fuller specification of their duties, and so were the minor officers of districts as before; while for the fuller support of schools the county tax of 2 mills on the dollar was raised to 3 mills. This law continues still in force, and under it the school system seems, on the whole, to be well administered. Schools are kept open, with the aid of the additional mill tax, on an average nearly 5 months each year throughout the State; and for the term during which they are sustained by the State apportionment and county tax or district tax are free to the children of all residents. It appears, however, from the State report for 1875–'76 that in a portion of the counties rate bills are still collected, probably for a continuance of school beyond the time for which the State apportionment and local tax suffice.

No State normal school to improve the preparation of teachers has been yet established, but under the law of 1872 institutes are held by the State superintendent in each judicial district of the State each year, and in three colleges provision is made for giving some normal school instruction to such as desire to teach.

PRESENT CONDITION.

The number of ordinary schools reported for 1875–'76 was 728; the number of advanced schools, 17; the number of private primary schools, 105; of private advanced schools, 17; of collegiate schools, 10. Some of the private or church schools are of high rank and great efficiency.

A State university, to complete and crown the school system, has been in progress since 1872, and has a fund of $60,000 now in hand from sales of lands given for it by the General Government, with a prospect of at least $40,000 more. It was stated in the last report of the State superintendent that it would be opened for the reception of students October 16, 1876; and when it shall be linked with the State schools by a plan admitting scholars from these to its classes on their graduating with a certain average of excellence in a set of studies definitely prescribed, the State school system will be measurably complete.

An institution for instruction of the deaf and dumb was established by the State in 1870, and one for the instruction of the blind in 1872, both under the direction of the State board of education.

SUPERINTENDENTS.

Under the territorial act of September 5, 1849, Dr. J. McBride was chosen territorial superintendent, and continued such till the abolition of the office, February 7, 1851.

Under the State constitution of 1857–'59 the governors of the State acted as superintendents of public instruction till 90 days after the close of the legislative session at which was passed the law of October 29, 1872. Then Sylvester C. Simpson was chosen superintendent, and served till the election in 1874 brought Dr. L. L. Rowland to the superintendent's chair. He is still in his first term.

ELEMENTARY INSTRUCTION.

EDUCATIONAL OUTLOOK.

The outlook to the educationist is eminently encouraging. The school funds, which are at once the sinews and the nerves of the school system, are in a condition which warrants the fullest assurance that the State will soon be possessed of ample means for current expenses. The annual three-mill tax, the largest income at present for the support of public education, is cheerfully and promptly paid. The rate bills and district taxes show approximately the aggregate annual voluntary outlay of the citizens for the promotion of public education and speak well for their liberality and enterprise. The number of children increases by a definite percentage, as does also the number of schools and terms. The demand for more and better teachers likewise increases; and this demand will be supplied, in some degree, as a consequence of the excellent

work of the teachers' institutes. The new rules for examining teachers are producing happy results, and the tendency for the past two years has been to elevate the standard of qualifications. The process is more definite than formerly, being in writing and under the eye of the county superintendent and two or more professional teachers. The legal time for examination is fixed, and the schedule of questions is prepared quarterly by the State board.—(Report, 1875–'76, pp. 18, 23, 27.)

PROGRESS OF THE SCHOOLS.

The school reports now required of each teacher, at the end of every term, call for full information as to the progress of the pupils, but, thus far, there has been a lack of full reports. New teachers and clerks in many cases fail to learn and do this duty, thus leaving the State superintendent to guess respecting the actual condition of some of the schools. Of others full reports plainly show growth and promise. In Portland and in Salem the grading of the public schools has advanced in a very marked degree, while other schools, especially in the towns and more thickly settled parts of the country, practise something of this system. Yet there are schools with little idea or means of progress, needing the thought and work of good teachers and district officers to lift them out of the old rut and set them on a new and safe track.—(Report for 1875–'76, pp. 24, 25.)

COUNTY SCHOOL SUPERINTENDENTS.

The law requires county school superintendents to visit the schools taught under their certificates at least once in six months, and all persons who accept the office bind themselves by oath to comply with this requirement. The compensation, however, is too small to remunerate them for the time thus spent, it being in many cases as small as $100 a year, and in one instance falling as low as $50. The consequence is that the work of school visiting is neglected by many such superintendents, who thus place themselves in the position of violators of the law and men forsworn. An amendment to the law is therefore recommended by the State superintendent increasing the salaries of those who are working at such meagre rates.—(Report, 1875–'76, pp. 43, 44.)

CITY SCHOOL SYSTEM.

PORTLAND.

Officers.—A board of directors of 3 members, one going out of office each year, and a city superintendent of schools.

Statistics.—Youth between 4 and 20 years of age, 2,911; total enrolment of pupils 1,870; average number belonging, 1,281; average daily attendance, 1,186; per cent, of daily attendance on number belonging, 92.6; number of regular teachers, 26. Tota. cost of education per pupil enrolled, $21.39.

Remarks.—The school system embraces primary, grammar, and high grades. The high school was organized in 1869 with an enrolment of 45 pupils. It now numbers 161 pupils enrolled, of whom 66 are boys and 95 girls.

Drawing has hitherto been neglected. A few of the primary teachers have voluntarily given some attention to it, and with good results, but not until the past year has any attempt been made to teach it scientifically or even systematically.—(Report of Superintendent S. W. King, for 1875–'76.)

TRAINING OF TEACHERS.

TEACHERS' INSTITUTES.

In accordance with the law, which provides that the State superintendent shall hold teachers' institutes in different places throughout the State, a State teachers' institute was held in 1875 and 1876, at the capital, and 9 district teachers' institutes in as many different points throughout the State. All these meetings were productive of much good, and many of them proved an extraordinary success in arousing enthusiasm among teachers, school officers, and other members of the community, and in calling forth their best efforts. At the State teachers' institute held in 1875, nearly all the prominent educators of the State were present during one or more days, and were ready for any duty to which they might be called. All the State officers were also in attendance, and the governor, secretary of state, and others participated in the regular exercises, and rendered invaluable service. This was the largest assemblage of teachers that had ever up to that time met in the State. It was exceeded, however, by the meeting of the same institute held at the same place in 1876.—(Report, 1875–'76, pp. 50–90.)

A brief account of this meeting may be found under the head of "Educational Associations."

EDUCATIONAL JOURNAL.

The Oregon Educational Monthly, published at Salem, from January, 1876, at least until July of that year, afforded during that time a means of frequent communication between the State superintendent and subordinate school officers, and must have done much to improve the teachers who read its pages.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The number of public schools of advanced grade, as given by the State superintendent in his report for 1875–'76, is 17, an increase of 2 during the year. The studies pursued in these, in addition to the common English branches, are higher arithmetic, geometry, algebra, general history, composition, physiology, natural philosophy, chemistry, botany, and book-keeping.—(State report, 1875–'76, pp. 21, 120.)

PRIVATE SECONDARY SCHOOLS.

In 2 schools for boys, 2 schools for girls, and 9 for both sexes, outside of the public school system, there have been reported to this Bureau 1,268 pupils under 59 teachers. Of these 99 were in classical studies, 126 in modern languages, 90 preparing for classical courses in college, and 24 for scientific courses. Drawing was taught in 3 of these schools, vocal music in 11, and instrumental music in 10. A chemical laboratory was reported by 1, philosophical apparatus by 3, and libraries of 24 to 5,000 volumes by 6, the whole number of volumes being 5,999.—(Returns for 1876.)

PREPARATORY DEPARTMENTS.

Five preparatory departments report 9 teachers and 307 pupils, of whom 62 were preparing for classical and 97 for scientific courses.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY OF OREGON, EUGENE CITY.

The act of Congress admitting Oregon into the Union donated to the State 72 sections of land for the erection and maintenance of a State university. The institution was organized by the legislature of 1872, and located at Eugene City in consideration of that city furnishing a suitable building and grounds for its use. The building, when completed, will cost $75,000 or $80,000. It is of the best, strongest, and most enduring material, well ventilated, and constructed on the most improved plan for school purposes. The lands donated by Congress to the State for the university have all been selected and about half sold. The proceeds constitute an irreducible fund for the university, the interest of which can only be used to pay professors and the incidental expenses to keep up the school. The fund (in 1876) amounted to $60,000, and when all the lands are sold it is estimated that it will reach $100,000 or more.

The law provides for the free tuition of one student from each county and one for each member of the legislature. The curriculum will comprise the usual college course, a complete course in science, and a normal course planned with special reference to the wants of teachers.—(State report, 1875–'76, pp. 148–153.)

OTHER COLLEGES.

Christian College, Monmouth, is under the auspices of the Christian Brotherhood of Oregon. It possesses buildings and grounds valued at $20,000, and has an endowment of $25,000. There are two separate and complete courses of study, the classical and scientific. The degree of bachelor of arts is conferred on men or women completing the former, and that of bachelor of science on those completing the latter; A. M. is conferred on any worthy bachelor of arts of 3 years' standing. Since the graduation of the first class in 1871, the number of alumni has reached 34.—(State report, 1875–'76, pp. 131, 132.)

McMinnville College, McMinnville, chartered in 1859, is under the patronage of the Baptist Church, possesses buildings and grounds worth $5,000, and has an endowment of $25,000. The course of study is the same as that in the best American colleges. Portions of Cæsar, Cicero, Virgil, the Anabasis, the Iliad, and algebra to equations of the second degree are required for matriculation.—(State report, 1875–'76.)

Pacific University, Forest Grove, is in its college management non-sectarian although Christian. The funds for its support were contributed in nearly equal amounts by Presbyterians and Congregationalists, but with the explicit understanding that it should be under no sectarian control, and the trustees have given bonds that it shall remain thus independent. For admission to the regular college course there is required, besides the ordinary English and mathematical preparation, about one year of study in Greek and somewhat over two years in Latin. There have been almost yearly graduations in some of the courses since 1863, when the degree of A. B. was first conferred, making 35 in all who have received their first degrees.—(State report, 1875–'76, pp. 142–144.)

Philomath College, Philomath, founded and incorporated in 1866, is under the supervision of the United Brethren in Christ. It has 3 courses of study, viz, a classical, a scientific, and a ladies' course, embracing studies similar to those in first class colleges, with commercial and phonograph departments. The institution is rapidly growing.—(State report, 1875–'76, pp. 145, 146.)

Willamette University, Salem, is in the possession of beautiful and extensive grounds, a large, commodious college edifice, a good philosophical and chemical apparatus, an extensive library, and a valuable cabinet of natural history. It is under the patronage of the Methodist Episcopal Church. There are two regular courses of study in the literary department, the classical and the scientific. The classical includes higher mathematics, natural science, Latin, Greek, and at least one modern language. The scientific course omits a part of the Latin and all the Greek. Both sexes are admitted.—(State report, 1875–'76, p. 157.)

COLLEGE FOR WOMEN.

St. Helen's Hall, Portland, an institution exclusively for young women, reports an attendance in 1876 of 140 students, under 11 teachers. Of the students, 20 were pursuing preparatory, 110 regular collegiate, and 10 partial courses. There is a library of 400 volumes. Length of course, 3 years. Vocal and instrumental music, drawing, painting, French, and German are taught. There is a gymnasium, some apparatus for the illustration of natural philosophy, and collections in conchology and botany.—(Special return, 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

CORVALLIS STATE AGRICULTURAL COLLEGE.

This institution, founded by the Methodist Church, was designated and adopted by the State legislature in 1868 as the Agricultural College of the State, from which it receives annually $5,000. The course of study is about the same as that of other agricultural colleges, and is distributed in seven schools, viz: physics, mathematics, moral science, language, history and literature, engineering, and special studies in agriculture. The degrees conferred are A. M., A. B., B. S., and that of graduate of a school.—(State report, 1875–'76, pp. 134, 135.)

MEDICAL.

The medical department of Willamette University, organized in 1867, is the only professional school of the Pacific coast north of San Francisco. The course of study, faculty of instruction, and requirements for graduation have conformed in all respects to the advancement of medical science and to the rules of the American Medical Association. The requirements for graduation are 3 years' study of medicine with two full courses of lectures, a satisfactory thesis, and an approved examination, together with such other attainments as are usual in regular medical colleges.—(State report, 1875–'76, pp. 139, 140.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Oregon Institute for the Deaf and Dumb, located at Salem, was established in 1870; is supported by State appropriations, and is under the direction of the State board of education. Mr. William Smith, a deaf mute, was largely instrumental in awaking the interest which eventually resulted in legislative appropriations for the school, and was for several years its principal. Since its foundation 38 pupils have been under instruction. The number in attendance in January, 1877, was 27, of whom 12 were males and 15 females. The studies pursued are the common English branches.—(State report for 1875–'76, and return to the United States Bureau of Education.)

EDUCATION OF THE BLIND.

The Oregon Institute for the Blind, at Salem, owes its establishment to the earnest appeals of a blind lady, Miss Nellie Simpson, seconded by many philanthropic citizens of the State. It was established by the legislature in 1872, and an appropriation of $4,000 made for it. The number of pupils in attendance January, 1877, was 11; instructors, 2. There is a library of 125 volumes, of which 100 were received in 1876. The employments taught are fancy work and sewing.—(State report, 1875–'76, and return to United States Bureau of Education.)

EDUCATIONAL ASSOCIATION.

STATE TEACHERS' INSTITUTE.

This association met in Salem, August 23, 24, and 25, 1876, and was numerously attended. There was a larger number present of school superintendents and ex-superintendents than at any teachers' meeting previously held in the State. This fact is considered by the State superintendent one of the most encouraging features of the meeting, as previously the work had been confined too largely to the more practical and enterprising teachers, the school superintendents, with a few exceptions, remaining surprisingly indifferent, and the more indolent teachers entirely absenting themselves. As the institute was in session when the State superintendent's report was sent to the press, no account of its proceedings could be given by him, but its programme indicated that school government, composition, drawing in schools, primary reading, mental arithmetic, philosophy of grammar, natural science in schools, and Fröbel's Kindergarten system were among the subjects for discussion.—(State report, 1875–'76, pp. 67, 68.)

LIST OF SCHOOL OFFICIALS IN OREGON.

Hon. L. L. ROWLAND, *State superintendent of public instruction, Salem.*

[Term, 1874 to 1878.]

STATE BOARD OF EDUCATION.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Pennsylvania from 1682; Purdon's Digest, 1824, pp. 195–201; Troubat and Haly's Digest, 1829, pp. 43–48; Laws of 1830–'31, pp. 385–386, and of 1833–'34, pp. 170–179; Purdon's Digest, 1841, Stroud's revision, pp. 312–328; the same, 1847, pp. 335–359; Laws of 1854 and 1857, and Sypher's School History of Pennsylvania, pp. 251–268.

THE ERA OF PRIVATE AND CHURCH SCHOOLS.

The frame of government issued by William Penn in April, 1682, for the proprietary management of the province ceded to him by his sovereign, directed most explicitly that the governor and council should "erect and order public schools."* And yet, singularly enough, no public schools, in the present acceptation of the term, appear to have been then established. The only ones of which we have a record under the Penn government seem to have been schools for the particular Christian denomination then and there in power, in which schools poorer children of the Friends might claim tuition free, but those in better circumstances had to pay for their instruction, whether they were Friends or not. The Friends' Academy in Philadelphia, established under Penn himself, is an example still existing of this class of schools, though its largely increased means enable it to be more liberal than it once counted upon being to any members of the meeting who desire free tuition in it. And when the Swedish and English Episcopalians came into Philadelphia and its neighborhood, when the German Lutherans and Reformed settled the central counties, and the Scotch and Irish Presbyterians made their homes amidst the western hills, essentially the same system prevailed with them. Needy members of the churches rarely had any difficulty in getting their children into the church schools free, though such as had the means to pay for schooling of their wards or children were looked to for payment. Even the private schools, which quickly became common in the towns, quite often had free scholars, through the kindness of the teachers or of friends. The constitution of 1776, too, in its 14th article, directed that a school or schools should be established by the legislature in each county for the convenient instruction of youth, with such salaries to the masters, paid by the public, as might enable them to instruct youth at low prices; and if such schools were established,† they of course cheapened education to pupils who availed themselves of this provision. But, like the others, they must have been pay schools in the main, with lowered rates to a portion of their inmates only, as far as now appears; so that what we now call public schools — *i. e.*, schools supported from the public purse and for the general benefit, open to all that may desire to come and free to all residing in their neighborhood — do not seem to have been known within the State for more than a hundred years. That was the era of private and church schools.

THE ERA OF PAUPER SCHOOLS.

Before the previously mentioned period was concluded there came another, when the light of a larger Christian charity and of a broader social wisdom struck in on the prevailing darkness as to the State's duty to its children, and gave some promise of a brighter time to come. The first authoritative utterance indicating this increase of light was in Section I, Article VII, of the amended constitution of 1790, which read: "The legislature shall, as soon as conveniently may be, provide by law for the establishment of schools throughout the State, in such manner that the poor may be taught gratis." This was a step beyond the previous provision, as looking to the free instruction of a portion of the children of the State, instead of a mere cheapening of their education in the schools. But it had the fault, then common in too many States, of making an invidious distinction between the better classes and the poor, and of making these last charity scholars, thus lessening their self-respect and exposing them to slights and insults. And this fault was unfortunately made more apparent by the fact that the first law, passed March 1, 1802, to carry the constitutional provision into effect, committed to the overseers and guardians of the poor the work of selecting the objects of its benefits, and of collecting in the same way the poor taxes were collected the money to pay for their tuition and school books. This was amended by an act of April 4, 1809, which gave the matter into the hands of the county commissioners and township assessors. But the taint of the old action still hung about the law, and for the whole time of its existence, under whatever modifications, the system was tauntingly spoken of as "the pauper system," and the schools to which children were sent

* Changed November 7, 1696, to "public houses," instead of "public schools."

† That they were not established up to 1786 is evident from a law passed April 7th of that year, which says that in the embarrassed condition of the public credit this provision of the constitution could not be carried into effect, and goes on to provide for the endowment of such schools in the future by devoting to their use 60,000 acres of the public lands of the State. Dickinson College, established in 1783, having instructed many pupils in ordinary school studies at low rates, was by this act rewarded with a gift of £500 for present needs and 10,000 acres of land for future endowment.

under it as "pauper schools." As to the details of administration, much improvement was made in an act of March 29, 1824, which called for the election, in each township, ward, or borough that should accept the act, of three schoolmen, one to be changed each year, and gave to these the duty of forming convenient school districts, providing for the erection of school-houses, furnishing them with books and stationery, examining teachers, making contracts with them, sending scholars to them to be taught for three years at public expense, and meeting this expense by an assessment upon property for a school fund. But this act was within two years (February 20, 1826,) repealed by another which brought back the old law of 1809, with all its faults and all its odium. And so things continued, except in the counties of Cumberland, Dauphin, and Lancaster, and in the city of Philadelphia,* until there came in

THE ERA OF FREE SCHOOLS.

This better fruit of better public sentiment was prepared for by an act of April 2, 1831, which laid the foundations of a "common school fund," gave this fund into the charge of the secretary of the commonwealth, the auditor general, and the secretary of the land office, and directed that the interest of the moneys belonging to it should be continually added to the principal till the latter should yield an income of $100,000 annually, after which the interest should be distributed each year and applied to the support of common schools throughout the Commonwealth, in such manner as should be provided by law.

In little more than three years the increase of the fund was such as to promise an early reaching of the limit set, and the friends of free education, watching their opportunity, introduced into the legislature and succeeded in passing, April 1, 1834, a law "To establish a general system of education by common schools." This law (substantially the beginning of the free school system of the State) provided for the constituting of each county of the State a school division, and each ward, township or borough in these divisions a school district; for the election by the people in each district of 6 school directors; for the choice, by the county court of quarter sessions, of 2 inspectors of schools for every district; and for the heading of the system composed of all these officers by the secretary of the commonwealth, who was made superintendent of public schools. The directors, one-third of whom must be changed each year by new election, were to have the general charge of public schools within their districts; were to visit them by two or more of their number every month; were to make record in their minutes of the results of such visits, and were annually to report to the inspectors the condition of each school, the number of scholars, the studies pursued,† the length of session, the expenses incurred, the salary of the teachers, and the qualifications and general conduct of each one. The inspectors were to visit each school within their districts every three months or oftener, and to make annual report of their observations and those of the directors to the State superintendent. They were also authorized, either by themselves or as a board conjointly with all others in their school division, to examine and license teachers, and no teacher without such license could receive compensation for school service. The superintendent was to distribute forms for district reports and proceedings, to sign all orders on the State treasury for payment of moneys into county school funds; was to decide controversies as to the distribution of these moneys, or between directors and inspectors as to duties; and was to make annual report to the legislature as to the condition of the schools, the amount of school moneys needed or expended, and the things yet required for improvement of the school system. The whole was to be sustained by a distribution to each county of its share of the public school fund, and by a tax to be agreed on at a division meeting of the county commissioners and a delegate from each board of school directors, said tax not to be less than double the amount apportioned by the Commonwealth to the division. There was, however, an option given to the districts to determine at their district meetings whether they would raise such a tax for meeting the State appropriation for free schools, or would fall back on the old system of pauper schools. In the latter case the State apportionment could not be given them, but would be held for two years subject to a change of vote on their part; after which period, if there should be no change of vote, the amount was to be distributed among the divisions or parts of divisions accepting the new system.

This act was so great an advance on every general school law which had preceded it as to seem to many quite revolutionary in its character, not merely because it instituted absolutely free schools, but because it put these under secular control, ignoring churchly influences altogether, and because it evidently aimed to make the secular free school a universal thing throughout the State. The advocates of church schools and pauper

* Philadelphia, though excepted with the counties mentioned in the law, formed no absolute exception to the general rule, for, although an act of March 6, 1818, was "for the education of children at the public expense," within the city and county, it was only "indigent orphan children, or children of indigent parents," who were to be sent to school free of expense under that law, and for a long time afterward.

† Among these studies might be included industrial occupations and agriculture if in any districts it should be deemed expedient to introduce them.

schools, and the opponents of high taxes for supporting any schools, formed instantly a league with the always numerous party who fear too great an enlargement of State power, and a tremendous agitation for repeal of the new law was entered on. Through the earnest exertions of the friends of free schools, especially through those of Hon. Thaddeus Stevens, then an influential member of the legislature, the main features of the system stood the storm aroused against them, and, with some modifications increasing their efficiency, were reënacted in a law of June 13, 1836. Two of the modifications were a more than doubled appropriation from the public purse and the requisition of a tax in each accepting district of treble the State apportionment to it.

These were great improvements, as were also some of the details of administration, and from this date the battle for free schools may be held to have been fully gained as respects the State at large. The optional feature of the law, however, still remained, and it required some years of earnest advocacy of the system on the part of a most energetic secretary * to beat down the opposition of outstanding districts and secure acceptance of the law and compliance with its terms. This was so far accomplished in 1849 that the provisions of the act were from that time made imperative, and in 1854 school officers were authorized to enforce these. Thenceforward free schools have been universal, and since 1873 receive $1,000,000 annually from the State.

SUPERINTENDENCY OF FREE SCHOOLS.

The victory of the advocates of free school training being thus completely won, they set to work to strengthen the ground gained and make it as impregnable as possible. One means to this was to make the schools indisputably good, and careful supervision of them became indispensable. Accordingly, the act of May 8, 1854, which clothed school officers with full power to establish free schools, required the directors of every school district and the controllers of cities and boroughs to exercise a general supervision of their respective districts, and by one or more of their number to visit every school in it at least once a month; the object being to secure fidelity in teachers and due subordination and industry in scholars. To make this supervision still more effective and complete, the directors of school districts in every county of the Commonwealth were to meet in convention at their county seat on the first Monday of June in that year, and on the first Monday of May in every third year thereafter, and select, viva voce, by a majority of their whole number present, a person of literary and scientific acquirements, and of skill and experience in the art of teaching, as county superintendent for three succeeding school years. The superintendent was to visit as often as practicable the several schools within his county, noting the course and method of instruction as well as the branches taught, and giving such directions in the art of teaching and methods of the same as to him should seem expedient or necessary. He was also to examine persons wishing to teach in public schools as to their qualifications for such work, giving to those who were found qualified a certificate setting forth the branches of learning they were competent to teach, and without such certificate no one could be employed. To make more sure the thoroughness of this examination, it was allowed that the school boards by whom the teachers were to be employed should be present at it, should they choose to come.

This institution of county supervision, with the careful guards thrown around it in the law, was full of promise for the future of the schools. It put a teacher at the head of teachers. It removed him, by the mode of his election, from the sphere of politics, and made him the chosen adviser and assistant of the school boards by whom he was elected. And as there was conjoined with this office in the law the further institution of a deputy State superintendent for fuller general supervision of the schools, the system was brought by this act of 1854 much nearer the perfection sought, especially as a longer school term was provided for and the power of establishing graded schools was given.

In 1857, April 18, came another great improvement, in a provision that after the first Monday in the following June the department of common schools should be detached from the office of the secretary of the Commonwealth, and that a superintendent of common schools should be appointed by the governor every third year by and with the consent of the senate, to hold office for three years—a term which since 1873 has been made four years, with a change of title to superintendent of public instruction. This gave the State schools a living head wholly devoted to them and to their interests; and as this head has been allowed to have two deputies, a great increase of efficiency in the State work has resulted.

The gentlemen who served as State superintendents in virtue of their office as secretaries of the Commonwealth were: James Findlay, 1835–1836; Thomas H. Burrowes, 1836–1838; Francis R. Shunk, 1839–1841; A. V. Parsons, 1841–1843; Charles McClure, 1843–1845; Jesse Miller, 1846–1848; Townsend Haines, 1848–1850; A. L. Russell, 1850–1852; F. W. Hughes, 1853–1854; C. A. Black, 1854–1855; Andrew G. Curtin, 1855–1857.

* Hon. Thomas H. Burrowes, first superintendent ex officio, to whom the free school system of Pennsylvania owes very much, alike for excellent administration and skilful framing of good laws.

Those having the superintendency of schools alone have been: Henry C. Hickok, 1857–1860; Thomas H. Burrowes, again, 1860–1863; Chas. R. Coburn, 1863–1866; James P. Wickersham, from 1866 by successive reappointments to the present time. Mr. Burrowes and Mr. Wickersham have added to their other services the editorship of the Pennsylvania School Journal, the former from 1852 to 1870; the latter, from that year until now.

NORMAL SCHOOLS AND SPECIAL SCHOOLS.

Schools for the special preparation of teachers for their work had been sought for as one of the additional provisions of the laws from 1835 to 1854. Public opinion was not then quite ripe enough to include them, but on May 20th, 1857, the friends of good schools had the pleasure of welcoming a law which divided the State, with the exception of Philadelphia city and county, into 12 normal school districts, and authorized the establishment in each one of a school to accommodate 300 pupils, with at least 6 professors for instruction of them. The special aim in all these schools was to be "the professional training of young men and women as teachers for the common schools." Nine of these schools have been established, besides one in Philadelphia; have had in them up to 1876, a total of 27,258 students; and have graduated in their elementary courses 986, in their scientific courses 51, in their classical courses 6.

Schools for the unfortunate have not been forgotten. One for the deaf and dumb was established under State auspices in Philadelphia in 1821, and has since grown into great proportions. Another was founded in 1876 at Turtle Rock, in the western portion of the State. One for the blind, opened as a private enterprise in Philadelphia in 1833, has been taken since under the fostering care of the State and liberally aided. To these was added in 1853 a school for feeble-minded children at Media, which has done noble work. And when the war of the rebellion threw multitudes of soldiers' orphans on the kindness of the State, the obligation thus imposed was met, as it had been promised that it should be, by the institution of orphan homes and schools for these, in 44 of which 8,580 children have been taught and clothed and fed at a total expense of $4,840,756.

All the above, as State schools, have been substantially part of the State school system, to which also in a sense belongs the State college for training in agriculture and the mechanic arts, established in 1859 near Bellefonte.

ELEMENTARY INSTRUCTION.

GENERAL VIEW.

The hard times have cut down teachers' salaries, but in all other respects the results of the year's doings are encouraging.

The estimated number of children of school age who are not in school is 34,197. The number of children attending private schools is estimated at 27,565; number of teachers employed in these, 960. Drawing is taught in 2,659 of the public schools; vocal music in 3,605. In 783 schools the apparatus was increased during the year; 5,553 have no apparatus worth mentioning, while only 2,438 are well supplied with it; 2,810 have unsuitable furniture, while 6,506 are suitably furnished; 2,595 are first class school-houses; 3,233 are without suitable outbuildings; 5,210 are badly ventilated, and 1,542 are unfit for use.—(Report of State superintendent for 1876, pp. xlvii–lxix.)

Further particulars as to the condition and workings of the public school system are given in the following extracts from reports of county superintendents:

REPORTS OF COUNTY SUPERINTENDENTS.

In Adams County some progress is reported, but it was neither so rapid nor marked as could be wished; one of the main hindrances was that the best teaching talent was lost by small salaries paid. In Allegheny, too many small schools, taught by poor teachers; favorable sentiment toward education shown by number and excellence of new school-houses built; on the whole, schools in a comparatively prosperous condition, and the cause of education slowly but steadily advancing. Beaver County reports a growing conviction that in order to have good schools, teachers of experience and high qualifications must be secured. In Bedford County the year has been one of toil and trial on account of financial depression; school interests have suffered in common with others; many needed improvements were deferred, but others were made; teachers generally succeeded well; new school-houses much needed. In Berks, progress was slow, but sure; obstacles are here which are not found in all the counties; many of the children speak German, and thus have the English language as well as the other branches to learn; coöperation between parents and teachers is hearty; value set on education higher than formerly. In Blair, educational progress is manifest in the erection of superior school-houses. In Bucks, the operations of the year have been more satisfactory and full of encouragement than in any previous one; the county institute reflected its work more fully than ever before upon the schools of the county. In Butler the educational interests have been advancing gradually; the people give more

attention to the improvement of the schools, manifested in many localities by a desire to secure better teachers, schools, and school-houses. In Cambria, commendable progress has, on the whole, been made; obstacles are want of parental coöperation, of better salaries to competent teachers, of a uniform series of books, and of thorough classification, inexperience of teachers, irregular attendance, and inconvenient school-houses. In Cameron, educational interests are slowly but surely advancing; better teachers are demanded; more patrons have visited the schools. In Carbon, obstacles are the employment of non-professional teachers, and apathy on the part of parents in respect to visiting schools. In Centre, the sentiment of the people shows itself in the more suitable location and greater comfort of the schools, better attendance, and higher salaries to teachers, all resulting in the greater efficiency of school work. In Chester there has been no striking advance, but some progress. In Clearfield, a substantial and encouraging progress in the schools, notwithstanding the stringency in financial affairs; teachers were better qualified and labored more earnestly; a greater number of educational meetings were held and they were better attended. In Clinton, some advancement has been made; better methods of instruction have been used; the great want is better teachers. In Columbia, there was better progress than was made in any of the three preceding years. In Crawford, an awakened public will no longer tolerate inferior teachers; more have been dismissed for incompetency than ever before. In Cumberland, the obstacles are inefficient teachers, frequent changes, low salaries, and short terms. In Dauphin, a steady growth of enlightened views with regard to the schools and a rapid improvement in the curriculum of the school room. In Delaware, commendable progress in the building of school-houses; the public schools are steadily improving in worth, and constantly advancing in popular favor. In Elk, educational advancement, earnestness of teachers and directors, and an intimate coöperation between teacher and parent. In Erie, schools were as progressive as could be expected; hindrances to progress have received heavy blows during the year. In Fayette, educational interests were advancing slowly; there is a general demand for better qualified teachers. In Forest, the cause is advancing, though not so rapidly nor so universally over the county as is desirable. In Franklin, there are still 37 school-houses not worthy the name; only 43 (out of 215) have grounds of sufficient size, and one-half the entire number are without suitable outbuildings. In Fulton, no indications of special improvement, but no abatement of educational interests, and school work generally accomplishing better results. In Greene, the cause is gaining as the teachers become more efficient. In Huntingdon, education, in common with other interests, has suffered from the general depression of business, yet there is unmistakable evidence of progress, though results attained are not the most satisfactory. In Indiana, teachers are learning that, to remain in the profession, they must do good work, and, owing to the influence of institutes, better methods are being generally adopted; there is less routine and more earnest work; less reciting by the teacher and more by the pupil; less mechanical work, more original thinking; less whipping and better deportment. In Jefferson, since the abandonment of township institutes 6 or 7 years ago, there has been an apparent retrogression in many of the first requisites of good schools. In Juniata, citizens manifest an active coöperative interest in the schools; teachers will compare favorably with those of other counties; school-houses poorly supplied with apparatus, and many of the teachers fail to use what they have. In Lancaster, schools well attended, and nearly all doing well. In Lawrence, condition of schools generally satisfactory; they are doing more effective work, are better supported, and more highly valued each succeeding year; progress slow, but schools gradually rising to a higher standard, and opposition to the system yielding. In Lebanon, no great changes, but general progress. In Lehigh, no extraordinary changes, but considerable progress in school affairs; more interest is manifested; there is more care in selecting teachers, and a number of districts pay them according to experience and qualification. In Luzerne, the schools have been more efficient, notwithstanding a few notable failures. Lycoming County reports encouragement given to the common school cause by enterprising directors, hard working teachers, faithful clergy, a public spirited press, wide awake citizens, and warm hearted educational workers. Few poor school-houses remain, yet occasionally may be found an old log-ribbed fossil stored away among the mountains of sufficient age and oddity to challenge admiration as a relic of bygone days. In McKean County, results of the year's work not brilliant, but as great as could be expected from the elements to be dealt with. Mercer reports a growing interest in the schools; prejudice fast becoming extinct, and the standard of education advancing; obstacles are constant changing of teachers, lack of uniformity in text books, "boarding around," and shortness of the school term. In Mifflin, with few exceptions, the schools have done well; no remarkable changes, but steady progress. In Monroe, economy has been the rule, in many cases without regard to results; school grounds are not made pleasant; nearly half of them are destitute of suitable outbuildings; none of the rooms well furnished with apparatus, and one township did not raise the necessary money and had no schools during the year. In Montgomery County the improvement in school-houses, furniture, and apparatus is fully up to

that of former years; the great need is better salaries in order to secure better teachers. In Montour, the business depression has operated seriously against progress; still, the schools, owing to superior teachers, generally hold their own where they do not improve. In Northampton the educational interest has been steadily advancing in many of the districts, notwithstanding the depression in business. In Northumberland the schools are much better than they are conceded to be; they are on the onward march; better houses, better furniture, and better teachers are demanded. In Perry County the salaries of school teachers were reduced, to the injury of the schools. In Pike County, notwithstanding the hard times, the educational progress was such as to give renewed encouragement to the friends of public schools. In Potter, educational affairs the same as during the last few years; short terms and low and decreasing wages afford but little encouragement to teachers to qualify themselves well. In Schuykill, some progress has been made, on the whole; there are deficiencies and difficulties, but all agencies are working together harmoniously for the best interests of the schools; public sentiment is almost unanimous in their favor. In Snyder, the schools were in a more satisfactory condition than during the previous year, yet some were very poor; most of the graded schools are such only in name; encouraging progress made in methods of instruction; the relations between teachers and pupils more friendly; less frequent use of the rod; less damage done to school property, and rooms much neater. In Somerset, all the districts for the first time kept their schools open the required 5 months; 160 of the teachers were successful; 52 lacked in government, and 14 were entirely out of place in the school room. Sullivan reports school affairs encouraging; teachers, as a class, did their work well. In Susquehanna, the school work advances in interest and success, yet too many schools are behind just demands, the lack arising from neglect or incompetency on the part of teachers, directors, and parents. Tioga reports a general interest in the cause of education, an improvement in grounds, increase in number of outbuildings and of school-houses; the frequent change of teachers is a great hindrance. Union reports no striking improvement; still, notwithstanding the depression of business, the schools have not materially suffered, but present some evidences of improvement. Venango reports able teachers in responsible positions; among the obstacles are want of apparatus, of uniformity in text books, and of properly trained teachers. In Warren the reduction of salaries has caused many well qualified teachers to leave the work, younger ones taking their places. In Washington all the school rooms are furnished with maps, blackboards, and cards, and many of them are ornamented with drawings, pictures, &c.; few houses have suitable playgrounds, consequently pupils trespass on private property; in nearly all districts there were one or more schools of marked success. In Wayne many school-houses sadly need repairs; the new houses are generally well built and furnished; teachers are not paid according to grade, but all receive $15 per month, and "board around." In Westmoreland schools are becoming more effective, and are more highly valued each year; there is, of late, more care taken in the election of directors and in the selection of suitable sites for school-houses; notwithstanding financial depression, large sums of money have been expended in erecting and properly furnishing good school-houses. In Wyoming the schools have made "quite an advancement," although the general depression in business has had its effect in shortening school terms and reducing teachers' salaries. In York the schools are not what they ought to be, but they are better generally than at any time in the past.—(Report for 1875-'76 of Hon. J. P. Wickersham, superintendent of public instruction.)

CITY SCHOOL SYSTEMS.

ALLEGHENY.

Officers.— A board of controllers of 66 members, 6 from each ward, with a secretary and city superintendent of public schools.

Statistics.—The number of pupils enrolled during the year was 12,360; average daily attendance, 7,879.

Remarks.—There is no central high school, but the pupils in the highest grades attend the ward schools to which they belong. During the year there were 7 such ward high schools, with an aggregate average attendance of 243 pupils.

Drawing has been an optional study in the schools for several years, but it received comparatively little attention until last year, when a special teacher was employed and the pupils in all departments made commendable progress in it.

German, which is the vernacular of a majority of the citizens of the seventh ward, has been introduced into their public schools as a branch of instruction.—(Superintendent's report, 1875-'76, pp. 163-165.)

HARRISBURG.

Officers.— Not given in any form allowing of certain statement.

Statistics.— Number of schools, 72; enrolment: in primary grade, 2,183; in secondary,

1,145; in intermediate, 408; in grammar, 265, and in high, 151; total, 4,152, the number of each sex being very nearly equal.

Remarks.—Evidences of progress and improvement in the schools are found in a fuller knowledge on the part of the citizens of the work done in the schools, and a correspondingly increased public sentiment in favor of them and of the system.

Owing to the fact that so few, comparatively, reach the higher grades of school, the course of study has been subjected to such gradual changes as seem needed to give in each grade that kind of learning and culture which will be of most value in the practical affairs of life, omitting, as far as possible, the verbiage of text books—useless rules and meaningless definitions.—(Report of State superintendent, pp. 187, 188.)

PHILADELPHIA.

Officers.—A board of public education of 31 members, appointed by the judges of the court of common pleas and district court, one being selected from each ward, holding office three years, one-third going out each year. There is no city superintendent, but the president and secretary of the board perform the duties of one.

Statistics.—Population, (census of 1870,) 674,022; enrolled in public schools in 1876, (according to the report of the State superintendent,) 153,031; number belonging at the close of 1876, 99,291, an increase for the year of 3,739. Average attendance, 84,559. The distribution of pupils in the various grades was as follows: In 225 primary, 50,735; in 132 secondary, 25,863; in 27 consolidated, 6,796; in 62 grammar, 14,351; in the girls' normal school, 902, and in the central high, 644. City appropriation for public schools, $1,711,957.22; expended, $1,688,836.02.

Remarks.—The system of public schools during the year 1875-'76 more than maintained its yearly rate of progress, a progress which has been continuous ever since the enactment of the general school law in the State. A number of new and well constructed school buildings have been added during the year. The teachers, numbering nearly 1,900, labored with their accustomed fidelity and worthily discharged the duties of their office. It is a gratifying matter of record that councils refused to reduce their salaries, conceding that their work was even then scarcely compensated sufficiently.

Normal School (for girls.)—The most important event of the year in school affairs was the completion and formal dedication of the new normal school building. The structure, in its pleasing style of architecture, its perfect adaptation for all the purposes of the school, and the substantial manner in which it has been reared, is unsurpassed in any of the features of a handsome and complete normal school building.

Central High School.—This school for boys gives a 4 years' course of careful training in studies which are of immediate utility in active life, and also prepares pupils for admission to the leading universities and colleges of the country. Notwithstanding the change from semi-annual to annual admissions and the raising of the standard test of eligibility, the average attendance has increased. Attention is called to the overcrowded condition of the school, and the necessity of providing for it more adequate accommodation.

Night schools.—The 51 evening schools were attended by 14,672 pupils. These schools continue to advance in popular appreciation, and their advantages each succeeding season reach directly an increased number of people. One of the most gratifying features is the unusually large attendance of mechanics.

Technical education.—During the past year the movement to secure industrial art training has made some progress, and the opinion is expressed that the day is not far distant when there will be grafted upon the public school system a practical mode of technical study. During the Centennial period addresses were delivered to teachers, school boards, and pupils upon its utility and the necessity for its adoption. In one of these a vigorous plea was made by Mr. Charles B. Stetson for instruction in drawing as absolutely essential from a purely practical and economical point of view; and the opinion was expressed that public art education has now become such a necessity, that if teachers do not lead in the matter the manufacturers will soon take the initiative and insist upon drawing being taught in all public schools. The Centennial Exhibition has aroused public spirited citizens, and the new museum and school of industrial art is a first and grand step in the right direction.—(Report of the city board of education, 1875-'76.)

PITTSBURG.

Officers.—A central board of education of 36 members, one-third going out of office each year, subdistrict boards of directors of 6 members each with a like annual change, and a superintendent of public schools.

Statistics.—Estimated present population of the city, 130,000; children of school age, not known; enrolled in public schools, 21,488; in private, 11,060. Average attendance in public schools, 14,501; average to each teacher, 40. Teachers employed: males, 53; females, 361—total, 414; wages of these, $300 to $3,000 for the year. Salary of superintendent, $3,000. Length of school year, 200 days. Receipts for schools, $546,849; expenditures, $433,066. Average expense per capita, based on average daily attendance, $26.

Notes.— Special teachers of music and drawing appear to have been employed, with male and female teachers for evening schools, in which were 1,165 enrolled pupils in November, 1876, with an average attendance of 663, besides 29 in a mechanics' evening school. A normal class and city teachers' institute appear to have been maintained. The annual session of the latter, held in August, 1876, continued for 3 days, and was devoted to "The Centennial and its lessons," the "Condition and influence of education," "Physical geography," "School etiquette," "School recitations," "Class management," "English literature," and kindred themes.—(State report for 1875–'76, pp. 200, 201, special return from Superintendent Luckey, and Educational Voice for September and November, 1876.)

OTHER CITIES.

Allentown.—The public schools here are gradually improving. The grades are primary, advanced primary, secondary, grammar, and high. The course of study in the grammar schools includes, in addition to the common branches, physiology, zoölogy, botany, German, history of the United States, and book-keeping. From these schools about 50 pupils are annually promoted to the high school, in which the attendance is steadily increasing, both in the number enrolled and in the average daily attendance. The graduating class numbered 18, of whom 7 were boys. All of them intended to enter college.—(State report, pp. 166–168.)

Altoona.—A decided improvement has been made in the schools. The subject of ventilation has recently received attention; one building has been ventilated by taking the impure air out of the rooms near the floor. The revised course of study is practical and thorough. There are 8 grades below the high school. The plan of educating boys and girls together, now adopted in all the schools, as it had been previously in some of them, has had a very satisfactory result. Drawing has been reintroduced into the schools. It was taught some years ago, but having met with strong opposition, was dropped.—(State report, 1875–'76, pp. 168–170.)

Carbondale.— A steady educational progress is reported. Obstacles in the way of securing necessary school accommodations have nearly disappeared, and public sentiment has prevailed upon the school board to increase the school term to ten months. Tardiness, truancy, and non-attendance have decreased. The enrolment, as well as the average daily attendance, shows an increase of 8 per centum over the year 1874–'75. The semi-monthly institutes, 18 in number, were well attended by the teachers, and resulted in great profit to them.—(State report, pp. 170–173.)

Chester.—The schools here are graded as primary, secondary, grammar, and high. Three of them are for colored pupils. Two night schools for white and one for colored pupils were in operation for several months during the winter, with good results. The primary, secondary, and grammar schools each represent two years of the course. Five per cent. of the pupils attend the high school, 11 per cent. the grammar, 23 per cent. the secondary, and 61 per cent. the primary schools. Out of 20 pupils who enter the primary school, one reaches the high school; one out of 9, the grammar school; and one out of 4, (almost,) the secondary school — facts which suggest the importance of making primary instruction as thorough, practical, and comprehensive as possible.—(State report, pp. 173, 174.)

Corry.—The schools are steadily improving in character, scholarship, and usefulness; teachers are becoming more skilful and zealous; attendance has been constantly increasing, although the school population has decreased. The primary, secondary, junior, intermediate, grammar, and high schools each embrace a period of two years. Industrial drawing is taught in all the departments. There is a systematic course of musical instruction in all the grades. The curriculum of the high school embraces classical, scientific, and collegiate preparatory courses. A class of 12 graduated from it in 1876.—(State report, 1875–'76, pp. 177–179.)

Easton.— A marked improvement is reported in almost every department of the schools. Attendance was unusually good. Industrial drawing has been incorporated as a branch of study in every department. The high school, in its appropriate sphere, stands unrivalled as an educational agency. Its teaching force consists of three gentlemen of college culture, and two lady graduates of the high school.—(State report, 1875–'76, pp. 180–183.)

Erie.— Number of youth between 6 and 21 years of age, 8,402; enrolment in day and evening schools, 4,057; daily average number belonging in day schools, 2,470. The yearly enrolment in all the schools is 193 less than last year, owing to the fact that but two evening schools, with 263 scholars, were opened, while the previous year six were in operation with an enrolment of 556. In the day schools there was an increase in enrolment of 173, and in daily average attendance of 165. In 6 years the average monthly enrolment has increased over 80 per cent.—(Erie report, 1875–'76, H. S. Jones, city superintendent.)

Meadville.— During the year 1875–'76 the number of pupils in all the grades was largely increased, especially in the high school, where the classes had been small. In compliance with a demand of the school, a rearrangement of the courses of study was made whereby pupils may graduate and receive diplomas in a purely English course, a

modern language course, and a classical course. The weekly sessions of the teachers' institute were well attended.—(State report, 1875–'76, pp. 195–197.)

Norristown.— Average monthly enrolment in 38 schools, primary, grammar, and high, 1,624. The attendance was 2 per cent. greater than the previous year. Drawing and music are taught with success. In the high school, Latin, Greek, German, and book-keeping are optional studies.—(State report, 1875–'76, pp. 198–200.)

Reading.— Average monthly enrolment of pupils, 6,345; average daily attendance, 4,850. The course of instruction embraces primary, secondary, intermediate, grammar, and high departments. The high school course occupies a period of four years. There is an "English" course, with a choice of German and French, and a classical course including Latin, with the option of Greek, French, or German for boys, and French or German for girls. Nearly all the teachers in the employ of the board are graduates of this school.—(State report, 1875–'76, pp. 202, 203.)

Scranton.—Increased efficiency and success in school work are reported. Drawing has been added to the course of study; vocal music also receives attention.—(State report, 1875–'76, pp. 204, 205.)

Williamsport.— Attendance on public schools is steadily increasing; present number, 3,503. One of the greatest obstacles to the success of the schools is irregular attendance and tardiness. Number of pupils in the high school, 125. The district institute held 14 sessions; attendance of teachers, 90 per cent.—(State report, 1875–'76, pp. 211, 212.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The 9 State normal schools report for 1875–'76 a total attendance in normal departments of 2,999 students, of whom 1,789 were men and 1,210 women. Graduates in elementary course, 190, of whom 101 were men and 89 women; in scientific course, 1. Graduates intending to become teachers, 326, of whom 164 were men and 162 women. Number of men who received aid from the State as students, 833; of women, 732. Men who received aid from the State as graduates, 100; of women, 85. Volumes in libraries, 13,139; added during the year, 788; reviews and periodicals taken, 376; value of buildings and grounds, $1,021,352; total attendance in all these schools since State recognition, 27,258.

The oldest of these schools, that belonging to the second district, established in 1859, has had, during the 21 years of its existence, 10,846 students — 3,756 women and 7,090 men — and 397 graduates, 139 women and 258 men. All but 7 of the graduates have taught. Three of the 7 were deterred by death or some other unavoidable circumstance, and 2 of the remaining 4 are recent graduates who may yet teach. The record of the year indicates a condition of life and progress. Special efforts are made to do thorough work.

The twelfth district normal school, organized in 1861, graduated, in 1875–'76, 33 students, 15 men and 18 women. The year was prosperous. A decided advance was made in the study of vocal music, and there was an increased interest in drawing.

The fifth district normal school was organized in 1862. Its principal reports that notwithstanding the stringency of the times the year was a remarkably successful one and much progress was made. Graduates, 21, of whom 14 were men and 7 women.

The third district normal school, organized in 1866, graduated 24, of whom 18 were men. Notwithstanding the hard times the usual number of pupils were enrolled, the status of the school has improved, and the higher classes were larger than ever before.

The sixth district normal school, organized in 1869, graduated in 1875–'76 25 from its regular course, 11 men and 14 women of whom all but 1 received the State appropriation of $50, thereby pledging themselves to teach at least two years in the schools of the State. Its dormitory building, burnt in 1875, has been rebuilt and improved.

The first district normal school at Westchester, organized in 1871, continues to enjoy its usual degree of prosperity, having been but little affected by the general depression. Its patronage was, in 1875–'76, drawn from a wider range of territory than ever before. Graduates, 20, of whom all but 4 were women.

The seventh district normal school was organized in 1873. Graduates in 1875–'76, 27, of whom 11 were men and 16 women. The year was a prosperous one for the school, and the advancement of the pupils was satisfactory.

The tenth district normal school was organized in 1874. During the year 1875–'76 serious embarrassment was suffered from debt, the burden of which had been accumulating for some time. With this exception, the condition of the school was encouraging. Graduates, 6.

The ninth district normal school, established in 1875, graduated its first class in the summer of 1875–'76. The class numbered 4, all of them men.

The fact is mentioned in several of the reports of principals that many of the pupils who never graduate do excellent work, which should be taken into account when the cost of the schools is considered.

In respect to the permanency of women as teachers, Principal Brooks, of the second district normal school, remarks:

"It has been charged that the State loses money by the early withdrawal of the lady graduates of the normal schools from the avocation. The incorrectness of such a criticism may be seen from the following statement. The entire number of lady graduates of this school is 139; of these 4 are dead and 34 are married, leaving a balance of 101 now living and unmarried. The number of lady graduates now teaching or attending school is, as nearly as I can ascertain it, 95. It is thus seen that a larger proportion of them, aside from the necessity of withdrawing from school work on account of marriage, remain in the profession of teaching than of gentlemen, and it must be a very blind and stupid economy that does not realize the advantage to the State of putting this culture and educational training into the family and the social life of a neighborhood."—(Report, 1875–'76, of State superintendent, pp. lxxvii, 221–247.)

The Philadelphia city normal school for young women has a faculty distinguished for its culture and experience in the education of young women as teachers, and a course of study greatly enlarged, requiring 4 years for completion. The average attendance during the year was 774, from an average roll of 777. Graduates in 1876, 156. Since the establishment of the school in 1848, 1,981 pupils have been graduated. Total number registered during this period 4,833, of whom 2,333 have taught. A school of practice has been added to its other advantages. This will enable pupils to acquire, before graduation, experience in teaching and in the art of managing and governing.—(Report board of education of Philadelphia, 1875–'76, pp. 44–54.)

Normal training is also given in Lincoln University and in Monongahela College, New Castle College, and Waynesburg College.

TEACHERS' INSTITUTES.

County teachers' instititutes were held in 67 counties, an average number being present of 9,555 members out of a total membership of 13,523. The number of members present who were engaged in teaching in the public schools of the State was 10,712. Nearly all of these institutes continued in session 5 days; only 2 had as short a session as 4; 2 lasted 4½, and 1, that in Dauphin, which was held in 2 different towns, continued 10 days, 5 days in each town. There were 435 instructors and lecturers present, and 213 essays were read.

District and city institutes, also, were held in most of the larger cities of the State, with excellent results.—(State report, 1875–'76, pp. lxxv, lxxvi.)

EDUCATIONAL JOURNAL.

The Pennsylvania School Journal, always well and ably edited, and full of information and suggestion for the teachers of the State, has been continued during 1876, with even more than its wonted interest, one especially valuable feature having been an excellent series of papers on the educational exhibit at the Centennial.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The number of public schools in the State in which some of the higher branches were taught in 1875–'76 is given by the State superintendent as 1,889. The number of public high schools or departments is not given, but from various city reports in which the high schools are mentioned it appears that these schools are in excellent condition, nearly all reporting some indications of progress. Special returns from 12 of the principal cities give a total attendance of 1,646 pupils in their high schools, while in 6 other important cities the existence of such schools is indicated, but the attendance in them is not separately given.

PRIVATE SECONDARY SCHOOLS.

In 22 schools for boys, 23 schools for girls, and 34 for both sexes, outside of the public school system, there have been reported to this Bureau 6,927 pupils, under 515 teachers. Of these, 1,220 are in classical studies, 1,177 in modern languages, 442 preparing for a classical course in college, and 175 for a scientific course. Drawing is taught in 61 of these schools, vocal music in 49, and instrumental music in 55. Chemical laboratories are reported by 37, philosophical apparatus by 46, and libraries of 60 to 5,000 volumes by 25, the aggregate number being 56,097.

The State superintendent, in his report for 1875–'76, gives the number of academies and seminaries as 207, and that of private ungraded schools as 345. Pupils attending both these classes of schools, 27,565. Teachers employed, 1,060.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Nine preparatory schools and 23 departments report a total of 101 teachers and 2,303 pupils. Of the students, 949 were preparing for classical courses and 538 for scientific.

Four of the schools report chemical laboratories, apparatus for the illustration of natural philosophy, and gymnasiums. Seven have libraries, numbering from 250 to 3,000 volumes, and aggregating 7,750.

BUSINESS COLLEGES.

Ten business colleges report 44 teachers and 1,858 students. Ten of them were studying phonography, 17 telegraphy, and 1 French. All these schools teach penmanship and book-keeping, 9 the common English branches and correspondence, 2 the higher mathematics, 6 banking and commercial law, 1 political economy, 1 life insurance, 3 phonography, and 2 telegraphy. Libraries are reported by 5, having from 18 to 259 volumes, and aggregating 492.

SUPERIOR INSTRUCTION.

UNIVERSITY OF PENNSYLVANIA, PHILADELPHIA.

This is not a State university, in the sense of being sustained by public funds, but as the oldest and probably most influential of its class it naturally leads the others. It is supported by tuition and endowment, and is under the management of a board of trustees, of which the governor of the State is ex officio president.

The departments of instruction are those of the arts, of science, of medicine, and of law. All the students in the department of arts who are candidates for the degree of A. B. pursue the same studies during the freshman and sophomore years. For the remaining 2 years of the course a limited choice is permitted. The required studies are intellectual and moral philosophy; general mechanics and physics; English literature and American history; the elements of the history of civilization and of social and political science, and English composition and oratory. Each member of the class, at the beginning of the junior year, must also take three other studies, choice being allowed between Greek and German, Latin and French, and pure mathematics or advanced studies in history and English literature.

The degree of master of arts may be conferred on alumni of the university who are bachelors of arts of 3 years' standing, but after the year 1878 it will be only given those who show that they have pursued liberal studies since their graduation and shall present a satisfactory thesis.—(Catalogue, 1876–'77.)

OTHER COLLEGES.

Allegheny College, Meadville, (Methodist Episcopal,) embraces preparatory, classical, scientific, and biblical departments. Both sexes are admitted.—(Catalogue, 1875–'76.

Dickinson College, Carlisle, (Methodist Episcopal,) has established a scheme of 9 departments of study, and proposes to carry it out on the university principle of elective courses as the means will permit. The departments are: (1) moral science; (2) ancient languages and literature; (3) pure mathematics; (4) philosophy and English literature, including history and constitutional law; (5) physics, mixed mathematics, and the application of calculus to natural philosophy, astronomy, and mechanics; (6) chemistry and its application to agriculture and the arts; (7) physical geography, natural history, mineralogy, and geology; (8) modern languages; (9) civil and mining engineering and metallurgy. Those students who wish to obtain the collegiate degree are to devote the earlier part of their course, as heretofore, mainly to the elements of classical learning and the pure mathematics; for the latter part certain studies are made optional, and those who go through any of the prescribed special courses, as they may elect, as well as those who complete the classical course, are to be graduated A. B.—(Catalogue, 1875–'76.)

Franklin and Marshall College, Lancaster, (Reformed German,) aims to be a college in the old sense of the term. There are no optional courses of study, and no irregular students are received. The ruling object throughout is mental culture for its own sake. Franklin and Marshall Academy, under the control of the faculty of the college, prepares students for matriculation and also furnishes a complete academical course for those who do not propose to enter college. A theological seminary is also connected with the institution.—(Catalogue, 1875–'76.

Haverford College, Haverford College, (Friends,) embraces classical and scientific courses of study. The elective system has been adopted to a limited extent in the last year and a half of the classical course and in the last year of the scientific course.—(Catalogue, 1875–'76, and report of managers, 1876.)

Lafayette College, Easton, (Presbyterian,) embraces a classical department, the Pardee scientific department, including a general scientific course and technical courses, a post graduate department, and a law department.—(Catalogue, 1875–'76.)

Lehigh University, South Bethlehem, (Protestant Episcopal,) offers special facilities for giving a thorough education in civil, mechanical, and mining engineering, in chemistry and metallurgy. There is also a classical course, which includes instruction in French and German. By the liberality of the founder, Hon. Asa Packer, tuition is free.—(Catalogue, 1875–'76, and card, 1876.)

Lincoln University, Chester County, (Presbyterian,) embraces collegiate and theological departments, and a department with normal, preparatory, and business courses.—(Catalogue, 1874–'75.)

Mercersburg College, Mercersburg, (Reformed,) embraces preparatory and collegiate departments. Special attention is paid not only to the development of intellect but to the growth of Christian character, under the direct nurture and admonition of the church.—(Catalogue, 1875–'76.)

Monongahela College, Jefferson, (Baptist,) embraces preparatory, classical, and scientific courses, and ladies' English and normal departments.—(Catalogue, 1875–'76.)

New Castle College, New Castle, (non-sectarian,) was organized in 1872, and chartered with collegiate powers in 1875. It embraces courses in science, philosophy, ancient and modern languages, music, painting, drawing, book-keeping, and normal training.—(Catalogue, 1875–'76.)

Palatinate College, Myerstown, (Reformed,) embraces elementary, academic, and collegiate departments, the last having the following special courses of instruction: mathematics, classics, modern languages, history, natural sciences, philosophy, and fine arts.—(Catalogue, 1876.)

Pennsylvania College, Gettysburg, (Evangelical Lutheran,) embraces collegiate and preparatory departments, the latter covering 4 years, and including Latin, Greek, and German as a part of its regular course. German is used exclusively in the class-room during the junior and senior years.—(Catalogue, 1876–'77.)

Pennsylvania Military Academy, Chester, (non-sectarian,) unites with moral and mental education a thorough course of military instruction, both theoretical and practical. The physical exercise attendant upon the drills employs much of the time of recreation. The departments of study are collegiate and scientific.—(Circular, 1876.)

St. Vincent's College, near Latrobe, (Roman Catholic,) has 4 distinct courses of study, the theological, the philosophical, the classical, and the commercial, besides an elementary school for beginners. In all these courses special attention is paid to religious instruction.—(Catalogue, 1875–'76.)

Swarthmore College, Swarthmore, (Friends,) has in its course of study, classical, modern classical, scientific, and preparatory departments. Both sexes are admitted. Regular daily exercise in the open air is required of all. There is a gymnasium open daily for voluntary exercise.—(Catalogue, 1876–'77.)

Thiel College, Greenville, (Evangelical Lutheran,) was established for the Christian education of youth, both sexes being admitted. It has collegiate and academic departments, the course in the latter covering 3 years; in the former, 4.—(Catalogue, 1875–'76.)

University at Lewisburg, (Baptist,) embraces a collegiate department with classical and scientific courses, a preparatory department, and an academy. The last prepares for the Latin scientific course in college, for the preparatory classical course, for teaching in the common schools, and for business.—(Catalogue, 1876–'77.)

Ursinus College, Freeland, (Reformed,) embraces theological, academic, and collegiate departments. In its general system of education it endeavors to meet the wants of the age.—(Catalogue, 1876–'77.)

Villanova College, Villanova, (Roman Catholic,) embraces classical, scientific, commercial, and preparatory courses.—(Catalogue, 1874–'75.)

Washington and Jefferson College, Washington, (Presbyterian,) embraces preparatory and collegiate departments, the latter with classical and scientific courses, each of which covers 4 full years of study. In the classical course, the study of the Greek and Latin languages is made elective after the sophomore year.—(Catalogue, 1875–'76.)

Waynesburg College, Waynesburg, (Cumberland Presbyterian,) is one of the first colleges organized for the admission of both sexes, and a fair trial has shown that their association together as students subjects both to the strongest stimulus to exertion and to right conduct. The courses of study are preparatory, classical, scientific, normal, French and German, besides a female department and a ministerial course.—(Catalogue, 1876.)

The Western University of Pennsylvania, Pittsburg, furnishes us for 1875–'76 no catalogue or circular descriptive of its course of study; but it is understood from the Pennsylvania School Journal of February, 1876, that it has succeeded in securing, through the efforts of its respected chancellor, $200,000 for the erection of new buildings and increase of its facilities for instruction.

Westminster College, New Wilmington, (United Presbyterian,) includes classical, preparatory, and scientific departments. The classical course is the prominent feature in the college curriculum, and receives the most attention.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Reports have been received from 14 institutions for the superior instruction of women, having a total attendance of 1,134 students taught by 191 instructors. Of the students, 413 were in regular collegiate classes, 81 in partial and 6 in post graduate courses. Music is taught in 13 of these colleges, 12 specify vocal music, and 11 instru-

mental; 12 teach French, 11 German, 3 Italian, and 2 Spanish, 14 drawing, and 12 painting. Seven report apparatus for the illustration of chemistry, and 8 that for natural philosophy, 4 natural history museums, 2 art galleries, and 5 gymnasiums.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Pennsylvania State College, Centre County, heads, as such, the scientific institutions in the State. Its aim is to combine practical with theoretical culture in the higher departments of education, but especially to promote improvement in agriculture and the mechanic arts, and the application to these of the natural and abstract sciences. It is thus a scientific school of high order in the educational interests of industrial life, yet not excluding classical and literary studies. Young women are admitted to the same courses as young men, are subject to the same general rules, and on completion of their studies receive the same certificates and degrees.—(Catalogue for 1875–'76.)

The Towne Scientific School of the University of Pennsylvania, Philadelphia, aims to give a thorough technical and professional training to those who propose to engage in scientific and industrial pursuits. It has, besides a general course, special courses: (1) in analytical and applied chemistry and mineralogy; (2) in geology and mining; (3) in civil engineering; (4) in mechanical engineering; (5) in drawing and architecture.

A post graduate course in essentially the same lines of study has also been organized. Graduation in any one of the professional courses secures the degree of Sc. B.; in the post graduate course, that of Sc. M. The school is handsomely endowed and well appointed.—(Catalogue for 1876–'77.)

The Pardee Scientific Department of Lafayette College, Easton, has a general scientific course for those who wish to pursue the various branches of collegiate study without Greek or Latin, and technical courses for such as desire to prepare themselves for the thorough and scientific prosecution of industrial pursuits. These technical courses embrace: (1) engineering, civil, topographical, and mechanical; (2) mining engineering and metallurgy; (3) chemistry. There are also arrangements for post graduate special studies. The institution has ample apparatus for its work.—(Catalogue for 1875–'76.)

Lehigh University, South Bethlehem, was designed by its founder, Hon. Asa Packer, of Mauch Chunk, to afford the young men of the Lehigh Valley and elsewhere a complete technical education for those professions which had developed the rich mineral resources of the surrounding region. It affords, without charge for tuition, every facility for mastering the professions of the civil, mechanical, and mining engineer, and of the metallurgist and analytical chemist. Classical instruction is also given to those who wish to become lawyers, clergymen, physicians, editors, or to pursue any distinctively literary avocation.—(Registers for 1875–'76 and 1876–'77.)

Other scientific schools.— Scientific departments exist also in connection with Dickinson College, Carlisle; Haverford College, Haverford; Monongahela College, Jefferson; New Castle College, New Castle; Swarthmore College, Swarthmore; the University at Lewisburg; Villanova College, Villanova; Washington and Jefferson College, Washington; Waynesburg College, Waynesburg; Westminster College, New Wilmington, and the Western University of Pennsylvania, Pittsburg. A special course in analytic chemistry is also arranged for at Pennsylvania College, Gettysburg. The Pennsylvania Military College, Chester, is largely a scientific school, as is the Polytechnic College of Pennsylvania, Philadelphia. In the Franklin Institute and the Wagner Free Institute of Science, Philadelphia, scientific instruction is given by lectures on such subjects as light, astronomy, electricity, metallurgy, assaying of precious metals, and other practical topics.—(Catalogues of these institutions, with announcements and returns.)

THEOLOGY.

The course of study for the ministry in most of the theological seminaries, schools, and departments included in the following table is 3 years. Where a larger number of years is given, academic or collegiate studies preparatory to the theological are usually included. In some instances these reach to within 2 years of the time of graduation, as in the Moravian Theological Seminary at Bethlehem, and in the ministerial course of Waynesburg College, Cumberland Presbyterian. The study of the Holy Scriptures in their original Hebrew and Greek, the science of interpretation of these scriptures, Christian evidences, church history and polity, systematic theology, pastoral theology and sacred rhetoric, form the staple courses of these schools.

MEDICINE.

The medical department of the University of Pennsylvania, Philadelphia, the oldest and one of the most justly celebrated of the medical schools of the United States, presents no account of itself by circular or report to this Bureau for 1876. By its representative in a medical convention held at Philadelphia, June 2d and 3d, of that year, it advocated a graded course of medical study, in which the elementary branches should precede the practical; and in furtherance of which it was resolved that, in the hope of inducing students to prolong and systematize their studies, it was recommended to all medical colleges to offer students the option of three courses of lectures after a plan similar to the following: "Students who have attended two full courses of lectures on anatomy, chemistry, materia medica, and physiology, may be examined upon any of these subjects at the end of their second course. During their third course such students may devote themselves to the lectures upon the theory and practice of medicine, surgery, obstetrics, and diseases of women and children, upon which subjects only they shall be examined at the final examination for the degree of M. D., their standing, however, to be determined by the results of both examinations."—(Detroit Review of Medicine, July, 1876, pp. 500-504.) What action has been taken by the faculty on this change of plan does not appear.

Jefferson Medical College, Philadelphia, which in 1875–'76 had 505 matriculates and graduated 146, it may be seen from the table, has still further increased this large number of students, as well as added much to the value of its grounds, buildings, and apparatus, by the erection of a hospital adjoining the college. The course of instruction includes a carefully considered combination of didactic and clinical teaching, for the former of which ample means of illustration are employed, while for the latter it has now its own hospital and dispensary, with free access for its students to all the hospitals of the city.—(Announcement for 1876–'77.)

The Woman's Medical College, Philadelphia, is designed to afford to ladies over 21 years of age an opportunity for full medical instruction. It requires of its candidates for graduation a study of medicine for 3 years, 2 of which years must have been under the special supervision of a respectable practitioner, or under that of the college itself. The examinations may be after a plan similar to that sketched above in connection with the medical department of the university.—(Annual announcement, 1875–'76.)

The Hahnemann Medical College, Philadelphia, affords instruction, as its name implies, in the principles of the homœopathic school. Its obligatory requirements are the same with those of the principal medical schools of the country, but it recommends a three years' graded course, embracing in the first year the philosophical, in the second the theoretical, and in the third the practical studies of a medical course. Students choosing this graded course are required to pass an examination in the studies of the first class before they can be admitted to the second.—(Announcement for 1875–'76.)

DENTISTRY.

The Pennsylvania College of Dental Surgery, Philadelphia, has a faculty of 6 professors, who are assisted in the operative and mechanical departments by 2 demonstrators, with assistants. In order to meet the increasing demand for more thorough training, the faculty have added a spring and summer session to that of the fall and winter; attendance on the former to be held an equivalent for any private instruction, however good, but not to be considered a substitute in any way for the regular winter course. The candidate for graduation must be 21 years of age, and must have studied under a private preceptor at least 2 years, including his course of instruction at the college.—(Announcements for 1875–'76 and 1876–'77.)

The Philadelphia Dental College, Philadelphia, has also lengthened its lecture season from 4 to 9 months, embracing spring, fall, and winter courses. The spring and fall courses are meant to be introductory to the winter course, or supplementary of it, but not to be an equivalent for it. Conditions of graduation essentially the same as in the preceding school.—(Announcement for 1876–'77.)

PHARMACY.

The Philadelphia College of Pharmacy imparts instruction in chemistry, materia medica, botany, and the theory and practice of pharmacy. Candidates for graduation must be at least 21 ; must have attended two courses of each series of lectures delivered in this college, or one in this and one in some other respectable college of pharmacy, the last one in this; must have served an apprenticeship of at least 4 years with a qualified apothecary ; and must produce a neat and accurate original thesis, in their own handwriting, on some subject assigned them.—(Announcement for 1876–'77.)

LAW.

The Law Department of Lafayette College, Easton, has a course of instruction meant to extend over 2 years, and embracing general commentaries on municipal law, contracts, real and personal property, torts, elements of pleading and evidence, equity jurisprudence, practice, and criminal law. Lectures are delivered in each year on topics illustrative of the above course and necessary to a thorough and scientific preparation for practice. The instruction is by text books and recitations, supplemented by lectures and oral expositions, with moot courts each week, presided over by a member of the faculty.—(College catalogue for 1875–'76.)

The Law Department of the University of Pennsylvania, Philadelphia, presents a two years' course, similar to that above given and extending over the same period of 2 years. The scholastic year embraces 8 continuous months, from October 1 to April 1.—(Return to Bureau of Education for 1876.)

SPECIAL INSTRUCTION.

GIRARD COLLEGE FOR ORPHANS, PHILADELPHIA.

The sixth annual report of the board of directors of city trusts, covering the year 1875, but printed in 1876, showed 550 pupils in the three schools composing the institution for the former year. A written return for 1876 gives the number as the same, the present accommodations not admitting of any increase.

An appendix presents the course of study pursued in the three schools, beginning with the lowest elements, and running up, in the eight years and six months devoted to it, into the various higher English branches, with French, Spanish, and drawing.

OTHER ORPHAN HOMES.

In 21 homes and industrial schools for orphan children throughout the State, 1,672 pupils were reported in 1876 as under instruction in the common branches of an English education, with industrial training in many instances also.

In 16 others, mainly for the orphans of soldiers who fell in the civil war, 2,798 children were reported as being also under kindred training, making 4,490, exclusive of those in Girard College.—(Returns to Bureau of Education.)

REFORM SCHOOLS.

In the Pennsylvania Reform School at Morganza, and the colored department of the House of Refuge, Philadelphia, there are reported for 1876 a total of 345 children under training, 228 in the former, 117 in the latter institution.—(Returns to Bureau of Education.)

PENNSYLVANIA INSTITUTION FOR THE DEAF AND DUMB, PHILADELPHIA.

The new buildings of this noble school, noticed in the Commissioner's report for 1875, have so much increased its accommodations, that for the first time in many years its managers have been able to offer admission to all applicants. The number on the roll January 1, 1876, was 297, of whom 163 were males and 134 females; 14 supported by New Jersey, 5 by Delaware, 1 by the city of Philadelphia, 2 by scholarship funds, and 8 by parents or friends. A later return gives 352 as the whole number in December, 1876, the males being 202 and the females 150. The number of professors and instructors at the latter date was 18, one being a semi-mute. A library of about 5,000 volumes is an aid to instruction. Geography, history, arithmetic, and other common English branches are taught, and there is some apparatus for illustration of natural philosophy, also a museum containing many specimens of natural history.

The value of grounds, buildings, and apparatus is set at $500,000; the State appropriations from Pennsylvania at $63,963 for maintenance and $25,000 towards the new buildings; from New Jersey, at $3,634; from Delaware, $1,485. Income from tuition fees, $6,319. Expenditures: for maintenance, $80,039; for new buildings, about $167,000.—(Report for 1875 and return for 1876.)

WEST PENNSYLVANIA INSTITUTION FOR EDUCATION OF THE DEAF AND DUMB.

This new institution for the unfortunate, established in 1876, is at Turtle Creek, Allegheny County, not far from Pittsburg. It reports 3 instructors, 1 of them a semi-mute, with 36 pupils, of whom 22 are males and 14 females. Reading, writing, arithmetic, and geography are the branches at present taught. Agriculture was to be added in the spring of 1877. The buildings and grounds are rented. The State appropriation for 1876 was $16,000; the income from tuition fees, $200.—(Circular and return for 1876.)

The deaf-mute day school at Pittsburg, hitherto maintained by the city, has been discontinued since the establishment of this institution, and appears to have been absorbed into it.—(Letter accompanying return.)

PENNSYLVANIA INSTITUTION FOR INSTRUCTION OF THE BLIND.

Established in 1833 at Philadelphia, and since continued there, this school has since its opening instructed 915 pupils, and reports for 1876 a total of 207 pupils, with 34 instructors and employés, of whom 21 are blind. The course of study embraces all the branches of a good English education, with Latin, pin-type printing, and music. A plan is in agitation for imparting a considerable part of this instruction in the public schools, where it is thought that the blind may be taught with little more trouble than those possessed of sight. Music is taught not only in theory and by the notes, but on the church organ and the piano. The art of tuning and repairing pianos is also attended to. The industrial occupations engaged in are broom, brush, mattress, and mat making, caning of chairs, carpet weaving, knitting, crocheting, beadwork, hand and machine sewing. The products of these occupations for 1875 amounted to $14,938 for the males and $336 for the females in the school.

A portion of the pupils here, as at the institution for the deaf and dumb in Philadelphia, are from the States of New Jersey and Delaware, and are provided for by those States.—(Report for 1875 and return for 1876.)

PENNSYLVANIA TRAINING SCHOOL FOR FEEBLE-MINDED CHILDREN.

This school, established in 1871, at Media, for the benefit of feeble-minded persons who are friendless or entirely dependent, reported, for 1876, a total of 233 such under instruction, of whom 136 were males and 97 females. The branches taught are the primary ones of a common school education, with broom and mattress making, farm labor, and domestic duties. Instructors, 11. Income, $57,551, applicable to support of children; expenditures, $58,349. For a new building, $10,000 have been appropriated by the legislature.—(Report and return for 1876.)

OBITUARY RECORD.

PROF. GEORGE ALLEN, LL. D.

This gentleman, long professor of the Greek language and literature in the University of Pennsylvania, passed, May 29. 1876, into the other world. He was born December 17, 1808, at Milton, Vermont, and trained for college while still residing with his father, a lawyer of high standing and repute, and a member of Congress for several terms. Entering with advanced standing the University of Vermont in 1823, he was graduated in due course, apparently, in 1825, and began studying law in his father's office, then in Burlington. But in May, 1826, a college friend who had started an academy a few miles away was taken sick, and induced young Allen to take his place till the conclusion of the term. He proved so successful a teacher that in August of that year the trustees of the university, having given Professor Torrey, of the chair of languages, leave to travel in Europe for 18 months, invited the young graduate to fill the professorial chair till his return. This was done, not only with great benefit to his pupils, but also great improvement of his own already fine classical acquirements, he going over an immense amount of reading in the languages beyond the studies of his class. Resuming then his legal studies, he prosecuted them for some time, but finally changing his plan of life and resolving to enter the ministry, became a teacher in the Vermont Episcopal Institute, at Burlington, studying theology under Bishop J. H. Hopkins. Ordained a deacon in 1834, he took charge of a church in St. Albans, and spent there three happy years. But he was born to be a teacher, and after struggling for some time against his destiny, yielded, and became professor of languages in Newark College, Del., and subsequently, from 1845, in the University of Pennsylvania, where he continued till his death, securing the reputation of being one of the first teachers of the classics in America. In 1854 he took exclusive charge of instruction in the Greek language and literature, his adjunct professor, Mr. Jackson, taking the Latin.

Familiar, from long reading, with the choice Greek classics, and thoroughly devoted to the beautiful and harmonious tongue, he infused the enthusiasm he felt for them into his instructions, and enkindled in his pupils a sympathetic flame by his felicitous and charming renderings — renderings made still more delightful by reference to fine passages in modern writers, drawn from or meant to illustrate the ancient ones. His life was spent so largely in the study and the class room that the world at large knew little of the genial gentleman who was training for it some of the best scholars of the day. But his students well appreciated his fine teaching and enthusiastic ways, and he will long be remembered by them as a splendid instructor and a most lovable and noble man.—(An autobiographical sketch in the Pennsylvania Monthly, August, 1876, and an editorial in the Philadelphia Times, May 30, 1876.)

PROF. M. W. JACOBUS, D. D., LL. D.

Melancthon Williams Jacobus was born in Newark, N. J., September 19, 1816, of Presbyterian parentage. He was the eldest of six children, and had the best early Christian nurture. At 8 years of age he was studying Latin and Greek in Newark Academy, then under the charge of Abraham Van Doren and his three sons. At 14 he was transferred to the academy at Bloomfield, N. J., where he became, in the best sense, a Christian. At 15 he entered the sophomore class of Princeton College, and, although the youngest member of the class, carried off the highest honors each successive year till his graduation in 1834. In the autumn of 1835 he entered the theological seminary at Princeton, and here developed his taste for exegetical studies. At the end of the seminary course he was appointed tutor in Hebrew, as assistant to Dr. Joseph Addison Alexander, and devoted himself to the study of Arabic and Syriac, under the celebrated Orientalist, Dr. Isaac Nordheimer.

In 1839 he was licensed by the presbytery of New Brunswick to preach the gospel, and in the autumn of the same year was ordained and installed as pastor of the First Presbyterian Church in Brooklyn, N. Y., where he labored with eminent success for eleven years.

In the fall of 1850, his health having given way, he laid aside his work and spent a year in foreign travel, passing through Europe, Egypt, Palestine, and Syria as far as Damascus. During his absence the general assembly of the Presbyterian Church elected him professor of Oriental and biblical literature in the Western Theological Seminary, Allegheny City, Pa. He entered on the duties of this professorship early in 1852, and continued in the active discharge of them till his death, October 28, 1876, twenty-four and a half years.

In 1852 Jefferson College, Pennsylvania, made him a doctor of divinity, and in 1867 the College of New Jersey added to this the degree of LL. D. From 1856 to the fall of 1872 he held the pastorate of the Central Presbyterian Church of Pittsburg, visiting Europe again during this time, in 1866, and serving in 1869 as moderator of the general assembly of the Old School branch of the Presbyterian Church. In that capacity he had the pleasure of presiding at the organization of the reunited assembly, in Philadelphia, in 1870. The following year he was appointed by the general assembly corresponding secretary and treasurer of the board of sustentation, and held the office till May, 1874. In October, 1874, he went to Southern California for improvement of his health, returning to his duties in the seminary in September, 1875, with freshened strength. But long years of laborious study had told on him, as it usually does, and at the date above indicated the tasked brain avenged itself, and he broke down and passed off suddenly.

The chief publications of Dr. Jacobus were his commentaries on the sacred Scriptures. "Notes on the New Testament," extending through the Gospels and the Acts, were published with a "Catechetical Question Book," from 1848 to 1859, and were republished in Edinburg, Scotland, in 1862. "Notes on Genesis" followed, in 1864-'65, and "Notes on Exodus, from Egypt to Sinai," in 1874. Besides these he was the author of many articles in the Princeton Review and the American Presbyterian Review, with published sermons, tracts, and articles in newspapers.—(Letter from Prof. A. A. Hodge, D. D.)

LIST OF SCHOOL OFFICIALS IN PENNSYLVANIA.

(Report for 1875–'76 of Hon. Thomas B. Stockwell, State commissioner of public schools, pp. 53–59, and special reports to United States Bureau of Education, 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Bancroft's History of the United States, vol. 1, page 379; Barnard's Common Schools and Public Instruction, 1873; History of Rhode Island Institute of Instruction, by E. W. Stone, 1874, and Journal of the institute; History of Public Instruction in Rhode Island from 1836 to 1876, compiled and edited by Hon. Thomas B. Stockwell, State commissioner of public schools, 1876; Rhode Island School Laws of various dates.

ORIGINATION OF FREE SCHOOLS.

Entered in 1636 by Roger Williams and his fellow advocates for absolute religious freedom, it was long before Rhode Island, with its scattered colonists, had a settled government, or centres of population sufficient for the support of any true school system. Sixty-five years passed after Williams's entrance before the number of the settlers, exclusive of remaining Indians, reached 10,000; and almost one hundred before a census showed 17,935. As many of these were mere adventurers and many more were conscientiously opposed to any State control of education, no general law for the establishment of free schools seems to have been even thought of till 1790-'98. Individual towns took measures to secure for all or for a portion of their youth either a free or cheapened education—Newport in 1640, Providence in 1663, Barrington in 1673, Bristol in 1682—but a system for the State remained to be projected. Strangely enough the idea of it then came not from the leading citizens striving to lift up others toward their plane, nor from the people generally asking aid to raise their children to a higher level than their own, but from a man of humble origin and very slender training, who burned to give to others the educational advantages of which he keenly felt the need. This man was Mr. John Howland, born in Newport, and trained to be a barber and hair dresser in Providence. Of clear intelligence, sound judgment, and persistent will, he was, notwithstanding his origin, one of the born leaders of mankind. Uniting with others in 1789 in the formation of the Mechanics and Manufacturers' Association, Providence, he says himself that when he and his fellow members came together they became sensible of their deficiencies. There were papers to be written and records to be made that few of them were competent to undertake. Talking of this among themselves, the question came whether their children ought not be given better advantages for education. Of course, the answer was they ought to have them; and when the means by which these advantages could be obtained arose for consideration, nothing seemed plainer than that it must be through practically free schools, opened to all the children of the State through the united action of the legislature and the people. For such schools it was resolved that they should agitate, and Mr. Howland soon became chief agitator. He wrote a memorial to the legislature in favor of free schools, secured the adoption of it by the association, had it presented to the general assembly in 1799, and by active exertion of his utmost influence with the members and the people had the happiness of welcoming, in February, 1800, "An act to establish free schools." This act, remarkable for that period, provided for dividing every town into school districts; for establishing in each of these, and maintaining annually one or more free schools for the instruction of all the white inhabitants between the ages of 6 and 20 years in reading, writing, and common arithmetic; for continuing such schools through terms sufficient to secure all pupils a fair indoctrination in these elements; and for meeting the expense by a State allowance of 20 per cent. of the State taxes collected from each town, with a town provision for whatever remaining cost might be incurred.

Providence immediately took steps for establishing the schools provided for, bought or built 4 school-houses, engaged for each a master at $500, and an usher at $200 annual salary, and on the last Monday of October, 1800, opened them to her scholastic population. Thus free schools were originated, and were directly so abundantly attended that soon a fifth had to be added to the four first opened. From that time on there has been a growth and an expansion, Providence never failing to maintain her schools, which had grown to 51 in 1876, with a total enrolment of 13,240 pupils.

STATE RETROGRESSION.

Though the chief city of the State thus accepted the first school law, it proved to be beyond the public sentiment of other towns, and as there was then no officer to explain to the people its provisions, meet objections to them, and show the advantages which they would bring, an ignorant opposition from the smaller towns so far prevailed with the previously friendly legislature that the law was repealed in 1803, as respected the State generally, Providence being excepted at her own request. Things elsewhere fell back into their old order, and the discouraged friends of a free education for the people had to depend again, for twenty-five years longer, on private schools, proprietary schools, the free schools of benevolent societies, and Sunday schools, which at that time were for imparting to the poor the elements of education not obtainable by them dur-

ing the week. The proprietary schools were the nearest approach of all these to public schools, being the fruit of associations among friends and neighbors who taxed themselves voluntarily for the purchase of a lot, the erection of a school-house, the support of teachers, and the other expenses of a school, and then had a right in the property and to school privileges in proportion to the amounts contributed.

REVIVAL OF FREE SCHOOLS.

From 1820 up to 1827, there were signs of a gradually growing discontent with the paucity of educational advantages. The legislature, in 1820, called for information from the towns with reference to public schools, and could only get the statement that there were none except in Providence and to a very slight extent in Newport. In 1821 it appointed at its February session a committee to prepare and report a bill establishing free schools. The committee dallied with the subject for a year, and nothing came of it. But, as Newport desired to educate her poorer population, liberty was given her in June, 1825, to raise a tax of $800 "for educating the white children of the town not otherwise provided with the means of education." In May of the same year an act for raising a school fund for the State by lotteries was received and referred to the next session, in which, happily, it died. All these things showed a growing sense of the need of legislative action in favor of free schools, and in 1827 this was strengthened by memorials from several towns respectfully calling for such action. Accordingly, a bill for the establishment of a school system was introduced, appropriating $10,000 yearly from the State funds for free schools; allowing towns to supplement their portion of this sum by an annual tax agreed on at the town meeting, and requiring them at this meeting to appoint a school committee of 5 to 21 persons, who should make rules and regulations for the schools, appoint the teachers for them, visit them every 3 months, and generally superintend them, reporting to the town meeting every year. Only 2 members seem to have opposed the bill, and under the earnest advocacy of Mr. Joseph L. Tillinghast of Providence, Mr. Dixon of Westerly, and Mr. Potter of South Kingston, it passed the house at the January session of 1828, met with a favorable reception in the senate, and became a law.

From that time free schools have been the rule throughout the State,* and within little more than 5 years from the passage of the law a committee appointed to make inquiry as to the results was able to report 323 public schools in operation for sessions of 3 months to a year, employing 375 teachers, and instructing 17,034 pupils; while 118 private school teachers had under them 3,403 pupils in schools which, the committee said, were substantially continuations of the public schools by individual subscriptions.

MODIFICATIONS AND IMPROVEMENTS.

Free schools being thus once more established, all that was needed was to make them as respectable and good as circumstances would permit. Attempts in this direction sometimes proved failures, sometimes were real advances on what went before.

Of the former class was a change in the mode of distribution of the school money of the State, which prevailed from 1832 to 1845, and which, instead of going on the first plain basis of the number of inhabitants under the age of 16, went on the complex one of the number of white children in a town under 15 years of age, the number of colored children under 10 years, and five-fourteenths of all between the ages of 10 and 24, excepting Narragansett Indians.

Of the latter class have been: (1) An increase of the State appropriation to its schools from the $10,000 annually of the law of 1828, to $25,000 by a law of 1839, to $50,000 by a law of 1854, and to $90,000 in the general statutes of 1872. (2) The appointment of a State school agent in 1843 to visit and inspect the public schools, with a view to the improvement of their management and methods, and the raising of this agent to the commissionership of public schools in 1845, with a continuation of the office of commissioner till now. (3) A provision, also in 1845, for advanced instruction in the public schools where circumstances called for it. (4) A like provision, at the same date, for the formation of public school libraries accessible to all the inhabitants in any town, as well as to the teachers and pupils in the schools. (5) The establishment, in 1854, of a State normal school† to succeed two previous enterprises in that direction: first, a normal department in Brown University, established in 1850, and next, a private normal school set up in 1852, in Providence, under the same instructor as the former, with associates. (6) The institution, in 1870, of a State board of education, to aid the State commissioner with its counsels, and to have a general supervision and control of all

*It is said intentionally that they have been the rule, not that they have been universal, for, though called free in the law and meant to be such, it appears from Mr. Potter's reports that in many of the towns the State and town appropriations were insufficient, and that consequently rates were levied until a comparatively late period.—(See p. 81 of Education in Rhode Island.)

†This school was abolished under a mistaken impulse of economy in 1865, but was restored through the influence of Mr. Bicknell in 1871, and has done a good work in preparing improved teachers for the schools.

State schools, electing also annually the State commissioner. (7) The extension, in the revised law of 1872, of the term of school committees from 1 year to 3, with a provision for the changing of one-third of them each year. (8) The arrangement, in the same law, for the election of a school superintendent by each town, or, failing this, for the appointment of one by the school committee. (9) The requirement from the town school officers of reports as to the schools committed to their care; by the law of 1839, to the secretary of the commonwealth, and by those of 1845 and 1872, to the State school commissioner. (10) The encouragement of teachers' institutes, provided for in the law of 1845, and aided with $500 annually from the State by the revised one of 1872.

Besides these legal advances and improvements, there have been some coming from voluntary action, prominent among which was, first, the great influence for good of the meetings and papers of the Rhode Island Institute of Instruction from 1845; next, the kindred and aiding influence of three successive excellent school journals, beginning with 1845 and continued till the close of 1874.

There is no institution for special instruction belonging to the State. The deaf and dumb and the blind who need instruction are cared for by the State in institutions at Hartford, Conn., and Boston, Mass. A reform school for boys is sustained by the city of Providence.

The agricultural and mechanical college of the State forms the scientific department of Brown University, Providence.

SUPERVISION.

The State has been happy in its chief school officers. At least four of them have been men of much more than common mark. Mr. Henry Barnard — since Dr. Barnard, and first United States Commissioner of Education — brought to his work of State school agent, 1843–'45, and to that of State commissioner of public schools, 1845–'49, a large educational experience and information, and a great power of influencing and moving men. The Hon. Elisha R. Potter, who succeeded him, 1849–'54, was a lawyer of large culture and ability, and was thus able substantially to settle for Rhode Island the much vexed question of religion in the schools, with which other States have been often greatly agitated. Their successors, of whom two achieved also a lasting reputation, while all are well known as honorable men, have been Rev. Robert Allyn, 1854–'57; John Kingsbury, (long president of the Rhode Island Institute,) 1857–'59; Dr. Joshua B. Chapin, 1859–'61; Henry Rousmiere, 1861–'63; Dr. Chapin again, 1863–'69; Thomas W. Bicknell, 1869–'75; Thomas B. Stockwell, 1875–'76.

ELEMENTARY INSTRUCTION.

IMPROVEMENT IN METHODS OF TEACHING.

The commissioner thinks that the character of the work performed in the schools in 1875–'76 has been unequaled in the past; that the schools were never in so progressive a condition as at present; and that the nature and extent of the work done in them was never so satisfactory.

Certain points are especially mentioned in which improvement has been made; among them are the character and style of reading in the schools. Reading is made more of a study on the part of both teacher and pupil, and thus it is changed from a mere pastime or mechanical performance into an exercise productive of a genuine culture. The various exercises which have been given by distinguished elocutionists at the sessions of the State Teachers' Institute have awakened a very general attention among the teachers, and they are beginning to realize the extent of this field as never before. Reading as the expression of thought is now the objective point, and the pupil's mind is directed to that end.

Geography is another study in which a few years have made great changes in the mode of instruction. Map drawing is now regarded as the best test of the pupil's knowledge of locality, of relative position, and of general form. Moreover, it is not now considered necessary for a child to know the geography of the eastern continent with the same minuteness as the western, and the questions of relative value and significance are allowed to determine what shall be taken and what left.

Another step in advance is seen in the manner of teaching grammar. Grammar as a science is giving way to language as an art. Attention is more generally given in the mixed schools and those of the intermediate and lower grammar grades to the art of expression than to the science of construction. Pupils are taught *how* to say what they wish rather than *why* it should be said thus, the latter work being left for the time when their minds shall be better fitted to discuss such questions.—(Report of State commissioner, 1875–'76, pp. 63–67.)

FINANCES.

The financial exhibit for the year is considered quite satisfactory. The decrease in expenditures is mainly in incidentals and in sites and buildings. There have been fewer new buildings erected than for a number of years; but, as several of these are in

Providence, the total cost is swelled to quite an amount. Even there, however, the cost of a building for a graded grammar school is reduced more than one-half, while in other parts of the State there has been a disposition to put off expenditures of this kind to a more convenient day. The increase in the cost of instruction is due, first, to the greater length of the school year; second, to the greater permanence of teachers, who from that cause have in some cases received a slight increase of pay; and, third, to the establishment of a larger number of graded schools, making necessary a greater number of teachers.—(State report, 1875–'76, pp. 81–83.)

EVENING SCHOOLS.

The decrease in attendance at evening schools would have been much less had it not been for fires at Woonsocket, by which the day schools were compelled to occupy quarters usually devoted to the evening schools. And yet there is not that degree of interest throughout the State in this branch of the work which its importance demands. While in many towns evening schools have so far won their way as to obtain recognition and to become an integral part of the system, in other communities (and some of them the most populous and important ones) they are turned off without the slightest consideration. Throughout the State there has been a decrease of 24 such schools within two years.—(State report, 1875–'76, pp. 83, 84, and statistical returns.)

FREE PUBLIC LIBRARIES.

Since the passage of the act in relation to free public libraries, giving them State aid under such rules and regulations as the board of education should prescribe, a great addition has been made to the available means of diffusing useful knowledge among all classes. During the past year 8 libraries have received State aid, 4 of them to the amount of $125 each, and the remaining 4 only $50 each. The maximum amount of aid from the State for any one library during any one year has been fixed at $125.—(State report, 1875–'76, pp. 17, 18.)

NEED FOR AN INDUSTRIAL SCHOOL.

Several towns have taken the proper steps, under the State law, to enact a suitable truant ordinance, but in each case they have met the insuperable obstacle of a lack of any proper place for the reception and training of their truants. The law, then, can be of no effect until the State shall establish for their use an industrial school such as it provides they shall be sent to. This school, says the commissioner, should be a home for the children, formative rather than reformative, in which life shall be made to correspond, as far as circumstances will admit, to the home life of the average child. The aim of the school should be, first, to provide each pupil with a good elementary education; and, secondly, to equip him with the means of acquiring a livelihood. The industrial element, should be a recognized part of the instruction of the school, and the objective feature of the labor the acquisition by the pupil of exact knowledge of a trade rather than the profitableness of his work to the institution.

The subject of class instruction in actual labor in the various trades and branches of applied art is in its infancy. What is feasible and what is not is a question to be settled only by trial. The general problem has had very great light thrown upon it by the exhibition at the Centennial of the work of the technical schools of Russia. These schools claim that instruction can be given by the class system in the different departments of the mechanic arts. If this be so, the great question is settled, and it only remains to decide what trade or trades will be most suitable, all the circumstances and conditions being taken into account.—(State report, 1875–'76, pp. 100–105.)

ILLITERACY AND ITS CURE.

The people are being aroused to at least a partial appreciation of the magnitude of the question involved in the figures of the late census. Out of a population of 205,101 of the age of 10 years and over, there are 24,168 who are unable to write their own names, while of this number only 7,941 are able to read at all; that is, one person in every 8.48 of the population cannot write his name, and one in every 13.84 can neither read nor write. Moreover, while the population has increased about 40 per cent., illiterates have increased over 63 per cent.; and out of a school population of 53,316, who should all be accounted for at some school, at least 8,000, (or one in every 6.5,) and probably more, are not in attendance upon any school, either public or private, or subject to any instruction, but are, most of them, employed in various manufacturing establishments. More than 82.5 per cent. of this illiteracy and this labor of children in shops, it is estimated, is furnished by the French-Canadian and Irish elements of the population.

This condition of affairs, it is believed, results chiefly from the fact that Rhode Island is the only State in New England that does not make the attempt at least to enforce the educational rights of minors. Practically an asylum is here offered to every mercenary parent who is willing to barter the precious opportunities of his children's earlier years for a few paltry dollars. On either side stand Connecticut and Massachusetts

saying to their citizens, "You cannot place your children at work unless you first give them at least 12 weeks of schooling;" while Rhode Island virtually says, "Come, you may place your children at work as early and keep them at it as long as they can perform the least labor." True, a law has been in existence in the State for more than 20 years forbidding the employment in any manufacturing establishment of minors under 12 years of age and of all under 15 unless they shall have attended school for a term of at least 3 months the previous year, and imposing a fine of $20 on all employers and parents who shall knowingly and wilfully violate the law. Being in advance of public sentiment, this law has been practically a dead letter. To make it efficient two amendments are required: (1) The words "knowingly and wilfully" must be stricken out, since their effect is to render conviction almost impossible; and (2) some person or persons must be clothed with the power and the duty of making such regular inspection as shall disclose all cases of infringement and of instituting the necessary legal measures to secure compliance. With these changes in the law, the commissioner believes that the amount of absenteeism may be so diminished as to render its complete extinction possible.—(State report, 1875–'76, pp. 92–99.)

CITY SCHOOL SYSTEMS.

NEWPORT.

Officers.— A school committee of 12 members elected for terms of 3 years, part going out each year, and a city superintendent appointed by the school committee.

Statistics.— Population of the city, 14,028; children, (5–16 years of age,) 2,807; enrolment in public schools of children under 6 years, 93; between 6 and 16 years, 1,818; over 16 years, 195; total enrolment, 2,116. Estimated enrolment in private and parochial schools, 656. Average daily attendance in public schools, including evening schools, 1,802. Number of teachers, 51. Salaries of teachers, $400 to $3,500 annually. Number of days the schools were taught, 195. Estimated value of property used for school purposes, $203,406. Expenditures for school purposes, $63,675.

Remarks.— Gradation in every department, from the subprimary to the senior class of the Rogers High School, now prevails. Scholars of the graduating class of 1876 have passed through every grade by required examination. The teachers believe that better order prevails in the schools than in previous years; but few cases requiring severe discipline, and only two cases of expulsion have occurred.

The evening school, on Clarke street, in point of interest, was more successful the last year than during any previous one. The school is graded, the several departments being primary, intermediate, grammar, and book-keeping. The school opened with 91 pupils and closed with 214 on the roll. The other evening school does not show so large a number enrolled, but those who were interested in learning were very regular in attendance.

The Rogers High School continues to attract the attention of persons advanced in scholarship, whose lives have been devoted to literature and science. They visit it frequently, encouraging its methods, recognizing the necessity of such an institution, and from knowledge, placing it beside similar schools of our own and foreign countries, with most favorable comparison. Classical and scientific studies are particularly regarded as a basis of education, but equal thoroughness is required in French, German, moral philosophy, political economy, English literature, composition, declamation, drawing, music, &c., while reviews in previous school work covering the requirements to enter the school are of frequent occurrence. The number of pupils enrolled was 20 per cent. more than that of the previous year. Half the members of the graduating class had been in special courses.—(State report, 1875–'76, appendix, pp. 33, 93, 95, and return to Bureau of Education.)

PROVIDENCE.

Officers.— A school committee of 6 from each of the 10 wards, elected for terms of 3 years, one-third going out of office each year, and a city superintendent of schools, appointed by the committee.

Statistics.— Population of the city, over 100,000; children of school age, 19,177. The number of pupils registered during the first 5 months of the school year was 11,713, of whom 439 were received into the high school, 3,286 into 11 grammar schools, 2,725 into 31 intermediate schools, and 5,263 into 36 primaries. During the latter half of the year 11,430 pupils were registered. Of these, 394 were received into the high school, 3,196 into the 11 grammar schools, 2,686 into 32 intermediate schools, and 5,154 into 36 primaries. Whole number enrolled in public schools, 13,240; in private and parochial, 4,141.

Remarks.—The school committee report that the gradation and classification of the schools have now been brought very near perfection. The subject of the ventilation of the school buildings is receiving careful attention, there being several in the city so ill ventilated as to be dangerous places of confinement. Vacation schools were maintained during the summer, and did a good work. The 7 evening schools which were in successful operation during the winter had an enrolment of 2,110 pupils, and an

average attendance of 970. The course of instruction in the high school comprises 3 departments, the classical, English and scientific, and girls' department.—(Report of school committee, 1875–'76, Daniel Leach, superintendent, and return to Bureau of Education.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

The object of this school is to enable those who are to teach to prepare for their work. A two years' course of study has been prescribed by the board of education. Graduates of high schools usually finish the course in less than two years. All candidates for graduation must pass a satisfactory examination in writing in the prescribed studies. An advanced course in Latin, Greek, French, German, mathematics, and natural science has been authorized.—(Circular for 1876.)

The year 1875–'76 was one of marked success in work, both in the thoroughness of the instruction given and in the earnestness of the pupils. More was accomplished in some departments than during any preceding year. It has been the main aim to secure a thorough knowledge of the studies ordinarily pursued in the common schools and skill in teaching such studies according to the natural method. During the past year, more than ever before, instruction has been given in those branches which are of great value in themselves, and which directly aid in the acquisition of the ordinary common school branches. The instruction in elementary drawing was more complete and satisfactory than ever before, and the lessons upon plants were much more extensive and thorough.

The standard of admission has not been materially changed, but the requirements for graduation have been increased, so that now the normal diploma means much more than formerly, and as much as that of any similar school in the country. Number of pupils in attendance, 144. Of these, 13 had previously taught.—(State commissioner's report, 1875–'76, pp. 26, 39.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

During the past year the attention of the people has been called in various ways to the subject of the so called "higher education" and "high schools." Such schools have been the target for many attacks, both on the part of those who are unable to avail themselves of their advantages, and of those who, though able, choose other means of giving to their children the proffered culture. It is believed, however, that with all the agitation of the subject, there has been a steady growth in the right direction throughout the State. The number of towns where the opportunities for securing this broader education are more or less completely provided is constantly increasing. The means by which these results are accomplished are varied, being determined largely by circumstances. In some places it is by the wise addition of certain studies to the curriculum already existing, while in others a new grade is formed. In general, it is believed, there is a growing disposition on the part of those who have the interests of the schools in charge to render them better fitted to produce truly educated men and women than they have proved heretofore.

The number of towns which this year report high schools, or schools of an equal grade, either public or private, is 14. They are Providence, Newport, Bristol, Barrington, East Greenwich, East Providence, Hopkinton, Lincoln, New Shoreham, Pawtucket, Scituate, Warren, Westerly, and Woonsocket. At the last named place a new and beautiful building for the high and grammar schools was erected in 1876. The high school here has 3 courses, one called the collegiate, intended to fit pupils for college; another called English and classical, embracing some French and Latin; and a scientific course, wholly English. At Providence there is a classical course, an English and scientific, and a girls' department, which embraces Latin. In the Rogers High School, Newport, there is a general course of 4 years, apparently the same for all in the first year, but with classical and scientific divisions in the 3 succeeding years.

Statistics as to enrolment and attendance in the high schools are greatly lacking.—(State report, pp. 89–91, 145, and city report of Providence for 1875–'76, with first report of Rogers High School.)

PRIVATE SECONDARY SCHOOLS.

In 4 schools for girls, and 3 for both sexes, outside of the public school system, there have been reported to this Bureau 358 pupils, under 44 teachers. Of these, 107 are in classical studies, 109 in modern languages, and 14 preparing for a classical course in college. Drawing is taught in 4 of these schools, vocal music in 6, and instrumental music in 5. A chemical laboratory is reported by 1, philosophical apparatus by 2, and libraries of 500 to 3,000 volumes by all, the number of volumes aggregating 8,400.—(Returns for 1876.)

PREPARATORY SCHOOLS.

Five preparatory schools report a total of 44 teachers and 253 pupils. Of the pupils, 217 were preparing for classical courses, and 36 for scientific. Four report chemical

laboratories and apparatus for the illustration of natural philosophy; 1 has a gymnasium, and 4 have libraries of from 500 to 2,500 volumes, and aggregating 4,600.

BUSINESS COLLEGES.

Three business colleges report a total of 19 teachers and 666 students. Four of the pupils were studying phonography and 5 telegraphy. The common English branches, penmanship, and book-keeping were taught in all; banking and commercial law in 2, and life insurance, phonography, and telegraphy in 1. Two report libraries of 150 and 3,000 volumes.

SUPERIOR INSTRUCTION.

BROWN UNIVERSITY.

Besides the classical, philosophical, and special courses, departments of practical science have been established for the benefit of students who wish to prepare themselves for such pursuits as require especially the knowledge of mathematical and of physical science and their applications to the industrial arts.

The course for the degree of A. B. will hereafter be somewhat modified, so as to allow the student a wider selection of studies. There are 3 parallel courses of instruction of candidates for the degree of Ph. B., each extending through a period of 4 years. Two of these include classical studies; the third omits them and substitutes a larger amount of scientific studies.

Among the various forms of aid offered to students there are about 100 scholarships, the capital of 60 of them being of $1,000 each. There is also a fund of something over $8,000 which was given to the university by two of its friends. The income from it is applied, either by loan or by gift, to the assistance of deserving young men of limited means.—(Catalogue, 1876–'77.)

SCIENTIFIC INSTRUCTION.

BROWN UNIVERSITY.

The national grant for the benefit of agriculture and the mechanic arts was given to Brown University, and the fund of $50,000 which has accrued from this grant is by agreement on the part of the university devoted to the education of scholars, each at the rate of $100 a year, to the extent of the entire annual income. Appointments to these scholarships are made, on the nomination of the general assembly, by the governor and secretary of state in conjunction with the president of the university.

The instruction in agriculture embraces zoölogy and comparative anatomy, illustrated by specimens from the museum of natural history, with field excursions for practical instruction in obtaining and preserving specimens and in taxidermy.—(University catalogue, 1876–'77.)

Brown University provides also a regular course in civil engineering of 3 years. The first year is mainly preparatory. Students desiring admission to this course are subjected to an examination on the same amount of mathematics as is required of candidates entering for a degree.

Besides the above, there is a course in chemistry as applied to the arts, embracing first analytical chemistry and then its practical applications.—(Catalogue for 1876–'77.)

SPECIAL INSTRUCTION.

PROVIDENCE REFORM SCHOOL.

This is an institution under municipal management for the literary, moral, and industrial training of children who need restraint and reformation as well as instruction. The number of inmates at the close of 1876 was 218, of whom 182 were boys and 36 girls. During the year 120 were committed and 134 discharged.

The school hours are from 5 to 7, morning and evening, and the studies are reading, writing, spelling, arithmetic, geography, and history.

In the industrial department the boys are taught cane seating and the girls sewing, and about one-eighth of the annual expense of the institution is paid by the work done.

There is a library of about 2,000 volumes, with an increase of some 50 volumes a year. About 75 per cent. of those discharged are believed to have become useful members of the community.—(Report for 1875 and return for 1876.)

EDUCATIONAL CONVENTIONS.

RHODE ISLAND INSTITUTE OF INSTRUCTION.

The annual meeting of the Rhode Island Institute of Instruction was held at Providence January 13, 14, 15, 1876. On the morning of the 13th the city schools and the State normal school were thrown open for the inspection of teachers and friends of education from abroad, affording an unusually good opportunity for observation and examination of methods and results.

Papers were read and addresses delivered by Prof. J. L. Dinman, of Brown University, on "Spanish artists;" by Mrs. Maria T. Richards, on "Milton;" by President Chadbourne, of Williams, on "The school room and the world;" by David W. Hoyt, president of the institute, congratulatory; by Hon. T. B. Stockwell, commissioner of public schools, on "The Centennial;" by William A. Mowry, of Providence, insisting that the schools should teach the principles of our Government and the duties of American citizenship; by Rev. C. J. White, of Woonsocket, on "The better education of the masses, and how to secure it;" and by J. Milton Hall, of Providence, on "What should be taught in geography." Brief addresses were also delivered by his excellency Governor Lippitt, his honor Mayor Doyle of Providence, Rev. C. J. White of Woonsocket, Hon. N. Van Slyck, Rev. H. W. Rugg, president of the Providence school committee, and by Hon. T. B. Stockwell, commissioner of public schools.

Governor Lippitt said that the education of the masses is necessary to the safety of the nation, and lies at the foundation of the prosperity of the country; and that every boy and girl should have the means of a good common school education, and he further expressed himself as in favor of the enactment of a compulsory school law.

The papers and addresses were followed generally by interesting discussions, and the exercises were varied by singing and the reading of selections. In the primary department exercises were given in object teaching, and in methods of teaching reading, arithmetic, and other studies, all of them conducted by women.

This session of the institute was the largest, best attended, and most interesting one ever held in the State.—(New-England Journal of Education, January 23 and 29, 1876.)

MEETINGS OF SCHOOL SUPERINTENDENTS.

The regular quarterly meetings of the town superintendents of public schools were held in January, March, June, and September, 1876, at the office of the State commissioner of public schools, Providence. Some of the questions discussed at these meetings related to language and grammar, the indispensable qualifications of a teacher, what can be done for the moral and religious condition of our common schools, and what means can be adopted to secure a better observance of the laws of this State relating to the employment and schooling of children.—(New-England Journal of Education for January 15, June 24, March 25, and September 16, 1876.)

LIST OF SCHOOL OFFICIALS IN RHODE ISLAND.

Hon. THOMAS B. STOCKWELL, *commissioner of public schools, Providence.*

STATE BOARD OF EDUCATION AND TRUSTEES OF STATE NORMAL SCHOOL.

Name.	Term expires.	Post-office.
His excellency Henry Lippitt, governor, ex officio, president		Providence.
Henry T. Sisson, lieutenant-governor, ex officio		Little Compton.
Samuel H. Cross	June, 1879	Westerly.
Thomas H. Clarke	June, 1879	Newport.
Charles H. Fisher, M. D	June, 1878	North Scituate.
Rev. George L. Locke	June, 1878	Bristol.
Rev. Daniel Leach	June, 1877	Providence.
Ezra K. Parker	June, 1877	Summit.
Thomas B. Stockwell, commissioner of public schools, ex officio secretary.		Providence.

List of school officials in Rhode Island—Continued.

SUPERINTENDENTS OF SCHOOLS.

[Term, 1876–'77.]

Town.	Superintendent.	Post-office.	Salary.

*No appropriation from that fund appears to have been made for 1874–'75. The figures in the Peabody report for 1876 indicate an allowance for the year of $5,000 to this State, but all may not have been paid over at the date of this report.

(Reports for 1874–'75 and 1875–'76 of Hon. J. K. Jillson, State superintendent of education, pp. 5–12, with return for 1874–'75.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Barnard's Common Schools and Public Instruction, 1873; Cooper's Statutes of South Carolina, vol. 2, pp. 342–346, 389–396; vol. 5, pp. 639–641; McCord's continuation of the same work, vol. 6, pp. 50, 197, 225–229, 378, 529–530; Constitution of 1868; Reports and School Laws from 1870.

COLONIAL BEGINNINGS.

As early as the 8th of April, 1710, "An act for the founding and erecting a free school for the use of the inhabitants of South Carolina" was passed by the colonial assembly. This act provided for a board of commissioners to carry it into effect, to be a body politic and corporate with perpetual succession, and with power to hold property, to take up lands by grant for such a school, or purchase them, at their discretion, "for the use and conveniency of the several masters and teachers;" to build upon the same a school-house, dwelling houses, and outbuildings; to appoint a master under the title of "preceptor and teacher of grammar and other the arts and sciences to be taught in the school for the province of South Carolina;" to prescribe rules for the school, and to have power to visit and inspect it, redressing all disorders, and dismissing or suspending, for due cause, any one employed in it. An usher might be appointed to assist the master, if the commissioners thought fit, and a fit person to teach writing, arithmetic, and merchants' accounts. All gifts and legacies formerly bestowed for the use of a free school for the province were by the act given to the school thus prepared for, and, with the lands and buildings secured for it, were to go toward its support.

December 12, 1712, this act was repealed, and another, making essentially the same provisions, with some additional ones, was passed, locating the school at Charleston, and assigning a master to it, but giving the commissioners power to nominate and appoint his successors, with only the limitations that they must be members of the Church of England, competent to teach Latin and Greek, and to instruct youth in the principles of religion as professed in the church of which they must be members. Persons contributing within seven years £20 toward the founding of the school were to have power to nominate a pupil to be "taught free" in it for the space of five years after such gift, and every additional £20 up to £400 carried with it the same privilege. In consideration of having the use of the lands and buildings, and a salary of £100 per annum, the master was to teach freely and without any manner of fee or reward whatever over and above the free scholars on the £20 basis, any number of scholars, not exceeding twelve, to be nominated and appointed by the commissioners. For any scholar beyond the free ones thus provided for the master was to have £4 per annum from the parent or guardian.

In case of need, the commissioners might appoint an usher at a salary of £50 per annum, with 30 shillings per annum additional out of the master's £4 for every pay scholar he might have to teach. A teacher of writing, arithmetic, and accounts was again provided for, but with the addition that he must also be able to teach navigation, surveying, and other mathematical branches. He, too, was to have £50 a year, with additional fees for each pay scholar taught, these rising, according to the branches of instruction, from 30 shillings to £6 a year.

As a further encouragement to general education, the same act authorized the payment from the public treasury of £10 annually toward the support of any teacher settled or to be settled in any parish of the province, and approved by the vestry of the same, together with £12 towards the building of a school-house. On this slender basis several schools similar to the above, but probably of smaller proportions, are said to have been established.

EARLY STATE FREE SCHOOLS.

On the 21st of December, 1811, the general assembly of the State enacted that immediately after the passage of the act there should be established in each election district of the State a number of free schools equal to the number of members which such district was entitled to send to the house of representatives in the State legislature. In each of these schools were to be always taught the primary elements of learning, reading, writing, and arithmetic, with such other branches of education as should be from time to time directed.

Any citizen of the State was to be entitled to send child or children, ward or wards, to any such free school in the district where he or she might reside, free from any expense whatever, on account of tuition. But where more children should apply for admission than could be accommodated in a school, preference was always to be given to poor orphans and the children of indigent parents.

For the support of each of these free schools $300 annually was to be paid out of the State treasury till other sufficient funds should be by law provided. For their management there were to be appointed by the legislature from 3 to 13 commissioners in each election district, to continue in office for 3 years or till their successors should be

appointed. The commissioners were to designate each school by name or number, and to give their orders for the public money according to such designation; were to keep them open for an annual session of 12 months if possible; if not, for as long a session as the funds allowed them would permit; might make them peripatetic if circumstances should require it; and might unite them with any already established schools within their district, if that would better promote the purposes of the act. An annual report respecting them was to be made to the legislature.

In 1815, $37,000 were appropriated for the support of these free schools, and commissioners were authorized to draw on unexpended balances, an authority renewed in 1816. But in 1819 this liberty was restricted to such as should have made returns to the legislature according to law. Still further guards were added in the years 1822 and 1823, when a fine of $50 was imposed on all members of boards of commissioners who should fail to make returns, while they were also made liable, individually and collectively, for any sums of money not accounted for in their returns. In the same year $37,000 again appear as appropriated to free schools, with authority to draw on unexpended balances; but finally such balances were ordered to be retained in the State treasury if not drawn upon within two years from the time of appropriation. December 19, 1835, commissioners who should refuse to serve were ordered to be fined $20 for such refusal, and any who should neglect to meet their fellow commissioners without sufficient reason or excuse were to be fined $5 for each offence, such fines in all cases to go to the free schools of their districts. At the same date a division of their duties was provided for, one commissioner being given the superintendence of a school division in his district or parish, with $20 to $50 penalty for neglect of duty or abuse of powers, the same penalty being imposed on each member of a board that should as a board neglect the duties imposed on it by the State. They were also at this time forbidden to appoint teachers without such examination as should give assurance of their qualification. And each board was directed to appoint 3 trustees for each school in its district or parish, such trustees to aid the commissioner in supervision of the school and to recommend applicants for admission.

These enactments in their succession plainly show that the State was among the earliest to establish really free schools, that she was ready to do her duty as to the support of them, and that she meant to have the officers whom she appointed for the care of them do their duty also in the premises. The amount which appears to have been appropriated for them shows, however, that not more than 123 of them could have existed unless other than State funds were allotted to their maintenance, while concurrent statements from various quarters make it pretty sure that they were few, and that their influence on the white population, for whom alone they were intended, was comparatively circumscribed. This probably was due in some degree to the largeness of the estates in all the low country and to the consequent sparseness of the white population there; in some degree also to the fact that family schools on the plantations could be generally afforded by the planters, and were hence generally kept and made quite good. But the main reason seems to have been that the fact of the free schools having primary reference to the education of the poor kept others very much from entering them, and confined them largely to the whites of lower class.

STEPS TOWARD A BETTER SYSTEM.

In 1843, and again in 1846, and subsequently, Mr. Henry Barnard, of Connecticut at the request of Governor Allston and others, set forth a scheme for public schools avowedly open to all classes, and meant for the children both of rich and poor, having all the recommendations of good school-houses, classified studies, and intelligent and constant supervision. The scheme was received with favor by the gentlemen to whom it was addressed, but was too far in advance of public feeling at that time for adoption by the State at large. Under the lead, however, of Hon. C. C. Memminger and Jefferson Bennett, two large minded citizens of Charleston, a public school on this basis was opened in that city July 4, 1856, was followed by another of higher grade, and this by a normal school for female teachers for the State. These schools, by their pleasant buildings, excellent equipment, classified arrangement, and skilful instruction under teachers brought in from the North, were fast revolutionizing public sentiment in South Carolina when the fires of another revolution burst upon the State, December, 1860, and for the time swept schools and school laws quite away.

POST BELLUM SCHOOLS FOR ALL.

When the flames of war had been extinguished, and the reception of the Southern States again into the Union was proposed, a system of free education for all children, not only rich and poor, but also white and black, was made an indispensable prerequisite. South Carolina accepted the condition, and in her constitution of 1868 directed that the general assembly should as soon as practicable provide for a liberal and uniform system of free public schools throughout the State, making provision also for the division of the State into suitable school districts, one or more schools to be kept open at least six months in each year in every school district. The supervision of the

schools was directed to be given to a State superintendent of education, to be elected by the qualified voters of the State, and to a school commissioner to be chosen biennially by the people in each county, these county commissioners to constitute a State board of education, of which the State superintendent should, ex officio, be chairman. The means for supporting the school system were to come from an annual State tax on all taxable property in the State for school purposes, from a tax of $1 yearly on each head, and from the interest on a State school fund. A State normal school was to be established within 5 years, and provision was to be made for the support of institutions for the blind, for the deaf and dumb, and for juvenile offenders, as well as for an agricultural college and the State university. And all the public schools, colleges, and universities of the State, supported in whole or in part by public funds, were to be free and open to all the children of the State without regard to race or color.*

In accordance with these provisions, a school law was passed February 16, 1870, and somewhat modified March 6, 1871. This provided for the school officers directed in the constitution, and added to them a county board of examiners for each county, to be composed of the county school commissioner and of two other persons appointed by him. This board was to examine and license teachers for the county, and without a certificate from it or from the State superintendent no one was to be employed as a teacher in the public schools. It was also to appoint 3 trustees for every school district, to hold office for two years, assume the management of local educational interests, employ teachers, open schools, levy the needful district taxes for them, and make once in two years a census of the school population.

Under these laws, which have been since but little changed, the State school system was put in thorough operation, preliminary steps having been taken in 1869. In the first report of it, presented November 15, 1870, there were said to have been 630 public schools, with 734 teachers, 23,441 pupils, and $57,320 income from the State for the year ended October 31, 1869; while for 1870 there were, up to June 24th, 769 public schools, with 30,448 scholars, four counties not reporting. They have gone on increasing since to such an extent that the latest report gives 2,776 schools, with 123,085 children in them under 3,068 teachers, and an income of $457,260 from State tax, local taxes, the Peabody fund, and other sources.

The several State institutions provided for have also been put in more or less successful operation, with the exception of the reform school, and there appears to be a prospect of a fair school future for the State.

STATE SUPERVISION.

From 1868 till 1876 the Hon. J. K. Jillson has been State superintendent of education under the new system, and has shown himself a faithful and efficient officer. His first successor was Hon. John R. Tolbert, who claimed to have been elected in November, 1876. In the early part of 1877 he was succeeded by Hon. S. R. Thompson, to whom the position was adjudged.

ELEMENTARY INSTRUCTION.

STUDIES PURSUED.

From the political agitations in the State at the time of the preparation of Mr. Jillson's last report, we are left ignorant of some things we should have liked to be informed about. We have, however, the following clear intelligence as to the studies in the public schools and the numbers engaged in each: Alphabet, 15,185; spelling, 94,157; reading, 71,368; writing, 47,438; mental arithmetic, 35,445; written arithmetic, 33,037; geography, 30,482; English grammar, 17,433; history of the United States, 13,587; higher branches, 3,138.—(State report for 1875–'76, p. 10.)

SCHOOL-HOUSES.

Of the 2,465 school-houses reported, 819 are said to have been owned by school districts and 1,646 by other parties. During the year 1875–'76 there were 118 new ones erected, all which may be presumed to be in good condition. Including these, there were 1,445 reported good, 565 fair, 455 bad. Only 346 had grounds inclosed; 1,400 were of logs; 1,045 were frame; 19 of brick, and 1 of stone.—(State report for 1875–'76, p. 11.)

AID FROM PEABODY FUND.

From this most benevolent and admirably managed agency for encouraging and helping education at the South, $3,850 are said to have been received, the aid being distributed among 6 schools — 1 at Aiken, 1 at Greenville, 2 at Columbia, 1 at Sumter, and 1 at Yorkville. The amounts distributed indicate, according to the rules governing such distributions, schools regularly graded with from 100 to 450 pupils each, and these averaging 85 per cent.—(State report, p. 58.)

*Separate schools for white and colored children, though not apparently made obligatory by law, have yet been the rule, under the influence of a very general public sentiment, since the institution of the new system thus provided for.

DEFICIENT PAYMENTS TO SCHOOL OFFICERS.

As in 1875, the report of the State treasurer for the year ended October 31, 1876, showed a balance due on account of salaries of county school commissioners, this time amounting to $17,313.69 against $20,332.96 the preceding year.

Out of an appropriation of $90,000 for payment of similar deficiencies due prior to November 1, 1873, there is still an unpaid balance of $8,226.75, although $5,234.12 in excess of the appropriation were received from a special tax for it.—(State report for 1875–'76, pp. 57, 58.)

KINDERGÄRTEN.

A Kindergarten at Williamston, a department of the Williamston Female College, reports an attendance of 20 children taught by a principal and one assistant. The children are admitted between 5 and 10 years of age, and are kept in school 2 hours each day.

There was also a school of this kind maintained in 1876 in connection with the Holy Communion Church Institute in Charleston.—(Returns for 1876.)

CITY SCHOOL SYSTEM.

CHARLESTON.

Organization.— A board of school commissioners, one from each ward, with a city superintendent of schools appointed by it.

Statistics.— Population of the city in 1870, 48,956; children of school age in the year past, 12,727, of these 5,873 being white, and 6,854 colored; number of public schools, 5; attendance in these, 6,142, almost an equal number of white and colored. Teachers, all southerners except one, 89, of whom 10 were colored and 5 were males; third grade 12, second grade 53, first grade 24; average monthly pay of teachers, males, $121.66; females, $39.23; total amount of salaries paid them during the year, $46,291.55. Average number of months schools were in session, 10; receipts for school purposes in the year, $60,184.99; expenditures, $59,348.57.

Notes.—The school-houses, all owned by the city, and all having inclosed grounds, are 5 brick structures and 1 frame with brick basement. The valuation of them is $125,000. Of the 6,142 students in them, 617 were in the alphabet; from 3,760 to 5,525 in other primary branches; from 2,526 to 5,525 in those of grammar grades, and 353 in higher studies. The sources from which the city school funds were derived were a State appropriation and poll tax, amounting together to $11,621.70; a city tax of 1½ mills, yielding $42,000; an unexpended balance from last year of $1,954.15, and $4,609.14 from other unmentioned sources.—(Report of Rev. Joseph B. Seabrook, city superintendent, in State report for 1875–'76, pp. 15–17.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

The State normal school, at Columbia, organized in 1874, reports 2 resident instructors, 4 non-resident, and a course of study covering 4 years. Graduates who receive certificates here are authorized by law to teach in the common schools of the State without further examination. Tuition is free. Number of students not given.—(Return, 1876.)

NORMAL INSTITUTE.

The Avery Normal Institute, at Charleston, organized in 1865, reports for 1876 an attendance of 116 students in its normal department; graduates, 17. The course of study covers 3 years. Drawing and vocal music are taught.—(Special return, 1876.)

TEACHER'S INSTITUTES.

Four of these means for improving teachers, held in as many different counties, are reported by the superintendent for the year. At one held in Spartanburg County, 42 teachers were present. Of the attendance at the others no return was made.—(Report of State superintendent for 1875–'76, p. 20.)

SCHOOL JOURNAL.

The Carolina Teacher, a useful monthly, devoted to the educational interests of the State, was started in March, 1876, with the approbation of the State superintendent and the governor, and ran through nine numbers under the editorship of M. A. Warren, of Columbia; it then failed for want of due support.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent, in his annual report for 1875–'76, gives no information in respect to public high schools except the statement that 3,138 pupils in the public

schools were pursuing higher branches of knowledge. It appears from the Charleston report, included in the other, that of this number 353 were in the high school of that city. Whether any of the county high schools recommended in 1875 to be established have been put in operation is not stated.—(State report for 1875–'76, pp. 10–16.)

PRIVATE SECONDARY SCHOOLS.

In 4 schools for girls, and 6 for both sexes, outside of the public school system, there have been reported to this Bureau 1,102 pupils under 38 teachers. Of these, 137 are in classical studies, 15 in modern languages, and 97 preparing for a classical course in college. Drawing is taught in 2 of these schools, vocal music in 6, and instrumental music in 6. Chemical laboratories are reported by 2, philosophical apparatus by 1, and libraries of 50 to 1,000 volumes by 5, the aggregate number of volumes being 2,114.—(Returns for 1876.)

PREPARATORY SCHOOL AND DEPARTMENTS.

Four preparatory departments and 1 preparatory school report a total of 8 teachers and 211 students, of whom 100 were preparing for a classical and 86 for a scientific course.—(Returns for 1876.)

HOLY COMMUNION CHURCH INSTITUTE.

This school was opened in Charleston, in 1868, by the efforts of Rev. A. T. Porter, for the purpose of affording a good education, combined with careful moral and religious training, to white male children who by the war have been deprived of the means of obtaining such education, either through the loss or the impoverishment of parents. It has been sustained largely by the liberality of Christian friends in the Northern States. Though under the influence of the Protestant Episcopal Church, the school is open to all denominations. There is a full classical course, an English course, and a primary class.—(Catalogue, 1874–'75 and 1875–'76.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF SOUTH CAROLINA.

The university includes a law school, college classes, a preparatory school, and special classes. There are 124 beneficiary scholarships, established by the State in 1873–'74, which yield an income of $200 a year each. They are apportioned to the counties according to the number of representatives each county is entitled to in the general assembly, and are open for general competitive examination. When once assigned, the scholarships hold good for 4 years, or until graduation, unless forfeited through misconduct, an inferior grade of scholarship, or habitual neglect of duty. This law was framed to encourage higher education throughout the State by giving judicious help to worthy and ambitious scholars.—(Catalogue of university, 1875–'76.)

OTHER COLLEGES.

College of Charleston (non-sectarian) includes in its regular collegiate course the Greek, Latin, French, and German languages. Students not wishing to pursue the regular course are received for such special subjects as they may select, provided that not less than 3 be taken in any academic term.—(Circular.)

Erskine College, Due West, (Associate Reformed Presbyterian,) includes preparatory and collegiate departments, the former covering 2, the latter 4 years.—(Catalogue, 1874–'75.)

Furman University, Greenville, (Baptist,) comprises in its curriculum 9 separate schools, viz, (1) Roman language and literature; (2) Greek language and literature; (3) mathematics and mechanical philosophy; (4) natural philosophy; (5) chemistry and natural history; (6) logic, rhetoric, and the evidences of Christianity; (7) metaphysics; (8) English language and literature; and (9) modern languages. Tuition is free.—(Catalogue, 1875–'76.)

Newberry College, Walhalla, (Lutheran,) includes collegiate and preparatory departments. Latin, Greek, and German form part of the college course. The degree of A. M. is conferred in course on bachelors of 3 years' standing who have sustained themselves honorably in scholastic pursuits.—(Catalogue, 1875–'76.)

Wofford College, Spartanburg, (M. E. South,) includes collegiate and preparatory departments. The degree of A. M. is conferred on any A. B. who has been engaged in literary occupations since graduating.—(Circular, 1876.)

COLLEGES FOR WOMEN.

Three institutions for the superior instruction of women report a total of 27 instructors and 364 students, of whom 103 were in preparatory departments, 180 in regular studies, 2 in partial and 2 in graduate courses covering a period of 4 to 8 years. Vocal and instrumental music, French, and drawing are taught in all; 2 teach painting and 1 German. The libraries of these institutions number 750 volumes.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Agricultural College and Mechanics' Institute, commonly known as Claflin University, Orangeburg, furnishes common English, agricultural and scientific, and classical courses. The agricultural and scientific course embraces, in addition to the higher English branches, mechanical drawing, plane trigonometry, chemistry, physiology, elocution, and declamation, mensuration, surveying, meteorology, chemistry of soils, zoölogy, and rural architecture.—(Report of the college, 1876–'77.)

THEOLOGY.

The Theological Seminary of the Synod of South Carolina and Georgia, at Columbia under the care of the general assembly of the Presbyterian Church, provides a course of study extending over 3 years, which covers the several departments of theological education. A fourth year's course is arranged for those who wish to extend their studies beyond the regular course.—(Catalogue of seminary, 1875–'76.)

The Southern Baptist Theological Seminary, at Greenville, has an elective course of study, to complete which requires always 3 and sometimes 4 or 5 years. There are 8 distinct and independent schools, the studies in each of which are completed in 1 year, with the exception of the Hebrew and Greek.—(Catalogue of seminary, 1875–'76.)

LAW.

The law department of the University of South Carolina has a 2-years' course of study of 9 months each. Tuition is free. Of the 12 students attending in 1876, 4 had received degrees in letters or science.—(Return, 1876.)

MEDICINE.

The Medical College of the State of South Carolina requires for graduation attendance upon 2 courses of lectures in addition to 1 year's previous study. The clinical advantages of the school are greater than ever before.—(Announcement, 1875–'76, and special return, 1876.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The South Carolina Institution for the Education of the Deaf and Dumb and the Blind, at Spartanburg Court-House, temporarily suspended for lack of funds, resumed its exercises September 6, 1876, and reports an attendance of 25 pupils taught by 4 instructors. The average number of years spent by pupils in the institution is 6.

The State appropriation for the support of the institution for the fiscal year ended October 31, 1876, was $5,000, of which only $3,000 were received. An appropriation of $15,000 for it is recommended.—(State report, p. 21, and return for 1876.)

EDUCATIONAL CONVENTION.

STATE BOARD OF EDUCATION.

The annual meeting of this board was to have begun, according to law, Wednesday, October 4, 1876, but a quorum of members not appearing no meeting of the board was held. The State superintendent evidently attributes the non-appearance of members to the fact that no appropriation for travelling expenses of these gentlemen had been made by the preceding general assembly.—(State report, p. 21.)

CHIEF SCHOOL OFFICIAL.

Hon. S. R. THOMPSON, *State superintendent of education, Columbia.*

[Under the decision of the General Government to recognize the Hampton State government as the one legally elected in 1876, Hon. S. R. Thompson occupies the position of State superintendent of education, instead of Hon. John R. Tolbert, who claimed that he had been elected. No list of other schoo officers has been received.]

TENNESSEE.

SUMMARY OF STATISTICS.

	1874–'75.	1875–'76.	Increase.	Decrease.
POPULATION AND ATTENDANCE.				
Children of school age, (6–18)	426,612	434,131	7,519	
Enrolled in public schools	199,058	194,180		4,878
Average daily attendance	136,805	125,908		10,897

†The superintendent's total, doubtless including some things not specified in the return, is $698,220.

(Report of Hon. Leon. Trousdale, State superintendent of public schools, for 1875–'76, and returns for 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

U. S. Statutes at Large, vol. 1, pp. 491–92, 617; vol. 2, pp. 382–83; Laws of Tennessee, Haywood & Cobb's Digest, vol. 1, pp. 3, 4, 295–300; Acts of Tennessee, 1866–'67, 1869–'70; School Laws of 1873 and 1875, and school reports from 1869.

FOUNDATION OF A SCHOOL FUND.

Settled from North Carolina in 1756, and closely linked with it for many of its earlier years, Tennessee had for some time a controversy with the parent State as to the title to large lands which lay between them. Unwilling to yield these to the young State in the West, North Carolina ceded finally to the United States the whole territory on her western border to the Mississippi, and out of this was formed in 1794 the Territory and in 1796 the State of Tennessee. To settle the question as to the region in debate, Congress passed, April 18, 1806, an act to authorize the new State to issue grants and perfect land titles in that region. This act required her to appropriate 100,000 acres of the land, in one tract, for the use of two colleges, to be established by the legislature, one in East and the other in West Tennessee.* Another 100,000 acres, in one tract, was required to be appropriated to the use of academies, one in each county, to be also established by the legislature.† And further, Tennessee was to locate 640 acres to every six miles square of the territory given to her by the act, where existing claims would allow the same, for the use of schools for the instruction of children forever.

These reservations were the original foundation of a college fund, an academy fund, and a common school fund for the State, all evidently looking to a correlated system of primary, secondary, and superior education for the people.‡ It is with the school fund only we have now to deal. The lands to form the basis of it were by successive acts allowed to be disposed of for miserably small sums, such as 1 cent and 12½ cents an acre in some cases, and the proceeds of the sale or lease of them invested for the benefit of schools by commissioners appointed for the purpose. In 1823 it was enacted that these proceeds should "remain and constitute a perpetual fund for the establishment and promotion of common schools in each and every county of the State." In 1827, December 12, there were added to these proceeds a large share of the capital and interest of "the new State bank," the proceeds of all the lands in the region previously referred to, as well as of all the vacant and unappropriated lands within the limits of the State, donations and bequests made to the State and not otherwise appropriated, 400 shares in the old bank of the State at Knoxville, and all property falling to the State by escheat. The school moneys already in the new State bank, and all accruing from the new sources here provided, were to go into the capital of the new State bank, and be invested in it for the use, support, and encouragement of common schools forever.

This fund, with its accretions, past and to come, the amended State constitution of 1835 said should remain a perpetual fund, the principal of which should never be diminished by legislative appropriation, and the interest whereof should be inviolably appropriated to the support and encouragement of common schools throughout the State for the equal benefit of all the people.

STEPS TOWARD A SCHOOL SYSTEM.

The funds accrued from the school lands and other sources were by 1830 believed to be sufficient for the initiation of a school system for the State, and on January 14 in that year an act for the institution of such a system passed the final tests and became a law.§

This act provided for the choice by the county courts, at their first or second term after January 1, 1830, of "one commissioner in each captain's company in each county," and made it the duty of these commissioners "to meet at their respective regimental muster grounds for the purpose of dividing said regiment into school districts." They were also to make a list of the householders and heads of families within each district,

*An act to establish the college for West Tennessee, and give it the lands of Davidson Academy, Nashville, on which it was placed by request of the trustees, was passed September 11, 1806. One to establish that for East Tennessee was passed October 26, 1807. It was subsequently authorized to absorb Blount College, Knoxville, and take its place.—(Scott's edition of the Laws of Tennessee, pp. 929–31, 1047, 1059–62.)

†An act to establish academies in the several counties of the State, and appoint trustees for them, was passed September 13, 1806.—(Scott's Laws of Tennessee, pp. 931–36.)

‡This idea was in some measure recognized in an act of October 20, 1817, which set forth that "Whereas institutions of learning, both academies and colleges, should ever be under the fostering care of the legislature, and in their connection form a complete system of education, be it enacted that all the academies of this State shall be considered schools preparatory to the introduction of students into the colleges," &c.

§Haywood & Cobb's Digest says 1829, but the foregoing is the date given in the annual volume of the laws.

and commit this to a justice of the peace in or near the district, who, after ten days' notice, should open and hold an election for 5 trustees to hold office for 12 months or till their successors should be elected. These trustees of districts, after being elected and sworn, were to organize themselves into a board, and choose from among themselves a chairman, clerk, and treasurer; and then the chairmen of the several districts in each county were to meet at the court house on the first Saturday in June, in each and every year, for the purpose of choosing not less than 5 nor more than 7 discreet and intelligent citizens for common school commissioners for said county. These county school commissioners were to have charge of all the school moneys for their respective counties, their chairman being the one in whose name notes, bonds, &c., were receivable, and their clerk, who should also act as treasurer, being responsible under bond for the safe keeping and due payment of all funds committed to him. The interest coming to the county from the school fund, the tax to be added to this on the school lands sold, and any other tax or fine directed by law to be paid to the commissioners, were together to constitute a fund for annual distribution among the school districts for school purposes. And when the trustees of a district should satisfy the commissioners that they had provided a comfortable school-house, and should give bond for the faithful application of all school funds received by them to the support of a free school in their district, the commissioners were to apportion to the district a share of the annual school fund according to the number of children in it between the ages of 5 and 15 years.* The funds thus received were to be supplemented by donations which each trustee was to solicit from his neighbors for fuller support and continuance of the school. These additional sums were to be kept account of by a district clerk, and to be annually and specifically reported to the commissioners, as well as those received from the commissioners.

To the schools thus provided for the district trustees were to have the full and sole power of appointing teachers, and of judging of their qualifications, capacity, and character; and in case of neglect of duty, proven incapacity, or tyranny, they had also power to dismiss such teachers, two-thirds of their number agreeing thereto. They were also to endeavor to induce all children in the district under the age of 15 to be sent to school, and no distinction should be made between rich and poor, but said school should be open and free to all. Full power was given the trustees to guard the morals and manners of the children, and it was made their duty to suspend or expel any scholar when, in their opinion, the good of the school required it. If they could not keep the school open the whole year, they were to arrange to have it open at the season when the children would be most at leisure and when it would be most convenient for them to attend. They were to report annually to the common school commissioners the condition of the school, the wages paid the teacher, the number of months it was kept up, the number of children instructed, the branches of instruction taught, and "the average price given for tuition each month per scholar."

For the proper supervision of the schools, beyond that committed to the district trustees, the county school commissioners were to "number the school district in each county, and divide said district into five equal parts, or as nearly so as practicable, and assign to each one of their own body one of said divisions." The one to whom a division was assigned was to visit each school in it at least once a year, and examine into the situation and condition of said schools, the progress the scholars were making, and the branches taught. And annually before the first day of September in each year they were to report to the secretary of state the receipts and disbursements of school moneys by them, the number of schools kept up and of scholars in each, the whole number in the county, the length of time each was kept up, the amount paid each teacher, the branches taught and the number of scholars in each branch, the average price of tuition throughout the county, what districts had failed, and what one had especially excelled all others. In the last case, they were to report the names of the trustees and the points in which especial excellence had been attained.

In reviewing these provisions of the law of 1830, one cannot but be struck with their fulness and completeness for the region and the time, and cannot but feel that if good free schools were not secured, it was not for want of fair arrangements for them by the law makers. How far the arrangements made proved actually efficient, there are no means at hand at present for determining, except the census returns of the United States. These showed in 1840, in addition to 8 colleges and 152 academies and grammar schools, 983 primary schools, with 25,090 scholars, of whom 6,907 were at public charge. In 1850, the public schools reported were 2,667, with 2,804 teachers and 103,651 pupils; the income being $8,912 from endowments, $4,500 from taxes, $97,738 from public funds, and $84,293 from other sources. In 1860, no great difference appears except in income, the schools being 2,965, the teachers 3,064, and the pupils 138,809; while the income had risen to $5,343 from endowments, $22,297 from taxation, $196,351 from public funds, and $178,913 from other sources.

Into the law of 1830 considerable modifications were subsequently introduced, such

*The law does not say "white children," though it is to be presumed that these alone were meant in a southern and slaveholding State.

as the establishment of a State board of commissioners for the care of the school fund, the substitution of the State treasurer for the State secretary as the acting head of the school system, the appointment by the county courts of a county officer for examining teachers, and the giving to the district clerk the power of employing teachers; but the distinctions of State, county, and district school officers substantially remained until the war.

REORGANIZATION OF THE SYSTEM.

When the war for secession, waged by the Southern States, was brought to a conclusion in 1865 the whole slave system of the South at once collapsed. The former slaves were quickly declared citizens, and the question of the education of their children and of the connection this should have with that of whites, had to be taken up and settled. While this was in agitation, the opportunity for reorganizing the framework of the school system and introducing more efficient supervision and more sure support seemed too good to be lost. Accordingly, on March 5, 1867, a law was passed which included in its purview schools for colored children; made each civil district a school district and each several school district of the old system a subdistrict; officered these with 3 directors for subdistricts and a board of education for a civil district composed of the clerks of the subdistricts; and set over all for counties a county superintendent and for the State a State superintendent of common schools, the latter to be elected by the people every two years, the former by a triennial convention of the boards of education of the civil districts in each county on the first Monday in March, 1868, and on the same day in each third year thereafter. For due care of the school fund the State board of commissioners was continued, with the addition to it of the State superintendent of common schools, and for the increase of its annual proceeds to an amount sufficient for free education of all the youth of the State there was directed to be a yearly levy of 2 mills on the dollar of all taxable property, an addition of 25 cents annually to the tax on each poll, and, after June 30, 1867, a quarter of a cent a mile for every paying passenger transported on the railroads of the State.

The directors of subdistricts were to have the care of the local common schools, and the civil district boards of education the control and management of high schools in their districts. The county superintendent was to examine and license teachers, act as treasurer of the school moneys of his county, visit the schools frequently, forward yearly to the State superintendent an enumeration of the children of school age in each district of his county, and make annual report also of the condition of the schools, as observed by him in his visits to them and reported to him by school boards. The State superintendent was to give his time to the care and improvement of the whole school system; was to spend at least ten days of his term in each judicial district of the State, encouraging county superintendents and teachers, conferring with district boards, and otherwise promoting the interests of education. The schools were to be regularly taught 5 months in every year, and for prolongation of the session beyond that time directors were authorized, on a vote of their district in favor of it, to have a tax levied and collected for such a prolongation. For colored children, special schools were to be opened when the whole number in a district or subdistrict should exceed twenty-five.

RETROGRESSION.

The system above sketched, a well rounded and complete one for the time, was a great advance on any preceding one, and under it, up to 1869, there were 3,903 schools opened, 848 of them for two terms; in these 4,614 different teachers were employed, and 185,845 scholars enrolled. But the very features which to a people familiar with advanced school systems would have recommended themselves as improvements, to those unused to such systems seemed intolerable innovations, while in their then impoverished condition the additional tax for schools appeared oppressive. So the legislature of 1869-'70, under the influence of clamors for economy and county rights, swept away the main elements of improvement, and went back to some of the worst parts of the old system. Instead of a State superintendent entirely devoted to the schools and infusing life into them by frequent visits, the treasurer of the State was again made superintendent; and instead of schools to be established everywhere for all, it was left to the courts and people of each county to determine whether they should tax themselves for schools or not. The result of this, notwithstanding the engagement of an assistant State superintendent through aid from the Peabody fund, was such a rapid running down of the school machinery that, in March, 1873, there came a law with

A RETURN TO SEPARATE STATE SUPERINTENDENCY, ETC.

Under this new law, passed March 5, 1873, and approved March 15, the State superintendent, instead of being elected by the people, as under that of 1867, was to be nominated by the governor and confirmed by the senate; and, though the office had been abolished as a separate one "for the purpose of economy," the salary, on its restoration, was made larger than it had been. The county superintendents, too, under a growing sense of the value of their services, were very generally allowed higher

salaries. The tax for school purposes was made 1 mill on the dollar, instead of the 2 mills of 1867; but to compensate for this in some degree the interest on the State school fund, which had been for several years accumulating and had not been paid over by the State, was reconsecrated to its proper use and added to the principal, making the whole fund $2,512,500. For this a State certificate of indebtedness was directed to be issued, which should bear interest at 6 per cent., and this interest was to be semi-annually paid over. For purchasing school sites, for building school-houses, for prolonging schools, and for payment of necessary school expenses, the inhabitants of districts were authorized to levy, through their school directors, a tax not to exceed 3 mills on the dollar.

In 1875 this last power was taken away, but in most other respects the substance of the former law was left to operate, and still continues.

Normal instruction is provided for in a State normal college, established in 1875, at Nashville; agricultural and scientific instruction in the Tennessee Agricultural College, organized in 1869, at Knoxville, as a department of the East Tennessee University; special instruction in the Tennessee School for the Blind, at Nashville, organized in 1844, and in the Tennessee School for the Deaf and Dumb, at the same place, organized in 1845.

STATE SUPERINTENDENTS.

No list of the gentlemen who as secretaries of state or treasurers performed the office duties of State superintendents of schools is now at hand. The first one solely devoted to the supervision of schools was Gen. John Eaton, 1867–'69. His successor, 1869–'70, was Hon. Mr. Tipton. Hon. William Morrow, State treasurer, served as superintendent, with J. B. Killibrew as his visiting assistant, 1870–'73; he was succeeded by Hon. John M. Fleming, again wholly devoted to the schools, 1873–'75, and he by the present incumbent, Hon. Leon. Trousdale, 1875–'77.

ELEMENTARY INSTRUCTION.

CONDITION OF THE PUBLIC SCHOOLS.

There is encouragement as to the success of the public school system throughout most of the counties of the State, especially in those which have levied a sufficient supplemental tax to continue their schools from 5 to 7 months, and have provided wise and intelligent supervision of them. In a very large number of public schools, however, as appears from county superintendents' reports, the terms were too short to be of much real service, ranging as they did from 2 to 5 months. In a few counties, reports show that no organization of the system has taken effect, so as to develop a solid public sentiment in its favor, that no tax has been levied, and no effort made to encourage the county superintendent to labor zealously and efficiently. But in a greatly larger number of counties the work has gone on vigorously, and a system of education has been organized which promises a progressive development equal to the best wishes of its friends and of the people at large. Success is no longer a problem, but a fixed fact.

There is a slight deficiency in the enrolment and average attendance of pupils as compared with 1875, arising mainly from the instructions given to school officers by a circular issued from the superintendent's office June 1, 1875, which resulted in a suspension of schools in some districts where the directors had made an overestimate of the accruing school revenue, and had thereby incurred a considerable indebtedness to teachers. It was judged better to suspend the schools in such districts until the indebtedness could be cancelled.

The enrolment in the 66 counties reporting private schools would indicate that there are about 45,000 pupils in private schools in the 94 counties, which, added to the numbers in public schools, makes a total of 239,180 in public and private schools, or about 55 per cent. of the school population.—(Report of State superintendent, 1875–'76, pp. 5–9, 13.)

AID FROM THE PEABODY FUND.

From this excellent aid to southern education $6,000 were allowed in 1876 for the State Normal College at Nashville, $1,500 for an agency in Tennessee, $600 for teachers' institutes, $4,100 to cities and towns, and $200 each to 12 different institutions; total for the State, $14,600.—(Report of the trustees and agent for 1876.)

PUBLIC AND PRIVATE SCHOOLS.

The State superintendent has, within the past two years, endeavored earnestly to collect all the available statistics respecting private schools in order to compare them with the public schools in the matters of enrolment, attendance, and cost. In 1875 he issued instructions to county superintendents to furnish the facts from their counties, and received complete or partial returns from 26. These showed that the average monthly cost of tuition was $2.84 for each pupil. The returns for 1876 are fuller, embracing 66 counties, and have been gathered with more care. They show that the

average monthly rate of tuition in 1,083 private schools, having an enrolment of 31,416 pupils, is $1.79 for each pupil, or a fraction over 93 cents a month for each in excess of the rate in the public schools. These figures, moreover, represent only the cost of tuition in private schools, while they represent the entire cost of the free schools, except for improvements, school-houses, sites, &c. There is thus, it will be seen, a saving to the public of $180,587.40 each month on the cost for tuition of children attending public schools, a sum which would be increased by $29,216.88 if the children attending private were transferred to public schools, in which case the whole sum thus saved would be $209,804.28. In addition to this showing, it appears that the competition of public schools has reduced in one year the cost of tuition in private schools from $2.84 a month to $1.79.—(Report of State superintendent, 1875–'76, pp. 10–12.)

CITY SCHOOL SYSTEMS.

CHATTANOOGA.

Officers.—A board of education of 10 members, with a president, vice-president, treasurer, and secretary, who is also city superintendent of schools.

Statistics.—Population of city, (in 1870,) 6,093; youth, 6–18 years of age, 2,317; enrolment in public schools, 1,630; estimated enrolment in private and parochial schools, 250; per cent. of average daily attendance on average number belonging, 92.47. The number of regular teachers employed is 25, of whom 7 are men, (two of them in the high school,) and 18 women. The monthly salaries of teachers range from $40 paid to assistants in primary, to $120 paid to principals in high schools. Receipts for school purposes, $16,960.57; expenditures, $17,620.25. Average expenses per capita, $17.53. Estimated value of school property, $16,363.79.

Remarks.—The year 1875–'76 was a prosperous one for the schools, except financially. They felt the stringency of the times, and many needed improvements were deferred. The monthly enrolment increased 83 over any previous year and the average belonging 105, a long step in the right direction. There are yet many errors to correct and abuses to reform in regard to absence and irregularities, but during the four years of the existence of the system improvement has been marked.—(Report of State superintendent, 1875–'76, p. 98, and special return to the United States Bureau of Education, 1875–'76.)

KNOXVILLE.

Officers.— A board of education of 5 members, elected for terms of 5 years, 1 member going out of office each year, and a city superintendent of schools.

Statistics.—Estimated population, 13,000; youth from 6 to 18 years of age, 2,000; total enrolment in schools, 1,500; average number belonging, 959; average number in daily attendance, 849. Number of school rooms, 22; number of sittings, 959. Cost of tuition per capita of pupils attending, $15.20. Number of teachers, including 3 in evening schools, 24; salaries, $40 to $65 a month. Total annual expenditures for public schools, $13,124.92; receipts, $13,222.51.

Remarks.— The progress of the scholars in scholarship, discipline, and attendance is very gratifying. There has been a decided improvement in public sentiment toward the schools. The increase of 660 in enrolment during the year came from those who had attended private schools or had been absent altogether. The schools are graded as primary, intermediate, grammar, and high. The last claims to offer as thorough a preparation for college or for business as can be obtained in the best private or select schools.—(Report of Superintendent H. T. Morton for 1875–'76; statistics from return to Bureau of Education, 1875–'76.)

MEMPHIS.

Officers.— A board of education of 20 members, 2 from each ward, who hold office 2 years, one-half going out each year. The officers of the board are president, vice-president, secretary, treasurer, and city superintendent of schools.

Statistics.— Population at the last census, 40,226; children of school age: white, 6,598; colored, 3,821; total, 10,419. Number enrolled: whites, about 4,200; colored, about 1,300; total, about 5,500. Average daily attendance: white children, 1,810; colored, 582; total, 2,392. Average number belonging, 2,660. Total expenditures for school purposes, including interest on previous indebtedness, $49,481.92. Cost per capita, based on average daily attendance, $20.69.

Remarks.— The schools were unusually successful during the year 1875–'76, excelling in point of efficiency any former year. To meet the requirements of legislation some changes had to be made at the beginning of the year, most notable of which was the introduction of the half-day system in the lower grades, and the reduction of the number of principals. The result of the year's work has proven the efficiency of the half-day system; which, while securing an equal progress on the part of the children, saved to the city not less than $10,000 during the year. The labor, however, was too great for the principals retained, and a slight increase in their number is recommended.—(Memphis city report, 1875–'76, A. Pickett, superintendent.)

NASHVILLE.

Officers.— A board of education of 9 members, one-third of the number going out of office each year, and a city superintendent of schools.

Statistics.— Population, 27,500; youth from 6 to 18 years of age, 9,114; pupils enrolled, 4,159; average attendance, 2,943. Approximate number in private schools, 500. Teachers in the public schools, 74. Average salary paid teachers, $675.44. Cost of tuition per capita of pupils belonging, $17.20; on average daily attendance, $22.63. Total school expenditures for the year, $81,291.34. Value of school property, $169,000.

Remarks.— Under the revised rules of the board permitting corporal punishment to be used in the schools only as a last resort, most satisfactory results were attained in diminishing the number of cases requiring such discipline; the per cent. of these on attendance being 0.47 against 0.78 of the previous year. There has also been proportionally as great a decrease in suspensions as in punishments, the per cent. being 0.03 as against 0.14. An equally encouraging indication is the increase in the number of visitors to the schools, there being in all 7,868, or 1,646 more than for the previous session. The average per cent. of scholarship was 69, which is an advance of 1 per cent., and is based on the results of written examinations alone. The schools are divided into 11 grades, which occupy as many years; the studies of the last three appearing to indicate the existence of a high school department.—(Report of S. Y. Caldwell, superintendent of Nashville public schools, for 1875–'76, and return to United States Bureau of Education, 1875–'76.)

TRAINING OF TEACHERS.

STATE NORMAL COLLEGE.

The State Normal College of the University of Nashville owes its existence to the efforts of prominent educators in Tennessee and the neighboring States and to the demand of the people for better qualified teachers. This demand was expressed by an act passed by the State legislature in 1875, the preamble of which set forth that "an adequate supply of professionally educated teachers is a necessity to the maintenance of an efficient system of public schools." The act then proceeded to make such provisions as culminated in this institution. The State, however, not having provided the funds necessary for a full development of its purposes, the University of Nashville offered to suspend its literary department and devote to the normal school its buildings, grounds, and funds, with the exception of those appropriated to the medical college. This proposition was supplemented by an offer from the trustees of the Peabody Education fund of $6,000 a year for 2 years. These offers having been accepted by the State board of education, and grounds, buildings, and funds to the amount of $12,000 having been thus furnished, the institution was opened December 1, 1875; before the close of the school year, 60 students were in attendance. Its course requires 3 years of study.

The State superintendent bears testimony to the ability with which the institution has been conducted, and renews his recommendation in favor of a liberal fostering care toward it.—(Report of State superintendent, 1875–'76, pp. 19, 80, 81.)

OTHER NORMAL SCHOOLS.

Central Normal School, Humboldt, was organized October 3, 1876, with 5 pupils, and by December the number was 44. There is a course of one year for those who wish to prepare for common school work, and a course of 5 years for those who wish to prepare for high school and academic work.—(Return, 1875–'76.)

Central Tennessee College, Nashville, has a 4 years' course of study, and reports an attendance of 51 normal students.—(Return, 1876.)

Freedman's Normal Institute, Maryville, under the management of Friends, embraces a preparatory, a teachers' elementary, a teachers' advanced, and a classical course. The requirements in order to enter the teachers' elementary course are ability to read understandingly, write legibly, and solve problems in long division readily. This course occupies 2 years, and is preparatory to either of the other two. In order to enter the teachers' advanced course or the classical course, students must pass a satisfactory examination in all the branches prescribed by the school law of the State as necessary to the qualification of teachers. Number of students in 1875–'76, 26.—(Circular of institute and special return.)

Le Moyne Normal School, at Memphis, was established in 1871, through the American Missionary Association, by funds given for the purpose by Dr. F. Julius Le Moyne, for the training of colored people as teachers. The departments of the school are normal, intermediate, and primary. The normal department provides thorough instruction, especially in those branches taught in the public schools of Tennessee, with the approved methods of teaching and school and class management. Number of normal students, 80.—(Catalogue, 1875–'76, and return.)

Maryville College, Maryville, has also a special normal course, the studies in which and the length of which are not given.—(Catalogue, 1875–'76.)

New Providence Institute, Maryville, established in 1852, is principally preparatory, is

controlled by the Masonic fraternity, and reports 12 students engaged in normal studies.—(Return, 1876.)

Normal Department of Fisk University, Nashville, has a full course of 7 years, and reports 110 pupils.—(Return, 1876.)

South Normal School and Business Institute, Jonesboro', was established in June, 1876, and had at the close of the year an attendance of 55 students. The course covers 4 years.—(Return, 1876.)

Besides the above, there is information in the State report of a normal department having been organized in connection with the high school at Shelbyville, Bedford County, and of a summer normal school in Washington County, in which 50 teachers were enrolled June 26, 1876.

FURTHER NORMAL WORK.

The Society of Friends is performing an interesting work in this State through Dr. Garner, in Blount County, and his assistant, Mr. Parker, at Hopewell Springs, Monroe County, in drawing in the ignorant whites, teaching them, and preparing the most intelligent of them to be teachers in the mountain regions of Tennessee and North Carolina. Six teachers were prepared under Mr. Parker in 1875 and 1876, and as many more expected to be in 1876–'77.

The effort is not only to instruct in letters, but to aid the people in improving their manner of living.—(Letter to Commissioner of Education, 1876.)

INSTITUTES.

The State superintendent held general institutes for teachers at various points in the State during the last year, without special legal authority, and without expense to the State. These have, in every case, had a healthful and encouraging influence on public sentiment, and have aroused the enthusiasm and quickened the intelligence of the large numbers that attended them. The superintendent has thus been encouraged to devise a more systematic plan for extending their advantages into every portion of the State. He has issued circulars addressed to county superintendents providing for holding one or more general institutes in each congressional district. He asks the legislature to sanction the plan, with the view of giving higher authority to it and enlisting more full coöperation from school officers and teachers.—(State report, 1875–'76, p. 18)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

There is no statement in Mr. Trousdale's report of the number of public high schools, or of the course of study in them. In Table III of the report there appear 152 grade schools, but without intimation as to how many of them extend to high school grades. High schools certainly exist, not only in the chief cities of the State, but in several smaller places also. The State forms of inquiry respecting schools do not, however, include these, and even those of the Bureau of Education, which do include them, often fail to elicit full information respecting them. A return from Chattanooga for 1876 shows at least 2 teachers in a high school there, but gives no hint as to the number of pupils. In those from Memphis and Nashville appear 7 teachers, with 461 high school pupils. In the 23 cities and institutions aided from the Peabody fund appear 4 institutions called high schools, in addition to the above, but this does not always, at the South, indicate a public school.

PRIVATE SECONDARY SCHOOLS.

In 2 schools for boys, 9 schools for girls, and 36 for both sexes, outside of the public school system, there have been reported to this Bureau 4,009 pupils under 146 teachers. Of these 535 are in classical studies, 244 in modern languages, 267 preparing for a classical course in college, and 198 for a scientific course. Mechanical drawing is taught in 8 of these schools, free hand drawing in 10, and vocal and instrumental music in 28. Chemical laboratories are reported by 6, philosophical apparatus by 8, and libraries of 50 to 3,000 volumes by 15, the aggregate number of volumes being 13,735.—(Returns for 1876.)

PREPARATORY DEPARTMENTS.

Eighteen preparatory departments of colleges and universities report for 1875–'76, 37 teachers and 1,934 pupils, of whom 435 were preparing for classical courses and 379 for scientific.—(Returns for 1876.)

BUSINESS COLLEGES.

Two business colleges, one located at Memphis, the other at Nashville, report a total of 7 teachers and 298 pupils. One of these schools teaches the common English branches and correspondence, and both teach penmanship, book-keeping, commercial law and political economy. One has a library numbering 470 volumes.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

COLLEGES AND UNIVERSITIES.

Beech Grove College, Beech Grove, for both sexes, embraces primary, intermediate, preparatory, and collegiate departments. The school is strictly anti-sectarian. Vocal and instrumental music is taught, the former without extra charge.—(Catalogue, 1874-'75.)

Bethel College, McKenzie, (Cumberland Presbyterian,) for both sexes, has preparatory, collegiate, art, music, and scientific departments. There is a separate course for young women, which, like that for young men, covers four years.—(Catalogue, 1875-'76.)

Burritt College, Spencer, is for both sexes, and embraces primary, preparatory, and collegiate departments. Special attention is given to physical development. There is a thorough course in gymnastic and calisthenic instruction under the supervision of a professor of gymnastics.—(Catalogue, 1876-'77.)

Central Tennessee College, Nashville, (Methodist Episcopal,) embraces preparatory, collegiate, normal and theological departments. There are classical and scientific courses, the latter including all the studies of the regular course except the languages.—(Catalogue, 1875-'76.)

Christian Brothers' College, Memphis, (Roman Catholic,) provides preparatory, commercial, collegiate, literary, and scientific courses. The degree of A. M. is conferred on graduates after two years spent in some literary or liberal pursuit.—(Circular.)

Cumberland University, Lebanon, (Cumberland Presbyterian,) embraces preparatory, collegiate, law, theological, and commercial departments. The collegiate provides courses of study for the degrees of A. B., B. S., and C. E. There are also two post graduate courses leading to the degrees of A. M. and Ph. D.—(Catalogue, 1875-'76.)

East Tennessee University, Knoxville, (non-sectarian,) embraces collegiate and preparatory departments, the former including a classical course, a course in agriculture, and one in mechanics. Free tuition is given to students nominated by members of the State legislature, each senator having the right to nominate 2 and each representative 3.—(Catalogue, 1876-'77.)

East Tennessee Wesleyan University, Athens, (Methodist Episcopal,) has collegiate, preparatory, and academic departments, the first embracing classical and scientific courses. Both sexes are admitted, and music is taught.—(Catalogue, 1874-'75.)

Fisk University, Nashville, (non-sectarian,) has preparatory, collegiate, normal, and theological courses. Graduates of the classical course will receive the degree of A. M. after three years spent in some scholarly occupation. Both sexes are admitted.—(Catalogue, 1876.)

Greeneville and Tusculum College, Home, (non-sectarian,) has preparatory and collegiate departments, the latter with classical and scientific courses.—(Catalogue, 1875-'76.)

Hiwassee College, near Sweetwater, (Methodist Episcopal South,) has preparatory and collegiate departments, the latter with a course in science, formed by omitting the languages from the classical course. A law department has also been organized.—(Biennial catalogue of the college, 1874-'76.)

King College, Bristol, (Presbyterian,) has preparatory and collegiate departments. It was commenced in 1868, without regular classes, with a partial faculty, no endowment, and almost no buildings, and has now more than 30 alumni, respectable college buildings, an endowment of about $37,000, and some valuable real estate.—(Catalogue, 1876.)

Manchester College, Manchester, (non-sectarian,) embraces primary, academic, and collegiate departments, the academic not including languages, unless they be French and German by special choice. Both sexes are admitted.—(Circular.)

Maryville College, Maryville, (Presbyterian,) is for both sexes, and provides preparatory and collegiate departments, and ladies' English and normal courses.—(Catalogue, 1875-'76.)

Mosheim Male and Female Institute, Mosheim, (Lutheran,) has preparatory and collegiate courses of study, and a select course for those who do not wish to pursue the regular curriculum. Both sexes are admitted.—(Catalogue, 1875-'76.)

Mossy Creek College, Mossy Creek, (Baptist,) has primary and preparatory classes and a collegiate department. A. M. is conferred on graduates who have successfully pursued literary studies for a term of 2 or more years.—(Catalogue, 1875-'76.)

Neophogen Male and Female College, Gallatin, (non-sectarian,) embraces 5 schools, viz, humanities, ancient languages, mathematics, philosophy and history, and moral science. A scientific course is formed by excluding from this list the ancient languages. Music, penmanship, phonography, mnemonics, Anglo-Saxon, Italian, Spanish, French, German, and comparative philology are optional studies.—(Catalogue, 1875.)

Southwestern Baptist University, Jackson, embraces an academic department and a department of literature and science, the latter embracing 7 schools, viz, Latin, Greek, mathematics, natural science, moral science, English, and German and French. The degree of A. M. is conferred on students who graduate in all the schools.—(Catalogue, 1875-'76.)

Southwestern Presbyterian University, Clarksville, formerly Stewart College, was chartered as a university in 1875, and is under the control of the synods of Alabama, Mississippi, Arkansas, Nashville and Memphis, and Texas. It was resolved by the synods that the institution should be a university in two senses: first, that it offer the largest facilities for thorough culture and for a high standard of graduation; and secondly, that the organization be on the plan of separate and coördinate schools and elective courses. The departments in operation at present are preparatory and collegiate. A biblical course extends through all the collegiate classes.—(Catalogue, 1875–'76.)

University of the South, Sewanee, (Protestant Episcopal,) has a course of study arranged on the plan of independent schools. Those already organized are (1) ancient languages, (2) mathematics, (3) civil engineering and physics, (4) metaphysics and English literature, (5) political economy and history, (6) geology and mineralogy, (7) theoretical and experimental chemistry, (8) moral science and evidences of Christianity, (9) modern languages and literature, (10) commerce and trade, (11) theology. The degree of bachelor of letters embraces nothing in mathematics beyond the junior course, and avoids the domain of science and natural philosophy. That of B. S. embraces a full course of mathematics with political science, history, chemistry, geology, and mineralogy, and some Latin, omitting Greek.—(Catalogue, 1876–'77.)

Vanderbilt University, Nashville, (Methodist Episcopal South,) is organized with 4 distinct departments, viz, (1) philosophy, science, and literature, (2) biblical, (3) law, and (4) medical. In the department of philosophy, science, and literature the course of study is divided into 10 distinct schools, from which are arranged a collegiate course of 2 years and a university course of 3. The studies of the schools are so arranged that a student of average capacity and of commendable diligence, after having completed the college course of 2 years, may obtain the degree of A. B. in 2 additional years, and that of A. M. in 3. The quality and extent of attainments, and not the time consumed in making them, will be the test of fitness for the honors of the institution.—(Catalogue, 1876–'77.)

COLLEGES FOR WOMEN.

Seventeen institutions for the superior instruction of women report a total of 214 teachers and 2,130 students, of whom 468 were in preparatory, 1,084 in regular, 144 in partial, and 30 in post graduate courses. All these schools teach music, 16 specifying vocal and 15 instrumental; all teach French, 14 German, 15 drawing, and 14 painting. Nine report apparatus for the illustration of chemistry and 8 that for natural philosophy; 2 have natural history museums and 4 art galleries. The libraries aggregate 28,000 volumes. The courses of instruction cover from 4 to 7 years.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The State Agricultural College, a department of East Tennessee University, at Knoxville, gives instruction in the theory and practice of agriculture and horticulture and in the principles of mechanics and their application to the arts. A beautiful farm, admirably adapted to its intended uses, has been provided in order that agriculture may be taught practically as well as theoretically. In the mechanical course, drawing, engineering, and chemistry are prominent features. Both courses include, in addition to the technical studies belonging to them, the French and German languages, English literature, and the higher mathematics. Each leads to the degree of B. S.—(Catalogue, 1875–'76.)

Scientific courses, schools, or departments also exist in connection with Bethel College, Central Tennessee College, Christian Brothers' College, Cumberland University, East Tennessee Wesleyan University, Greeneville and Tusculum College, Neophogen College, Southwestern Baptist University, South Western Presbyterian University, University of the South, and Vanderbilt University; for which see the statement of the courses of these colleges in the matter under Superior Instruction.

THEOLOGY.

Instruction in theology is given in departments connected with Cumberland University, Central Tennessee College, Vanderbilt University, and Fisk University. A department of theology has been organized in connection with the University of the South, but it is not yet in full operation. The course of instruction in Central Tennessee College and in Fisk University covers 3 years, in Cumberland University 2. The length of course in Vanderbilt University for college graduates is not stated, but the English course, established for the benefit of those who do not wish to study Latin and Greek, lasts 2 years.—(College catalogues and special returns.)

LAW.

Schools of law exist in connection with Cumberland University and Vanderbilt University. The course of study in Vanderbilt covers 2 years, in Cumberland University 1. A law department has also been organized in connection with Hiwassee College. Length of course not given.

MEDICINE.

The Medical Department of the University of Tennessee, Nashville, is continued, though the collegiate department is merged in the Normal College. It is the purpose of the faculty to make the teaching thorough and practical. Five didactic lectures will be delivered daily in the college halls, upon the different subjects of the course, and dur-

ing the week the students will hear 4 lectures on each branch of medicine. Daily examinations will be held by each professor at the beginning of his lecture hour, that the facts of the preceding lecture may be impressed upon the minds of students. The lectures, too, will be illustrated by experiments, dissections, surgical operations, clinics, models, and anatomical, botanical, and chemical specimens.—(Announcement for 1876–'77.)

The Medical Department of Vanderbilt University, Nashville, makes precisely the same statement of its purpose as that above given.—(Announcement for 1876–'77.)

The Tennessee College of Pharmacy, Nashville, organized in 1872, reports a 2 years' course of study, embracing general chemistry, materia medica, pharmacy, toxicology, practical botany, and microscopy.—(Announcement, 1876.)

SPECIAL INSTRUCTION.

TENNESSEE SCHOOL FOR THE DEAF AND DUMB, KNOXVILLE.

This school was organized in 1845, and is under the control of a board of trustees. The number of pupils attending in 1876 was 122, of whom 79 were males and 43 females. The branches of study are the same as those taught in the common schools.—(Return, 1876.)

TENNESSEE SCHOOL FOR THE BLIND, NASHVILLE.

This school was founded in 1844, and has had since that time a total attendance of 251. The branches studied are arithmetic, algebra, spelling, reading, writing, grammar, history, geography, physiology, elementary geometry, and natural philosophy. The employments taught are broom making, beadwork, hand and machine sewing, crocheting, telegraphing, knitting, and piano tuning. Special attention is given to music. The use of the piano, church and reed organ, flute, clarinet, and of the various kinds of brass instruments, with class and solo singing, harmony, and the history of music, is thoroughly and scientifically taught. Attendance in 1876, 51.—(Printed report and special return, 1876.)

OBITUARY RECORD.

HON. SAMUEL WATSON.

Samuel Watson, born at Barrington, Rhode Island, July 16, 1807, was graduated at Brown University in 1825; he studied law at Litchfield, Conn., and soon after settled in Nashville, Tenn., where he died September 26, 1876. At the time of his death he was a member of the State board of education, a member of the board of trustees of the University of Nashville, and a member of the board of trustees of the Peabody fund.

He was an earnest, strong, and wise friend of the measures calculated to improve the material, intellectual, and moral interests of the community in which he lived. In the late war he adhered to the Union, and when the war was over sought in every way to restore prosperity to his State. An able financier and political economist, he greatly aided the several legislative measures which have resulted in the present educational progress in Tennessee.

LIST OF SCHOOL OFFICIALS IN TENNESSEE.

Hon. LEON. TROUSDALE, *State superintendent of public schools, Nashville.*

STATE BOARD OF EDUCATION.

Members.	Term.	Post-office.
His excellency James D. Porter, governor, ex-officio president		
J. Berrien Lindsley, secretary	1875–1881	Nashville.
E. H. Ewing	1875–1879	Nashville.
R. W. Mitchell	1875–1883	Nashville.
Leon. Trousdale	1876–1881	Nashville.
J. W. Hoyt	1876–1879	Nashville.
H. Presnell	1877–1883	Nashville.

COUNTY SUPERINTENDENTS.

[Term, 1877–'78.]

County.	Superintendent.	Post-office.

TEXAS.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Texas from 1839; Paschal's Digest of these, 1870, pp. 569-583; the same, 1873, pp. 1347-1359; Constitutions of 1845, 1866, 1869, and 1876; Statistics of United States Census for 1850 and 1860; State Reports from 1871.

ACTION BEFORE UNION WITH THE UNITED STATES.

When hardly more than fairly out from the struggle for an independent life, January 26, 1839, the legislature of the then republic of Texas made provision for future free schools by giving each organized county 3 leagues of land, divided into tracts of 160 acres each, for the purpose of establishing a primary school or academy in the county. The following year a further donation of one league was made to each county.*

The lands thus granted were to be located in the county if good ones could be found vacant. If lands proper for this use did not exist in the county, they might be surveyed upon any vacant part of the domain of the republic at the expense of the county. These provisions were closely akin to those which, from the year 1787, have prevailed in the United States for giving in each township of new States or Territories one or more sections of land "for the use of schools"—the 16th section up to 1848, the 16th and 36th since that time—or lands equivalent to them.†

An act of February 5, 1840, made the chief justice and two associated justices of each county ex officio a board of school commissioners for the county, with power to hold and dispose of all property given or granted in any way for the benefit of schools or academies within it, provided that no act of theirs should be valid unless it should have for its object the establishment, benefit, or support of schools in that particular county. It was made their duty to organize any parts of their county into school districts whenever in their judgment the interests of education required it. They were to be inspectors of schools, and by themselves or others were to examine teachers, giving certificates of character and qualification to such as they might find deserving of them; and without such a certificate no teacher of any public school could be entitled to compensation for services. Teachers for academies were required to be graduates of colleges or universities, and teachers of common schools to be competent to teach reading, writing, English grammar, arithmetic, and geography.

On the basis thus established the more settled counties seem to have set up schools, the census of 1850 showing 349 reported as public schools, with 360 teachers and 7,946 scholars, although no State funds or district taxes are reported as going toward their support.

ACTION AT THE TIME OF ENTERING.

The constitution under which Texas entered the Union in 1845 declared it to be the duty of the legislature to make suitable provision for maintenance of public schools. It also said: "The legislature shall, as early as practicable, establish free schools throughout the State, and shall furnish means for their support by taxation on property; and it shall be the duty of the legislature to set apart not less than one-tenth of the annual revenue of the State derived from taxation as a perpetual fund, which fund shall be appropriated to the support of free public schools, and no law shall ever be made diverting said fund to any other use; and until such time as the legislature shall provide for the establishment of such schools in the several districts of the State, the fund thus created shall remain as a charge against the State, passed to the credit of the free common school fund." The same instrument went on to provide against the alienation, except by temporary lease, of public lands granted for public schools, and to assure to each county its fair and equal share for such purpose.

INSTITUTION OF A SYSTEM.

For some time after the admission of the State the sparseness of the population and the disorders growing out of the war with Mexico hindered the carrying out of the excellent provisions of the constitution. But on the 13th of January, 1854, when the confusion of that war was at an end, and population was beginning to fill up the waste places of the State, an act to establish a system of schools was approved. By this act

*An act of January 16, 1850, extended to counties organized subsequently to these others the grant of the same amount of 4 leagues of land "for purposes of education."

†Apparently following again the example of the United States, Texas, in the same act, devoted a tract of 50 leagues of land to the establishment and endowment of 2 colleges or universities thereafter to be created, the cost of surveying this tract to come out of the general treasury.

$2,000,000 were set apart for a school fund in 5 per cent. bonds of the United States, the interest of this only to be annually used, and to be distributed among the counties for the support of schools, on the basis of the free white population in each county from 6 to 16 years of age. With a view to the establishment of schools to be supported from this fund the chief justice and county commissioners of each county were to be a board of school commissioners for the county, to lay it off into school districts, number these, and order an election of 3 trustees of schools in each district. The trustees elected were to hold an election in their districts for the location of school-houses, no change of such location to be made afterward without a new election; and until a good and substantial school-house with the necessary seats and other fixtures should be provided, no money for school purposes was to be drawn from the county treasury. The trustees were also to call together in due time the persons having children to be educated, and get from them an indication of the length of the school term and kind of teacher they desired, and the amount of salary they were willing to pay such teacher. They were then, observing these instructions, to employ teachers of suitable character and qualifications, and from time to time visit the schools and exercise a general supervision over them. If the funds from the State and from subscribers should not be sufficient to pay the salary of the teacher for the term agreed upon, the trustees were authorized to levy rate bills for the supplementing of that salary. Deficiencies from non-payment of these rates were to be made good for persons unable to pay them from the State taxes for schools, on the statement of the facts by the chief justice of the county.

To determine the rates of the State apportionment of its school funds, the assessors and collectors of taxes were to send up to the State treasurer each year a statement of the number of children of school age in each school district, and to file a like statement in the office of the county clerk.

The State treasurer was to be ex officio State superintendent of the public schools, and as such was to make record of the population of school age, as returned by the assessors and collectors, and make to the county treasurer an apportionment based on this record. The trustees of districts were to report to him annually by the first Monday in September, and he to report to the governor by the first day of October, the condition of the schools.

Nothing in this act, it was stated at the close, was to prevent the trustees of any district from employing the teacher of a primary department in any college or academy, or from converting such primary department into a common school for their district, if instructed to do so by the patrons of schools in it. This provision has since largely affected the public school system of the State, leading, in many instances, to the engrafting of public schools on private or incorporated ones.

The system thus instituted continued to be that of the State until the war of secession threw things again into confusion, and under it there was reported in the census of 1860 a total of 1,218 public schools, with 1,274 teachers, 34,611 pupils, and an income of $414,168; of this, $6,743 were from endowments, $15,847 from taxation, and $58,394 from public funds,* far the largest portion, about four-fifths, coming apparently from tuition fees.

Plainly enough, the schools were not yet in any proper sense free schools, when less than one-fifth of the cost of their support came from the State in aid of the payment of the teachers, and the remaining four-fifths from those who sent their children to them; this, too, although from May 13, 1846, one-tenth of the annual revenues of the State, in addition to the interest of the school fund, was said to have been appropriated for school purposes, according to the constitution.

THE SYSTEM FOLLOWING THE WAR.

On coming out of the war of the secession the State found its resources crippled, its school fund wasted, and its schools generally closed. Waiting a little to remedy the first evil, it undertook in its new constitution of 1866 to remedy the other two. This instrument, repeating in its article on education much of the phraseology of that of 1845, rededicated to the school fund, as a basis for the endowment and support of the free school system, "all the funds, lands, and other property heretofore set apart and appropriated for the support and maintenance of public schools," as well as any that might subsequently be set apart and appropriated. It further devoted to that fund all the alternate sections of land reserved out of grants to railroad companies or other corporations, together with one-half of the proceeds of all future sales of public lands. It took from the legislature the power to loan any portion of the school fund, and required the investment of its moneyed principal in bonds of the United States or of the

*It is evident from this statement (if the census returns are correct) that the interest of the $2,000,000 devoted to school fund by the law of 1854 was not at this time distributed according to that law. Perhaps an explantion may be found in the fact that in a law passed August 13, 1856, and approved on the 29th, the State authorized the putting of the school fund out of its own hands by loaning it to railway companies, most of whose roads were still incomplete, and whose capacity to fulfil pecuniary contracts was thus quite uncertain. Large losses from such risks very probably occurred at this time, as they certainly did afterward.

State of Texas, or in such bonds as the State might guarantee. It put under the control of the legislature lands granted or to be granted to the counties for public schools, requiring that the proceeds of the sale of them should be added to the school fund of the State and the interest arising be granted to the counties for their schools. And while giving to the legislature authority to levy a tax for educational purposes, to be distributed from year to year as it should be collected, it specially provided for a hitherto neglected class by directing that all the funds which should in such taxation be collected from Africans, or persons of African descent, should be exclusively appropriated to the maintenance of a system of schools for Africans and their children.

Renewed provision was made for the university* or universities before contemplated, as well as for four special schools; for the supervision of the new school system the governor, with the advice and consent of the senate, was directed to appoint an officer to be styled the superintendent of public instruction, whose term of office should be 4 years, and who, with the governor and comptroller, should constitute a State board of education, and have the general management and control of the common school fund and of common schools, under such regulations as the legislature might prescribe.

The constitution of 1869 did not materially alter these provisions, with one marked exception, save by additions to them. Thus it added that the superintendent of public instruction should, after the first term of office, be elected by the people; and while providing, like the former ones, for the institution of a uniform system of public free schools, it directed that the legislature should make attendance on these schools compulsory on all the scholastic population for at least 4 months yearly, unless the children should be instructed for that time elsewhere. It also added the remaining half of the proceeds of the sale of public lands to the half which had been previously devoted to the school fund. The exceptional change noted was significant: the appropriation of the taxes of colored persons to schools for their children was omitted, but the schools were made free to all.

Under these constitutional provisions a law was passed August 13, 1870, directing that a State superintendent of public instruction should be appointed by the governor to serve until the next general election, and then and thenceforward be elected by the people for the term of 4 years. Each organized county was made a school district, and each county court a board of school directors for it, with the duty of dividing it into subdistricts and of appointing annually boards of school trustees for these, as well as county examiners for teachers. The boards of school directors were to be subject to the direction of the State superintendent, and the boards of school trustees to be under that of the school directors, to aid them in locating and building school-houses and in employing and settling with teachers; no teacher, however, was to be employed or paid unless examined and certified by the county examiners. Private teachers were to be allowed to participate, as before, in the benefits of the school fund, when there was no public school in the district, but must, in order to do this, be examined and certified by the county examiners like others.

The public schools were to be taught at least 4 months each year, and the directors were to see that all children between 6 and 16 years of age were sent to them for that period, unless instructed elsewhere. For the support of them there was to be set apart one-fourth of the annual State revenue from taxation, the annual poll tax of $1, and the interest of the permanent school fund; but this was to go only for the payment of teachers' salaries and the expenses of the educational bureau, each county or district providing for the other expenses of the schools.

Acts of April 24, 1871, and of November 29 in the same year, amended this law, the former increasing the salary of the State superintendent, somewhat simplifying his duties, and directing him to appoint for each judicial district a supervisor of education; the latter directing the board of education, (now composed of the governor, State superintendent, and attorney-general,) to apportion anew the territory of the State into convenient educational districts, not to exceed 12 in number. And, when such division should be made, the superintendent, with the approval of the governor, was to retire all existing supervisors of education and appoint one for each of the 12 districts, he to hold office for 4 years, to act as an examiner of teachers, to subdivide the counties in his jurisdiction into convenient school districts, appointing for each, with the approval of the State superintendent, 5 school directors. These directors might levy taxes, not exceeding 1 per cent., for building school-houses and supplementing the State funds for sustaining schools. They were also to require the attendance on them of all the scholastic population of their districts for a term of at least 4 months each year, the penalty for non-attendance to be $25 and costs, to be collected from parents and guardians of non-attending children.

The first report of the superintendent under this system, to December, 1871, showed 1,324 schools existent, with 1,578 teachers, and an attendance of 63,504 out of 229,568 given as of school age in the census of 1870; the schools being supervised by 615 school directors in 123 counties, and by 35 district supervisors in as many judicial districts.

* The University of Texas had been established by law in 1858, and $100,000, with the 50 leagues of land set apart by act of 1839, had been appropriated to it for establishment and maintenance.

Of the schools, 1,107 were said to have been graded. The next report, for 1871–'72, showed 127,672 enrolled scholars, under 2,233 teachers, in 2,000 schools. That for 1872–'73 made the enrolment 129,542, under 2,297 teachers, the superintendent stating that private schools had been largely absorbed into the public school system.

NEW SYSTEMS UNDER NEW LAWS.

Under a law passed May 22, 1873, and amended May 2, 1874, and March 15, 1875, the State superintendency and county boards of directors were retained; the State board of education, the supervisors of the large districts, and the county examiners were dropped; the chairman of the county board was made ex officio county superintendent, with the duty of examining teachers; and the trustees of school districts, 3 in number, were now ordered to be elected by the voters of the district, instead of being appointed by the county directors as before. The compulsory feature of former laws was retained, but with larger exceptions as to the enforcement of it, and with a change of penalty for non-attendance from $25 and costs to a forfeiture of interest in the public school fund for the time of failure to attend, unless there was evidence of being taught for that time by a private school teacher with a public school certificate of competency. Schools for both white and colored children were provided for, and the previously allowed engrafting of public schools on private institutions was made more explicit and distinct.

Under this system there were reported, for 1873-'74, in private and public schools, 102,689 pupils under 2,491 teachers, the schools numbering 2,261; while for 1874-'75 the enrolment was, in 97 counties reporting out of 139 in all, 124,567 pupils under 3,100 teachers in 2,924 schools.

Still further change was made under the new constitution of 1875; a law being enacted in August, 1876, which dropped the State superintendency, county superintendency, and county boards of directors; threw the county school lands again into the hands of the counties; and substantially put the whole school system under the control of a revived State board of education and of voluntary school communities to be organized throughout the State. The school age was made 8 to 14, and the power of local taxation for school purposes abolished. The effect of these last changes seems to have been temporarily disastrous to the State school system; so much so, that no detailed report of it has been ventured on or possible since the autumn of 1875. A bright future, however, is predicted by the late superintendent, now secretary of the State board of education.

SUPERVISION.

The names of the State treasurers who, under the law of 1854, acted as State superintendents of the public schools have not been learned as this matter goes to press. Those who, under the constitution of 1866 and laws of 1871 and 1873 were State superintendents of public instruction were (1) J. C. De Gress, who, amid many difficulties, organized the new system under the former law; and (2) O. N. Hollingsworth, who brought it to its highest point under the latter law. He still, as secretary of the State board of education, watches over what is left of the school system he served from January, 1874, to April, 1876.

The changes among minor supervising officers have been sufficiently noticed in the preceding sketch of the school history.

ELEMENTARY INSTRUCTION.

CONDITION OF THE STATE SCHOOL SYSTEM.

A letter from the secretary of the board of education states:

(1) There was no report made of the public school affairs of this State for the scholastic year ending August 31, 1876.

(2) This hiatus in our public school affairs was caused by the action of our late constitutional convention in abolishing the office of superintendent of public instruction. The convention assembled on September 6, 1875, and it was known early in October that the terms of the new constitution would work a radical change in our public school system. The failure of the framers of the constitution to provide for future legislation for payment of teachers and school officers, under the then existing school law, for service performed after January 1, 1876, and prior to August 31, 1876, had the effect, in a great measure, to suspend public schools after the former date. On the 18th April, 1876, the new constitution went into effect and became the organic law of the State, and from that time to the 1st September, 1876, public schools were suspended. In fact, the schools were generally closed as early as January 1, 1876.

(3) The result of this complete revolution in our school affairs was general confusion, a failure upon the part of teachers to report to county superintendents, and a consequent failure of county superintendents and other school officers to report to the State department of public instruction while it was in existence.

(4) Under our former constitution the scholastic age embraced all between 6 and 18;

under the present all between 8 and 14. Under the former constitution and laws, a legal tax for school purposes was authorized in addition to one-fourth of the general revenue; under the present constitution and laws no local tax is authorized, but one-fourth of the general revenue and the entire interest on school bonds are set apart for school purposes.

The present school law determines a school community or district by the individual citizenship thereof, rather than by geographical lines, as was formerly the case. It is giving better satisfaction than any school law we have ever had. Reports so far received indicate a large increase in enrolment in our public schools. Some counties report 3,000 pupils within scholastic age enrolled in public schools. The reduction of the scholastic age necessitated the blending of our private and public schools under one supervision. The trustees of the public schools, appointed by the county judge, are authorized to contract for the instruction of pupils over and under the scholastic age, as well as those within the scholastic age. Parents, however, are required to pay the tuition of pupils over and under scholastic age.

(5) Between 6 and 18 years of age we have a population of about 500,000, and between 8 and 14 about 250,000.

(6) Our school year begins September 1 of each year, and ends August 31.

(7) Public schools are maintained under the present law on an average about 3 months. Some counties have run their schools 5 months. Trustees are limited in the payment of teachers to $1.50 per month for each pupil within the scholastic age.

(8) Five hundred thousand dollars were apportioned by the board of education to the various counties of the State for the support of public schools for the year beginning September 1, 1876.

(9) Each county has, of its own right, 4 leagues of land donated by the State to the counties for the benefit of public schools. Many of these lands are now being put upon the market and being taken at good prices on long interest payable annually, which interest is applied to the support of the schools. This will enable such counties as make sales this year to extend their school term next year to six months.

(10) I am confident I shall be able to make a good report in time for your next annual statement.

(11) I will be able this year to get a full and complete census, and hope to receive also satisfactory reports from county judges. Our public school system is upon a better basis, in many respects, than it has ever been, and I am hopeful of the future.

TRAINING OF TEACHERS.

NORMAL DEPARTMENT.

The normal department of Wiley University, at Marshall, in connection with academic studies, teaches normal methods, keeping of school records, and the school laws of Texas. The course covers a period of 2 years.—(Circular of university.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

No information respecting public high schools in this State for 1876 has been received by this Bureau. Their place is probably largely occupied by private academies and seminaries under a provision of the school law which permits the blending of public free with private pay schools.

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 7 for girls, and 10 for both sexes, outside of the public school system, there have been reported to this Bureau 996 pupils under 51 teachers. Of these 118 are in classical studies, 227 in modern languages, 39 preparing for a classical course in college, and 84 for a scientific course. Mechanical drawing is taught in 2 of these schools, free hand drawing in 3, and vocal and instrumental music in 4. A chemical laboratory is reported by 1, philosophical apparatus by 2, and libraries of 130 to 1,200 volumes by 7, the aggregate number of volumes being 4,360.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Four preparatory departments and 1 preparatory school report a total of 10 teachers and 703 pupils, of whom 63 were preparing for classical and 65 for scientific courses. The school had a library of 1,200 volumes.

SUPERIOR INSTRUCTION.

COLLEGES.

Baylor University, Independence, (Baptist,) gives instruction, to males only, in all the branches of academic and collegiate education.—(Circular, 1876–'77.)

Salado College, Salado, (non-sectarian,) is for both sexes and embraces collegiate and preparatory departments.—(Catalogue, 1875.)

Southwestern University, Georgetown, (Methodist Episcopal South,) embraces in its curriculum 12 separate schools, viz, (1) mental and moral philosophy, (2) Latin, (3) Greek, (4) pure mathematics, (5) applied mathematics, (6) German, (7) Spanish, (8) English language and literature, (9) history and political economy, (10) chemistry and geology, (11) a commercial and (12) a preparatory school. The course is elective.—(Catalogue, 1876–'77.)

Texas Military Institute, Austin, (non-sectarian,) is modelled, as to discipline, after the United States Military Academy at West Point. The course of instruction, however, is widely different, embracing those branches of study usually taught in the best literary and scientific institutions. The military feature of the institute is entirely subordinate to the academic, having been adopted solely for the purpose of government and discipline and of affording the students physical exercise.—(Catalogue, 1875–'76.)

Trinity University, Tehuacana, (Cumberland Presbyterian,) embraces preparatory and collegiate departments, (the latter with a separate course for women;) also a law school, a school of modern languages, a commercial school, and music and ornamental departments.—(Catalogue, 1874–'75.)

Waco University, Waco, (Baptist,) has primary, preparatory, and collegiate departments, with classes in music, art, French, German, and Spanish. Both sexes are admitted.—(Catalogue, 1876–'77.)

Wiley University, Marshall, (Methodist Episcopal,) was established in 1873 for the especial benefit of the freedmen, though it is open to all races. It does not seem to have advanced beyond the condition of a preparatory school, and its statistics may be found in Table VI, Part 3.—(Circular.)

COLLEGES FOR WOMEN.

Six institutions for the superior instruction of women report a total of 40 teachers and 353 students. Of the students, 123 were in preparatory departments, 158 in regular, 9 in partial, and 17 in post graduate courses. All these colleges teach vocal and instrumental music and painting; 4 teach French and German, 1 Italian, and 1 Spanish. Two have apparatus for the illustration of chemistry and 3 that for natural philosophy. The volumes in libraries aggregate 1,150 volumes.—(Returns, 1876.)

a Includes society libraries. *b* Also 70 graduate students.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

State Agricultural and Mechanical College, at Bryan, chartered in 1871, was organized in October, 1876. Out of the 90 students attending in 1876, 60 were pursuing a regular and 30 a partial course. Tuition is free.—(Return for 1876.)

LAW.

The law school of Trinity University furnishes a course of study including Blackstone's and Kent's Commentaries, Stephen (with Sayles) on Pleading, Parsons on Contracts, Greenleaf on Evidence, Story's Equity Jurisprudence, Washburn on Real Estate, and Spanish Law of Real Estate.—(Catalogue, 1874–'75.)

MEDICINE.

The Texas Medical College and Hospital, at Galveston, chartered in 1871, had its first session in 1873–'74. Twelve graduates received the degree of M. D. in 1876.—(Return, 1876.)

Statistics of schools for scientific and professional instruction, 1876.

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Texas Institution for the Blind, at Austin, reports an attendance of 60 pupils. The studies pursued during 1875–'76 were orthography, etymology, reading, writing, arithmetic, algebra, English grammar, geography, ancient and modern history, natural philosophy, natural history, Spanish, music, and telegraphy. The employments taught are broom, mattress, and pillow making, chair seating, sewing, beadwork, and knitting.

In the fall of 1874 an appropriation was made by the legislature of the State for the appointment of an oculist for the institution. The result has been that a number of skilful operations have been performed, thereby improving the sight of many and restoring sight to several who were in total darkness.—(Report of trustees and special return, 1875–'76.)

EDUCATION OF THE DEAF AND DUMB.

The Institution for the Education of the Deaf and Dumb, Austin, reports an attendance of 47, of whom 30 were males and 17 females. The studies pursued in it are "the ordinary branches of a plain English education." The only provision for mechanical employment is a printing office, in which 5 of the boys have been employed, and have made rapid progress in learning the art of printing.—(Report of superintendent and special return, 1875–'76.)

*The average daily attendance for 1875 is not given as a total in the report, but it is here made out by multiplying together the number of schools reported and the average daily attendance in each. That for 1876 is said by the superintendent to be too small for the entire State by reason of omissions in some of the returns.—(Note on p. 2 of appendix to State report.)

(Report for 1875 and 1876, and special return of Hon. Edward Conant, State superintendent of education, for 1876.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

State Reports, especially of 1874 and 1876; Barnard's Common Schools and Public Instruction; Letter from Superintendent Conant; Laws of Vermont from 1782; Williams's Compiled Statutes, pp. 140–158; General Statutes, Article Education.

THE ERA OF INDEPENDENT SCHOOLS.

Settled early by a people accustomed to the State school systems of New Hampshire, Massachusetts, and Connecticut, Vermont had schools before she had school laws to call for them. Feeling the want of education for their children, the first inhabitants, as soon as organized into communities, seem generally to have instituted such means of literary training as were practicable. An appendix to the State report for 1876 shows a steady succession of town actions looking to this end from 1761 to 1787. Instead of waiting, as in many of the States, for teachers to establish schools and invite the children to them, the people here set up the schools and then invited teachers. This early independency of action left its impress for some time on the system introduced, which was that of town or district schools controlled almost entirely by the communities that had established them. The first school law that appears upon the statute books, passed October 22, 1782, gave legal sanction to this system by authorizing towns too large for one school to divide themselves into convenient school districts, appoint trustees for the care of schools, and provide for establishing and supporting these schools, partly by rates and partly by taxes or subscriptions. The constitution of 1793, two years after the admission of Vermont as a State, finding this system already in existence, only gave further sanction to it by aiming to extend and perfect it, declaring that "a competent number of schools should be maintained in each town for the instruction of youths, and that one or more grammar schools should be incorporated and supported in each county in this State." A law of October 20, 1795, only enlarged the powers of districts and gave them a share of public school moneys proportioned to their number of children of school age.

THE ERA OF STATE SUPERVISION.

The first show of State control over the previously independent town and district schools was in 1797, when the legislature, October 31, undertook a little mild direction of them by enacting that each town should keep and support a school or schools for the instruction of youth in English reading, writing, and arithmetic,* and by requiring that a district failing to support a school for the whole year should not receive its portion of the town school tax. In 1825 legal provision for forming a State fund to aid the schools was made, and having shown that much regard for these literary nurseries of her children, though the contemplated bounty never reached the schools, the State ventured on a somewhat larger exercise of directive and supervising power by providing, November 9, 1827, (1) for a board of State commissioners of common schools, to recommend text books for them and to examine and report concerning them; (2) for superintending school committees in each town, to have general charge and supervision of town schools; and (3) for a collection and report of school statistics by the secretary of state. This law, however, going too far beyond the prevailing public sentiment of that time to meet with favor, proved unpopular and ineffective, and, except the superintending school committees, little of it long remained. Still, the idea of State supervision, as a necessity toward thorough schools and general interest in them, gradually grew and strengthened, and November 5, 1845, a law was passed creating a State, county, and town superintendency of schools; the first for supervising all school interests, the second for stirring up a stronger feeling in favor of them in the counties, and the third for improving the efficiency of the instruction in the towns. This, also, as respected the two first named officers, went against the prevailing partiality for town independency in such affairs, and November 5, 1849, the county superintendency was abolished; the State superintendency was dropped in 1851, and only town superintendence, which towns might have or not as they should choose, was left to survive.

November 18, 1856, the State again asserted her right to supervise the schools by creating a State board of education for general direction of public schools with a secretary, to whom were assigned most of the duties of a State superintendent. This system lasted until November 18, 1874, when the State board was abolished and the State superintendency resumed. It still continues.

Not now to name the members of the State board of school commissioners under the act of 1827 or of the State board of education under that of 1856, the representatives of State supervision have been: As superintendents of common schools, Horace Eaton, 1845–'50; Charles G. Burnham, 1850–'51. As secretaries of the State board of education, John S. Adams, 1856–'67; Andrew E. Rankin, 1867–'70; John H. French, 1870–'74. As State superintendent of education, Edward Conant, from 1874 to the present time.

During the service of the first State superintendents the power of districts to raise money by rate bills on pupils attending schools was limited to the two purposes of providing fuel for the schools and of paying for the board of teachers. Provision was also made for the holding of teachers' institutes. During that of the secretaries of the

*In section 19 of chapter 22 of the General Statutes these studies are increased by the addition of English grammar, geography, history, and Constitution of the United States, with special instruction in the geography and history, constitution and principles of government of the State of Vermont.

State board of education the proper grading of schools received attention, rate bills were abolished, normal schools established, and State certificates to teachers, avoiding the necessity for continual reëxamination, were provided for. During that of Mr. Conant provision has been made for county examination and licensing of teachers, for a renewal at the normal schools of State licenses to teach, and for the establishment of training schools in connection with graded schools.

ESTABLISHMENT OF NORMAL SCHOOLS.

The earliest school for the training of teachers of which record is made was a "select school" taught at Danby during the years 1785 to 1788 by Jacob Eddy, the Quaker town clerk, it being "expressly for the purpose of training young men for the vocation of teaching." A similar work, and a most influential one, was done for ladies by Mrs. Emma Willard, in her school at Middlebury, commenced in 1814. In 1823 Rev. S. R. Hall established the Concord Academy, in which was instituted, in 1824, a regular normal school course, which was continued for six years. In 1840 we find a teacher's department with a three years' course of study in Craftsbury Academy, also organized by Mr. Hall. In 1847 a normal school and teachers' institute was begun, and continued two years, at Brattleboro', by Rev. Addison Brown, then county superintendent of common schools for Windham County. At this time the formation of teachers' classes in the academies had become very general; it has been continued in the best of them to the present time, with good results.

In 1861 a school for teachers was established in the Orange County Grammar School at Randolph, the school for several years retaining its classical department, while giving primary importance to the preparation of teachers. In 1866 the classical department was given up, and the school was entirely devoted to the preparation of teachers. In the following year it became a State normal school, in accordance with a law passed by the legislature of 1866 providing for the establishment of three State normal schools.

The Lamoille County Grammar School, at Johnson, through the joint action of its trustees and the board of education, became a State normal school, and began operations as such on the same day with the Randolph school.

In the course of the same year a third normal school was established at Castleton, in connection with the Castleton Seminary.

What is peculiar in the normal school system of Vermont is the mode of attempting to utilize, direct, and supplement local forces for the purpose of training teachers for the common schools of the State.—(State report for 1875–'76, pp. 33–36.)

SCHOOL FUNDS.

The funds employed for the support of the common schools are mostly derived from four sources: the rent of school lands, income from the United States deposit fund, taxes on the grand list of the towns, and taxes on the grand list of the districts. The money accruing from the first three of these sources in the towns having school districts constitutes the public money which is divided among the districts. This public money is about one-sixth part of the whole sum expended for the support of schools, and in most towns is largely derived from a tax on the grand list of the town known as the State school tax. This public money, from whatever source derived, is the property of the town, which is held accountable by the State for the right use of it in the support of schools. The State school tax varies from a certain number of mills to 9 cents on the dollar of the grand list. In some towns a town school tax is voted in addition to the State school tax and in others to the exclusion of the State school tax, carrying the tax on the grand list of the town in some cases up to 20 cents on the dollar. The number of towns having school districts and not reported as raising a school tax on the grand list of the town is small. We have, then, remarks the superintendent, 241 republics organized as pure democracies, possessed of large municipal powers, each voluntarily accepting the support of schools as a part of its duty, and each acting upon the principle that the school is of benefit to every citizen and that every citizen is bound to contribute to its support.—(State report for 1875 and 1876, pp. 36–38.)

ELEMENTARY INSTRUCTION.

ATTENDANCE.

There are few towns in the State that do not report the number of children of school age and the number attending school. Taking those that report both items it appears that not quite 77 per cent. of the children of school age are attending the common schools. Taking those towns that report both the number attending and the average daily attendance, it appears that the latter is less than 60 per cent. of the whole number attending, or only about 48 per cent. of the number of children of school age. It should, however, be remembered that a few thousand children are attending schools other than the common schools; that the school age extends to 20 years, and that many complete the course offered in the common schools before reaching that age. But after making all reasonable allowances the percentage of attendance is regarded

as quite too small. Although the State has provided schools for the accommodation of all the school population, it is found that less than half that population is in average daily attendance. How to secure a larger enrolment and a larger average attendance is felt to be among the most important of questions.—(State report for 1875 and 1876, pp. 45–47.)

COMPULSORY LAW.

The question being settled that provision for the education of all must be free to all, that all the property and that every poll must contribute to the support of schools, the next step is to the assertion that all children must be taught in the schools. This assertion has already been made. The compulsory acts of 1867 and 1870 have this idea as their foundation, but it is a question whether these laws have yet had any perceptible effect on school attendance. One of the prime needs of the educational system is felt to be a compulsory law that shall be effective, but that shall not infringe upon the citizen's sense of personal freedom. How to construct a law that shall send every delinquent child to school and yet increase rather than lessen his and his parents' feeling of independence, is a problem that presses for solution.

In the mean time it is believed that with improvements in the construction and furnishing of school-houses, and with skilful teachers in them all, a large improvement in attendance might reasonably be expected. A larger attendance of the older children might be secured in many towns and neighborhoods by the maintenance of a higher school, which would also direct and stimulate the labor of the lower schools. Moreover, a profitable division of the time for the school terms might be made in many districts; for instance, the substitution of a fall for a winter term where the children are small.

Finally, it is suggested that when the period for constitutional amendment arrives, a strong inducement to school their children might be placed before many citizens by the introduction of an educational test as a qualification for voting and holding office.—(State report for 1875 and 1876, pp. 44–49.)

GRADED SCHOOLS.

The first enactment in the State looking toward a gradation of the common schools was passed in 1841, and the first act making complete provision for such gradation was passed in 1844. There are now 33 graded schools reported, while several others not reported are known to exist. These schools are established by the people of the towns or school districts in which they are, and (except the high school department in one case) are free to all the children of the town or school district. Thus, in 28 villages of the State, the child of the poorest citizen can be fitted to enter the best scientific schools, and in 25 villages he can be prepared to enter college or any department of the university. That such facilities have been created in so many places within the period of one generation, by the silent and voluntary action of the people of the localities, gives assurance that the school system is well founded, and that further progress will certainly be made.

But the opening of facilities for higher education to all is not the only, perhaps not the chief, advantage of the graded school. It is believed to be a better school for instruction in the common branches, throughout the whole course in them, and a better school in its social and moral training than the ungraded school is or can be.

Attention is called to a table showing the rate per cent. of taxation in the graded school districts, from which it appears that not only is the rate low in proportion to the advantages secured in comparison with other districts, but that in a majority of the towns where there are graded schools the highest school tax is not paid by the inhabitants of the graded school district.—(State report for 1875 and 1876, pp. 25–29.)

CENTRAL SCHOOLS.

The law provides for the establishment of a central school or schools by the town, without disturbing any existing district arrangements. Under this plan a moderate tuition fee is charged to each pupil and the income so derived is applied to defray the expenses of the school, and any expense not so provided for is assessed on the grand list of the central school district. The advantage of this plan over the select school or the unfunded academy is that the grand list furnishes a sure basis of support for the school, while the charge for tuition may be reduced to a merely nominal sum, making the school essentially free.—(State report for 1875 and 1876, p. 29.)

LENGTH OF SCHOOL YEAR.

The several school districts of a town are each required to maintain a school for 20 weeks during a school year in order to be entitled to draw any part of the public money for that year. The average number of weeks of school for the year ending March, 1875, was 24.38; for that ending March, 1876, it was 24.18; while for this last year 109 districts reported having less than 20 weeks of school, and 71 districts paying the highest school tax in town, and 46 paying the lowest, had but 20 weeks of school. The

question as to whether this amount of schooling is sufficient has been discussed, and the opinion of town superintendents obtained in respect to it, 180 of the 240 superintendents declaring themselves in favor of an increase. Three-fourths of the whole number, and a majority in each county, think the sessions are too short. The obstacles in the way of requiring a longer school term may be removed, it is suggested, (1) by a union of districts, in consequence of which not only will the longer school be supported without increase of taxes, but a better school will be secured because of the added interest arising from a greater number of pupils; (2) by the adoption of the town system, under which the taxes for the support of schools are made equal throughout the town.—(State report for 1875 and 1876, pp. 42-44.)

SCHOOL LANDS.

In most towns of the State are found school lands. These are lands the rent of which is devoted to the support of the common schools, the county grammar schools, the State university, and particular institutions designated by the donors. Of the lands whose rent is devoted to the support of the common schools some were set apart for that purpose in the original charter of the town, some were set apart in the charter as glebe lands and afterward were by an act of the legislature devoted to the support of schools, and others were given by individuals or by corporations for that purpose. The annual income from the lands rented for the support of common schools, according to the returns of 1875, which were obtained as the result of much correspondence with town superintendents and town clerks and are probably correct, is $15,165.29.—(State report for 1875 and 1876, pp. 40, 41.)

CITY SCHOOL SYSTEMS.

BURLINGTON.

Officers.— A board of school commissioners of 5 members, 1 from each ward, with the city superintendent, who is president.

Statistics.—Estimated population, 15,000; children of school age, (5-20 years,) 3,207; enrolled in public schools in winter term, 898; average daily attendance, 727; in spring term, 862, average daily attendance, 758; in fall term, 1,002, average daily attendance, 820. In private schools there was an estimated average attendance of 1,045 pupils, making a total enrolment of about 2,500 children, and an average daily attendance of 1,870 in public and private schools, leaving 707 children apparently not attending any school. Teachers, 30; salaries of these, $180 to $2,000; salary of superintendent, $1,000. Receipts for public schools, $20,001.46; expenditures, $20,502.90. Value of school property, $87,775.

Remarks.— The public schools of the city embrace primary, mixed, intermediate, grammar, and high. They are not yet perfectly graded, and the importance of regular attendance is not properly appreciated, but progress is being made as rapidly as can be expected. Methods of instruction have been greatly improved. The buildings are commodious enough to accommodate 40 per cent. more pupils than at present attend. The teachers are the best that fair salaries can secure, and men of wealth, instead of opposing the public schools as formerly, give them their cordial support. The high school is in excellent condition. Music is successfully taught in all the schools.—(Return to Bureau of Education and Burlington report, 1875–'76, Charles J. Alger, superintendent.)

RUTLAND.

Officers.— A board of school trustees of 9 members, including the president and secretary.

Statistics.— Population, 7,000; children of school age, (5-20 years,) 1,513; enrolled in public schools, excluding duplicate enrolments, 675; estimated enrolment in private and parochial schools, 300; average attendance not given. Teachers in public schools, 20; pay of these, $362 to $1,800. Receipts for public schools, $9,400; expenditures, $10,873.50. Estimated value of school property, $25,000.

Remarks.—The schools are graded into primary, secondary, intermediate, grammar, and high. The high school provides two courses, English and classical. There were engaged in classical studies, 44 pupils; in French, 19; in German, 6.—(Report of Rutland graded schools, 1875–'76, and return to Bureau of Education.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

The State superintendent reports that the three normal schools have gone quietly forward with their accustomed work and have accomplished as much as, with their facilities, could have been expected. The faithful labor performed in them has been rewarded with increased confidence and patronage; and while some of the graduates

have entirely failed in their attempts to teach and govern the schools, continually increasing numbers of them are found in important positions. It is noticed that in those towns where normal graduates have been employed as teachers for the longest time and in the largest numbers both the school officers and the people are most desirous to secure the same or other normal graduates.

The normal school in the first district has suffered from a too frequent change of teachers, and from the attempt to carry on two schools with means not more than sufficient to sustain one. The latter evil has now disappeared, the trustees having decided to dispense with the Castleton Seminary and to use all their resources for the maintenance and development of the normal school.

The trustees of the normal school in the second district have within two years secured a small endowment fund, enlarged their school building, and added a model school. They look confidently forward to a prosperous future.

In the third district the trustees of the normal school have diminished and nearly extinguished the debt of the corporation, while at the same time the school has increased in numbers, and has secured in a larger degree the confidence of the community around it.

The whole number of graduates from the three schools for the two years 1875 and 1876 is 188, of whom 154 were from the first course and 34 from the second. In the Randolph School the aggregate attendance was 449 in 1875; in 1876 it was 579. Of the latter aggregate, 68 were connected with the model school. The total number of graduates at this school since its commencement is 408, of whom 132 were men and 276 women. The attendance at the Johnson School in 1875 was 46; during the spring and summer terms of 1876 it was 52. The total number of graduates from the commencement of the school was 161. At the Castleton School the number of different pupils present in 1875 was 66; average attendance, 49. In 1876 the number of different pupils was 62; average attendance, 37. Number of graduates since organization, 114.

The annual appropriation to these schools is $1,500 to each, of which $500 are to be expended in aiding the schools and $1,000 in assisting pupils attending. The $500 have in each normal school been applied to the payment of teachers' salaries. The $1,000 have been used, wholly or in part, for scholarships.—(State report for 1875 and 1876, pp. 10–12, 63–90.)

TEACHERS' INSTITUTES.

These have been held in 13 counties of the State, the total enrolment of teachers being 761, which number is estimated as about one-third of the attendance. It was the aim of the State superintendent in these meetings to show what the school system of the State really is; what instruction it provides for and requires to be given; to offer suggestions relative to the same and to the government and organization of schools; and to awaken an increased interest in education among the people. In this endeavor he was heartily and ably seconded by those assisting him.

In addition to the institutes, several educational meetings were held for a day and an evening, the work of which was similar to that of the institutes. It is the opinion of the superintendent that such a modification of the law as would authorize him to hold two or three similar meetings each year in the counties not calling for an institute would serve to promote the cause of education.—(State report for 1875 and 1876, pp. 4–7.)

SECONDARY INSTRUCTION.

PUBLIC HIGH OR GRADED SCHOOLS.

The State superintendent gives a table embracing statistics of 33 graded schools which reported to him. Several others, he remarks, entitled to a place in that table do not report to him. Of those reporting, 9 have, during the school year 1875–76, graduated students from their college preparatory course, the total number of graduates being 37; 20 report students in preparation for college; 28 report that Latin is taught, and 29 that the higher English branches are taught. In 28 of these schools the student is prepared to enter the best scientific schools, and in 25 to enter college.—(State report for 1875 and 1876, p. 25.)

PRIVATE SECONDARY SCHOOLS.

In 3 schools for boys, 4 for girls, and 21 for both sexes, outside of the public school system, there have been reported to this Bureau 2,849 pupils, under 114 teachers. Of these, 644 are in classical studies, 334 in modern languages, 278 preparing for a classical course in college, and 28 for a scientific course. Mechanical drawing is taught in 10, and free hand in 13, of these schools; vocal music in 19, and instrumental music in 25. Chemical laboratories are reported by 17; philosophical apparatus by 17; libraries of 50 to 3,160 volumes by 18, the aggregate number being 13,471.

PREPARATORY SCHOOL.

Burr and Burton Seminary, Manchester, reports 71 pupils engaged in studies preparatory for college, of whom 60 are preparing for a classical and 11 for a scientific course. Ten of its pupils entered college and five entered scientific schools at the close of the academic year 1874–'75. The school has apparatus for the illustration of chemistry and natural philosophy, and a library of 1,000 volumes.—(Return, 1875–'76.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF VERMONT.

This university, located at Burlington, comprises in its curriculum a department of arts, embracing the usual academical course in languages, mathematics, physical sciences, philosophy, rhetoric, literature, and history; a department of applied science; and the department of medicine. Students may elect their courses, but beyond this options are not allowed to those who may be candidates for a degree except that, to a limited extent, equivalent substitutions may be made by express permission of the faculty. Both sexes are admitted.—(Catalogue of university, 1875–'76.)

OTHER COLLEGES.

Middlebury College, Middlebury, (Congregational,) has the usual academic course of 4 years. During the winter and spring terms of the junior year prominence is given to the study of German. A permanent fund for the enlargement of the library has been established by recent action of the corporation.—(Catalogue, 1876–'77.)

Norwich University, Northfield, (Protestant Episcopal,) has a classical and scientific course, each of 4 years, and a special course in philosophy of 3 years, meant to meet the wants of those who wish to enter the profession of medicine or of law.—(Catalogue, 1874–'75.)

COLLEGE FOR WOMEN.

The Vermont Methodist Seminary and Female College, at Montpelier, reports 10 teachers and 99 students, of whom 58 were in regular and 41 in partial courses. The course of instruction covers 4 years, and includes vocal and instrumental music, drawing, painting, French, and German. The institution has apparatus for the illustration of chemistry and natural philosophy, a gymnasium, and a library of 775 volumes.—(Return, 1875–'76.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Agricultural and Scientific Department of the University of Vermont embraces a course in agriculture and related branches, one in theoretical and applied chemistry, one in civil engineering, and one in metallurgy and mining engineering. In addition to these, a literary-scientific course has been arranged which coincides substantially with the regular academic course save that Greek is omitted and its place supplied by substitutions from the department of science. These courses cover a period of 4 years, and lead to the degrees of B. P., C. E., and M. E. Annual charge to each student for

tuition, $45. Number of free scholarships, 15. Both sexes are admitted.—(Catalogue of university, 1875–'76, and special return.)

In the *Scientific Department of Norwich University* there is a course of 4 years, leading to the degree of B. S. The course includes, besides mathematics and higher English studies, Latin and German.—(Catalogue, 1874–'75.)

MEDICINE.

The Medical Department of the University of Vermont requires for graduation 3 years, study of medicine with a regular practitioner, and 2 full courses of lectures in some medical school recognized by the American Medical Association, the last course in this institution.—(University catalogue, 1875–'76.)

SPECIAL INSTRUCTION.

VERMONT REFORM SCHOOL.

This school, established in 1865 and located at Vergennes, reports, for 1875–'76, 138 inmates, of whom 125 were boys and 13 girls. Of the whole number, 133 were white and 5 colored, 102 foreign and 36 native born. The age of commitment is between 10 and 12. The studies taught are reading, writing, spelling, arithmetic, geometry, and geography. The employments are caning chairs, shoemaking, farming, and housework.—(Return, 1876.)

EDUCATION OF DEAF MUTES AND THE BLIND.

Having no institution of her own for the instruction of these classes of pupils, Vermont provides for the training of such as need her care in the institutions of other States.

EDUCATIONAL CONVENTION.

STATE TEACHERS' ASSOCIATION.

A notice of the meeting of this association, February 3, 1876, was included in the report of the Commissioner of Education for 1875, page 419. No information of any other meeting for that year is in hand.

OBITUARY RECORD.

HON. JOHN S. ADAMS.

The New-England Journal of Education for May 13, 1876, contained the following notice of this gentleman, said to be from the pen of President Buckham, of the University of Vermont:

"Died, in Florida, of consumption, John Sullivan Adams, for many years secretary of the board of education of Vermont. Mr. Adams was a remarkable man. He inherited strong qualities from his father, a rough courage, impetuous zeal, deep loves and hatreds. He was a ready and apt speaker, could gather and interest larger audiences than any man of his time in Vermont, and was capable, on occasion, of a real eloquence which few public men can approach. He knew the people of Vermont thoroughly—knew how to manage them for their own good. He could argue, flatter, scold, ridicule, according as the needs were, and rarely failed to make his hearers see as he saw, feel as he felt. On the organization of the board of education, in 1856, Mr. Adams was appointed secretary; he threw himself into the pioneer work which was then most needed, and for which he was admirably fitted, with all the ardor of an enthusiast. In this work he labored eleven years, with the greatest energy and the most useful results to the school system of Vermont. The State owes to few of the public men who have devoted themselves to her highest interests a greater debt of gratitude than to Mr. Adams. The city of Burlington, which was his residence for most of his life, has named one of its public schools after him."

CHIEF SCHOOL OFFICIAL.

Hon. EDWARD CONANT, *State superintendent of education, Randolph.*

VIRGINIA.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Virginia from 1796; Shepherd's Statutes at Large, vol. 2, pp. 3–5; Tate's Digest, 1841, pp. 659–676; Code of Virginia, 1849, pp. 371–381; 1860, pp. 413–429; 1873, pp. 92, 93, 678–704; Reports of Hon. W. H. Ruffner, from 1871 to 1876; Barnard's Common Schools and Public Education; Census Returns.

FIRST GENERAL SCHOOL LAW.

The early settlers in Virginia brought with them from England no such ideas with respect to public education as the Pilgrims of the Mayflower had imbibed in Leyden; and as the climate and the soil of the more southern State led to a broader and quite different style of agriculture, the dispersion of the people over large plantations made any education, save in family schools, quite difficult for long years, outside of Jamestown. The settlers thus became accustomed, far too soon, to the habit of training their children in their homes by private tutors and of leaving those of their overseers and poor white laborers to grow up as illiterate and uncared for serfs; this, too, while schools for Indians were thought of, and various efforts made to bring these woodland savages under some literary and Christian culture.

It was not until 1779, a hundred and seventy-two years after the settlement of Jamestown, that a bill to provide education for this long neglected class, as well as others, was introduced into the general assembly. It had been framed by Wythe and Jefferson, and was backed by their great influence, but it failed to pass; partly, perhaps, because of the then threatening aspect of the war, and partly from a cause which Jefferson himself explains.* The idea, however, was not abandoned by its originators, and on December 22, 1796, when the country had become quiet, and prosperity had returned after the war, the main features of the former bill were passed, and on January 1, 1797, became law. This "act to establish public schools" provided (1) that in every county there should be chosen annually, at the regular State election, by the electors qualified to vote for delegates, three of the most honest and able men of the county, to be called aldermen; (2) that said aldermen, on the second Monday of May, should meet at the court house of their county and consider the expediency of carrying the provisions of the act into execution; (3) that if it seemed expedient to do so, they should proceed to divide their county into sections of convenient size for school districts, and on the first Monday of September following were to have the householders in these sections assembled by previous notice at a fixed place to determine the most

* Writing to Dr. Priestley, January 27, 1800, Mr. Jefferson thus sketched his plan and its failure: "About twenty years ago I drew a bill for our legislature which proposed to lay off every county into hundreds or townships of five or six miles square. In the centre of each of them was to be a free English school. The whole State was to be laid off into ten districts, in each of which was to be a college for teaching the languages, geography, surveying, and other useful things of that grade; and then a single university for the sciences. It was received with enthusiasm, but, as I had proposed that William and Mary, under an improved form, should be the university, and as that was at that time pretty highly Episcopal, the dissenters after a while began to apprehend some secret design of a preference for that sect. About three years ago they enacted that part of my bill which related to English schools, except that, instead of obliging, they left it optional in the court of every county to carry it into execution or not."

favorable location for a school-house; (4) that, on this determination being reached, the aldermen were to forthwith proceed to have a school-house built, and subsequently to see that it was kept in repair; (5) that "at every of these schools" should be taught reading, writing, and common arithmetic, and that all the free children, male and female, resident within the respective sections should be entitled to receive tuition gratis for the term of three years, and as much longer at their private expense as their parents, guardians, and friends should think proper; (6) that the aldermen should from time to time appoint a teacher to each school, and remove him as they should see cause; (7) that they, or some one of them, should visit every school once in six months at least, examine the scholars, and superintend the conduct of the teacher in everything relating to his school; (8) that the salary of the teacher, with the expense of building and repairing a school-house, should be defrayed by a tax on the inhabitants of the county, to be collected by the sheriff as other taxes were, and to be paid to the aldermen at the time appointed for the payment of county levies by the sheriff.

The mayor, aldermen, and common council of the several boroughs and corporations within the State were to have power to adopt and carry into effect in their respective corporations the principles and provisions of this act, as to them should seem expedient, distinct from the counties in which they were comprehended.

The force of this act—in general most excellent and wise for that day—was greatly weakened, not only by leaving it to the aldermen to determine whether a school organization for their counties should be undertaken, but also by a concluding proviso which left it to the court of each county to determine in what year the first election of aldermen should be made, and said that until the courts had so determined no such election should be held.

How far the discretion thus allowed was exercised, or what number of schools was put in operation under the act, does not appear from any documents accessible; but, whatever may have been effected, this first law, so generally good in its provisions, was before very long replaced by a more objectionable

SECOND LAW.

A literary fund, intended, like the school funds of other sections, to aid education in the State, was created February 2, 1810, and to it were given all escheats, fines, forfeitures, and derelict rights in property. The charge of this fund was put into the hands of a board of trustees or directors composed of the governor and two chief officers of the State; in 1816 they were called on by the legislature to present a report on a system of education for the State. A bill kindred in most points to the preceding law, but without its weakening discretionary features, was presented, and passed the assembly February 21, 1818, becoming a law March 1. This law provided that in counties, cities, and towns represented in the legislature, and in the borough of Norfolk, the courts should appoint from 5 to 15 discreet persons to serve as school commissioners for a year, or till their successors should meet and organize. These commissioners were to meet at the court house, the first day of the first session of the court after their appointment, to choose a clerk and treasurer for their body, the former to keep record of proceedings, the latter to hold and disburse the quota of the literary fund assigned to the commissioners. This quota being for a school or schools in the county, town, or city, they were to determine among themselves how many poor children they would educate and what sum should be paid for the education of them. Then, each commissioner having power to select a certain number of such children, these were, with the consent of their parents or guardians, to be sent to the most convenient school, to be taught reading, writing, and arithmetic.

There were changes in the law made subsequently, at one time, February 24, 1821, allowing colleges, academies, and intermediate schools to share the benefits of the literary fund by having poor scholars paid for from it after primary schools had been provided for; at another, February 25, 1829, providing for the defrayment from this fund of two-fifths of the expense of building a school-house in any commissioner's district where the inhabitants should become responsible for the remaining three-fifths, as also for employing only teachers that had been examined and approved; but whatever changes were enacted up to 1846, these prime points of objection still remained: (1) The law did not constitute a public school system, sustained by general taxation and wholly under county and State control, but only one for utilizing private schools as means for educating public pupils; (2) that instead of opening a free education to all the free children of the State, as did the former one, it only opened it to "indigent children," who, as unable to pay their own way through the schools, were to have it paid for them as a State charity. A sense of self-respect was thus crushed out of the recipients of the benefit, a distinction of "poor scholar" and "pay scholar" was introduced, and few children could well brave the former designation.

Of the whole school system under this law, Governor McDowell, in his message to the legislature, January, 1843, said that after having existed for thirty years it gave

only 60 days' tuition to one-half the "indigent" children of the State as its grand result; and that it was, therefore, little more than a costly and delusive nullity which ought to be abolished, and another and better system established in its place.

THIRD LAW.

March 5, 1846, there was, in connection with an amendment of the "poor school system," a law passed to establish a "district public system." This provided, like the amended former law, for boards of school commissioners, to be appointed by the county courts, who should lay off the county into school districts of convenient size, each of which districts should be under the charge of 3 trustees, serving for one year terms, 2 of them chosen by the people and 1 by the commissioners. But, unlike the last law, it went on to enact that "in each district a school shall be established in which shall be thoroughly taught reading, writing, and arithmetic, and (where it is practicable) English grammar, geography, history, (especially of the State of Virginia and of the United States,) and the elements of physical science, and such other and higher branches as the school commissioners may direct; and all the white children, male and female, above the age of 6 years, resident within the respective districts, shall be entitled to receive tuition at said schools free of charge." Provision was also made for the purchase of school sites, for the erection and furnishing of buildings, for the appointment of examined teachers, and for keeping of registers and making of returns by them, with visitation and examination of the schools by both the commissioners and trustees; while for meeting all expenses additional to what might be defrayed from each county's quota of the literary fund, there was to be a uniform rate of increased taxation on all existing subjects of the revenue tax and county levy.

This was a vast improvement, and had it been made mandatory upon every county and only optional with cities and incorporated towns, it might have changed immensely the educational condition of the old State. But unfortunately, as with the law of 1796, it was left optional with counties to adopt it or reject it, and the result was a failure to secure any State system, as before. The census of 1850 showed, three years after the enactment of the law, only 67,438 pupils, in 2,937 public schools, (so called, though many were but private schools in which some public fund pupils were instructed.) And that the greater part of these were not free scholars is evident from the fact that more than half the income of the schools was from other sources than endowments, taxes, and public funds. It was not greatly better in 1860, when the returns of the census reported 3,778 schools, with 85,443 pupils; for though the income from taxation and from public funds was larger than before, that from other sources was now more than three-fifths of the whole, so that probably not more than two-fifths of the pupils, or 34,176, were at public charge.

FINALLY A STATE SYSTEM.

When, after the civil war of 1861-'65, Virginia came again into the Union, her amended constitution of 1870 provided for a uniform system of public free schools, and for its gradual, equal, and full introduction into all the counties of the State by the year 1876, or as much earlier as practicable. In this system normal schools were to have a place and agricultural and graded schools were authorized. For supervision of the whole, there was to be a superintendent of public instruction elected by joint ballot of the general assembly within thirty days after its organization under this constitution and every fourth year thereafter, with a board of education, to be composed of the governor, superintendent of public instruction, and attorney general. There was also provision for county superintendents and district trustees of schools, for aid from the literary fund and from State taxes for the whole system, and for supplementing this aid through county and district taxation not to exceed 5 mills on the dollar.

In accordance with these constitutional provisions, an excellent school law was approved July 11, 1870, and under it the system was at once inaugurated by Hon. W. H. Ruffner, appointed in March preceding State superintendent of public instruction, with the aid of the other members of the State board. It met, in general, a cordial welcome, as better than any one possessed before, and has gone on increasing in efficiency and favor from the outset until now. Dr. Ruffner's first report, for the year ended August 31, 1871, showed an enrolment in public schools of 130,496 pupils, and in all schools of 157,841—an immense advance on any previous year. In 1873 the enrolment in public schools had reached 160,859, and in 1876 was reported to be 199,856. The schools, too, are now open and free to every person of school age residing in the districts where they are maintained, although, as in the other Southern States, a still strong public sentiment requires the instruction of colored and white pupils in separate schools. Dr. Ruffner continues to administer the system as State superintendent.

No normal school has yet been established by the State, but things are tending toward one, and the instruction of teachers for the colored population is indirectly furthered by the State, through its giving to the Hampton Institute, where many such teachers are in training, a portion of the revenue from the agricultural college fund.

There is a State institution for the instruction of deaf-mutes and blind, at Staunton,

founded in 1839, and a State Agricultural and Mechanical College, at Blacksburg, founded in 1872, besides an agricultural department in the Hampton Institute, near Norfolk, which dates from the same period. The University of Virginia, near Charlottesville, (a successor to the Central College of Albemarle,) chartered in 1819 and organized in 1825, is not strictly a State university, though always favored and fostered by the State.

ELEMENTARY INSTRUCTION.

THE PUBLIC SCHOOLS.

Primary education has entered a higher sphere in Virginia. This is generally admitted with respect to the schools in many of the larger towns and cities. Teaching in these schools is a science reduced to successful practice. But while this cannot be denied, objectors pronounce the country schools a failure. "If they are a failure," says the superintendent, "how are we to account for the fact that they are increasing in number and in popularity and that competition is dying out, especially in the rural districts?" He thinks that if the Virginia legislature, like the English department of education, were to order a universal competitive examination of all the primary schools of the State, public, private, and denominational, the result would be, as it was in England, to stop adverse criticism of the public schools.

As will be seen from the summary, the gain in enrolment for 1875–'76 was 15,370. In 1874–'75 it was 10,611 over the previous year, making in two years a gain of nearly 26,000. There are now almost 200,000 children in the public schools, which, with those attending private schools, shows an educational progress that augurs favorably for the future development of the State. Besides the gain in enrolment, there was an improvement of 2 to 3 per cent. in regularity of attendance. The cost of instruction was 69 cents a month for each pupil enrolled, against 70 cents last year, a fact, however, which does not imply a reduction in the pay of teachers, for this has somewhat increased. The colored pupils, though not yet equal, have gained, relatively, on the whites in enrolment, and also in average attendance. About one-third of the school-houses used are now owned by the districts. The school funds, it is believed, have been honestly, economically, and, in most cases, judiciously administered.—(State report for 1875–'76, pp. 9–12.)

TEACHERS.

Increased attention has been given to the improvement of teachers as well as of school appliances. Public misfortunes have enabled the school system to command the services as teachers of large numbers of cultivated men and women such as in former times were rarely found in this occupation. In the beginning of the school system, nearly all the primary teachers then acting applied to the school authorities for license to teach in the public schools, and while all who were qualified were gladly received, a large portion, and some of them old teachers, were rejected on account of incompetency or bad character. The selected teachers have from that time up to the present been under training, and it is believed that in every county where there has been a zealous superintendent the style of teaching has advanced year by year.—(State report, 1875–'76, p. 16.)

PRESENT STATUS OF PUBLIC SCHOOLS.

The school system was never so prosperous, so well managed, or so strong in public favor as at present, notwithstanding that during the year covered by the report an organized movement was made for its overthrow. Writers of ability attacked it virulently and an attempt was made to assemble a convention of opponents. The State superintendent, under the authority of the law which imposes upon him the "general supervision of the public free school interests of the State," entered freely into the discussion, circulating a large number of educational tracts. He expresses the belief that while a small class of worthy opponents have been led by the debate to be more open and decided in their opposition to the school system than before, far more has been gained than lost by the discussion.—(State report, 1875–'76, p. 25.)

CITY SCHOOL SYSTEMS.

ALEXANDRIA.

Officers.— The school board is composed of 3 members from each ward, 1 of whom goes out of office each year, a president being chosen from the members of the board and a clerk from other citizens. A superintendent of schools for the city and county is appointed by the State board.

Statistics.— Estimated population of the city, 16,000; school population 5 to 21 years of age, 4,447. Enrolment in public schools, 1,137; estimated enrolment in private and parochial schools, 725. Average daily attendance in public schools, 774. Average number of teachers in public schools, 18; in private and parochial schools corresponding with public schools in scope, 36. Annual salaries of teachers in public schools, $150 to

$900. Receipts for public school purposes, $12,915.54; expenditures, $11,514.09.—(Return to Bureau of Education, 1876, and printed report.)

Remarks.—In the last report of this Bureau (for 1875) there occurred this paragraph respecting Alexandria: "The parish schools connected with two Protestant Episcopal churches in the city are said by the superintendent to have rendered much service to the cause of free education during the year, proportionally lessening the burdens of the taxpayers." It appears from later information that this statement was partly erroneous, one only of these schools being Protestant Episcopal, the other Roman Catholic.

LYNCHBURG.

Officers.—The school board is composed of 9 members, 3 for each ward, one-third going out each year, and a superintendent of city schools, who is also clerk of the board.

Statistics.—Estimated present population of the city, 14,000; number of school population, (5–21 years of age,) 4,093. Enrolment in public schools: white children, 874; colored, 451; total, 1,325. Average daily attendance, 781; per cent. of attendance of white children, 82; of colored children, 77. Per cent. of school population enrolled, (white, 44, colored, 21,) 32. Number of teachers, 25. Cost of public education for the year, $16,922.52.

Remarks.—The schools are graded as primary, grammar, and high, the latter having an enrolment for the year of 115, (75 girls and 40 boys,) with an average daily attendance of 84. There is a normal class connected with it, which supplies teachers for the lower schools. A noticeable improvement in the character of the instruction given in the schools and in the discipline for 1875–'76 is claimed, as also a decided improvement in the teachers. Their average experience in the public school system is now 3.6 years.—(Report, 1875–'76, of City Superintendent A. F. Biggers.)

NORFOLK.

Organization.—The school board is composed of 6 members, 3 from each school district of the city, who hold office for three years, one-third going out of office each year. There is a city superintendent of schools.

Statistics.—Estimated population of the city, 25,000; school population, (5–21 years of age,) 6,244. Enrolment in public schools, 1,344; in private and parochial schools, 1,052. Average daily attendance, 915. Teachers in public schools, 24; in private and parochial schools, 47. Annual salaries of teachers from $500 to $1,000. Receipts for public school purposes, $22,603; expenditures, $19,412.08.—(Report for 1874–'75, and return for 187 5–'76.)

RICHMOND.

Officers.—A school board composed of 9 members, 3 from each district into which the city is divided, has general control of the city schools. The board elects from among its members a secretary and supervisor of school property, while from without a superintendent of city schools is appointed by the State board of education. The mayor of the city is ex officio president. One-third of the elected members of the board are changed each year.

Statistics.—Estimated population of the city, 73,000; youth of legal school age, (5–21 years,) 20,754. Enrolment in public schools, 5,239; in private and parochial schools, 3,825. Average daily attendance in public schools, 4,410. Number of teachers in public schools, 125. Salaries of teachers range from $180 to $1,350 per annum. Receipts for public school purposes, $76,658.15; expenditures, $76,668.15.—(Return for 1875–'76.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent says there were never before so many scholars pursuing the higher branches in Virginia as during the year covered by his last report. There were in operation during that year 161 graded public schools, an increase of 6 over the previous year, and 7,382 students in public schools pursuing the higher branches of knowledge, an increase of 588.—(State report, 1875–'76, p. 17.)

PRIVATE SECONDARY SCHOOLS.

In 11 schools for boys, 9 for girls, and 5 for both sexes, outside of the public school system, there have been reported to this Bureau 1,422 pupils under 104 teachers. Of these, 434 are in classical studies, 291 in modern languages, 143 preparing for a classical course in college, and 65 for a scientific course. Mechanical drawing is taught in 5 of these schools, free hand in 7, vocal music in 12, and instrumental music in 13. Chemical laboratories are reported by 2, philosophical apparatus by 7, and libraries of 50 to 500 volumes by 9, the aggregate of volumes comprised being 11,000.—(Special reports, 1875–'76.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Four preparatory schools and 3 departments report for 1875–'76 a total of 16 teachers and 301 pupils, of whom 173 were preparing for classical and 21 for scientific courses. Of the preparatory schools, 3 have apparatus for the illustration of chemistry and 2 for natural philosophy. All have gymnasiums, and 3 have libraries of from 400 to 2,500 volumes, aggregating 3,775.—(Special returns, 1875–'76.)

BUSINESS COLLEGE.

A business college at Richmond reports an attendance of 42 students. The common English branches, with correspondence, penmanship, and book-keeping, are taught. There is a library of 512 volumes.—(Special return, 1875–'76.)

SUPERIOR INSTRUCTION.

THE UNIVERSITY OF VIRGINIA.

This university is in Albemarle County, near Charlottesville, but it has its own post-office. It has no curriculum or prescribed course of study to be pursued by every student, whatever his previous preparation or special aims, but instruction is given in independent elective schools in all the chief branches of learning, while, at the same time, the courses of academic study are so arranged as to provide for the systematic prosecution of a complete plan of general education. There are now, in addition to the professional departments, 12 of these independent schools, viz: (1) Latin; (2) Greek; (3) modern languages; (4) philosophy; (5) history, general literature, and rhetoric; (6) mathematics; (7) natural philosophy; (8) mineralogy and geology; (9) general and applied chemistry; (10) applied mathematics and civil engineering; (11) analytical and agricultural chemistry; and (12) natural history, experimental and practical agriculture. The professional departments are those of medicine, law, and agriculture. No honorary degrees are conferred by the university.—(Catalogue of the university, 1875–'76.)

OTHER COLLEGES.

Emory and Henry College, Emory, (Methodist Episcopal South,) embraces collegiate and preparatory departments, and scientific and business courses.—(Catalogue of the college, 1874–'75.)

Randolph Macon College, Ashland, (Methodist Episcopal South,) embraces in its course of study 11 separate schools, viz: (1) Latin; (2) Greek; (3) English; (4) modern languages; (5) pure mathematics; (6) applied mathematics; (7) natural science; (8) chemistry; (9) physiology and hygiene; (10) moral philosophy and metaphysics; and (11) biblical literature and Oriental languages. The degrees conferred are: Graduate in a school; distinguished graduate; B. S.; B. A., and A. M.—(Catalogue of the college, 1875–'76.)

Richmond College, Richmond, (Baptist,) is composed of 8 independent schools, viz: Latin, Greek, modern languages, English, mathematics, physics, chemistry, and philosophy. The degrees conferred are B. L., B. S., B. A., and A. M.—(Catalogue, 1875–'76.)

Roanoke College, Salem, (Lutheran,) embraces preparatory, collegiate, and normal departments, which last is under the immediate supervision of the president.—(Catalogue, 1876–'77.)

Washington and Lee University, Lexington, (non-sectarian,) embraces in its organization three essential features: the arrangement of the course of study into distinct elective schools or departments; the adaptation of the several departments to certain courses of study, to each of which is attached a corresponding degree, and a system of honors and prizes for the encouragement of general scholarship as well as of distinguished proficiency in particular branches. There is a summer school organized to enable students to make up special deficiencies or to enter advanced classes at the beginning of the next session. The degrees of the college are, Ph. B., B. S., A. B., and A. M. The degree of Ph. D. is conferred on graduates after two years' special and successful study in certain prescribed lines.—(Catalogue, 1874–'75.)

COLLEGES FOR WOMEN.

Twelve institutions for the superior instruction of women report a total of 1,172 students and 108 teachers. Of the students, 189 were in preparatory departments, 483 in regular, 24 in partial, and 4 in post graduate courses. All teach vocal and instrumental music and drawing; 11, French and German; 10, painting; and 3, Italian and Spanish. Nine report apparatus for the illustration of chemistry and natural philosophy; 3, art galleries; and 1 a gymnasium. Seven report libraries aggregating 5,300 volumes.—(Special returns, 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

Hampton Normal and Agricultural Institute, Hampton, is an agricultural as well as a literary and normal school for colored students. The statistics of this institution embraced in the following table include only the agricultural department, which has 140 acres of land under cultivation, gives instruction in practical farming, and offers tuition and room rent free to 100 students from the free schools of Virginia. The whole number of teachers is 17, of whom 12 are females; whole number of students in academic department,* 211 for year 1876; course of study, 3 years, embracing all the ordinary studies of good schools, with Bible lessons and methods of teaching, as well as instruction in agriculture, horticulture, sewing, cooking, household work, and printing. Both sexes are admitted, but not under 14 or over 25 years.—(Catalogue for 1876.)

The Virginia Agricultural and Mechanical College, Blacksburg, was organized in 1872, receiving a part of the proceeds of the congressional grant for the benefit of agriculture and the mechanic arts. The course of instruction is strictly confined to what is believed to fit men best for success as farmers and mechanics. Greek is not taught, and Latin is not required, but students under 21 years of age must study either German or French. Daily instruction is given in practical agriculture and mechanics to sections of students working on the farm or in shops. The law provides free scholarships in this college for as many students as there are members in the house of delegates, such students to be selected, by school trustees in the different counties, with reference to the highest efficiency and good character.—(Catalogue and report of college, 1875–'76.)

The Virginia Military Institute, Lexington, was organized in 1839 as a State military and scientific school, upon the plan of the United States Military Academy at West Point. The State makes an annual appropriation to the institute of $15,000, which is expended in the support and instruction of the State cadets. Of these there were 50 in 1875–'76, while of pay cadets there were 500. The course of studies in the academic school comprises, in addition to scientific and higher English branches, Latin, French, and German. There is a special school of applied science, in which graduates of the academic course may prosecute the various professional studies embraced in the applications of science. This special school includes 7 courses, viz: architecture, civil engineering, machines, mining, metallurgy, analytical and applied chemistry, and agriculture.—(Official register, 1875–'76.)

New Market Polytechnic Institute, New Market, provides courses leading to the degrees of A. B., M. E., C. E., and practical chemist. Chemistry is taught thoroughly and

*This is exclusive of the Butler School, which is a free county school on the grounds of the institute serves as a preparatory school for it, and had on its roll 230 children in 1876, with a class of 31 on the normal school roll.—(Catalogue, p. 18.)

practically, with its application to agriculture, the arts, and the every-day affairs of life. Telegraphy is taught with first class instruments.—(Catalogue, 1875–'76.)

The University of Virginia provides scientific instruction in a school of mathematics and civil engineering, and one of analytical and agricultural chemistry, and in an agricultural department, the last having been established by funds contributed for the purpose by the late Samuel Miller, of Lynchburg.

Washington and Lee University also gives scientific instruction in the school of civil and mining engineering, which embraces all the studies usually pursued in mining engineering and civil engineering courses, and leads to the degrees of C. E. and M. E.

THEOLOGY.

Richmond Institute, Richmond, (Baptist,) is one of 7 institutions sustained by the American Baptist Home Mission Society for the education of teachers and preachers among the freedmen of the South.—(Catalogue, 1875–'76.)

Theological Seminary of the Diocese of Virginia, Fairfax County, (Protestant Episcopal,) requires that candidates for admission be either graduates from some college or university or that they pass examinations showing equivalent attainments. The full course of study lasts 3 years.—(Catalogue, 1875–'76.)

Union Theological Seminary, Hampden Sidney, (Presbyterian,) offers free tuition to members of any evangelical church who desire to study for the ministry and who have had a collegiate or equivalent scholastic training. Course of study, 3 years.—(Catalogue, 1875–'76.)

In *Randolph Macon College*, (Methodist Episcopal Church South,) there is instruction in biblical literature and Oriental languages for the benefit of students fitting for the ministry.—(Catalogue, 1875–'76.)

LAW.

The Law Department of the University of Virginia comprises a school of common and statute law and a school of equity, mercantile and international, constitutional and civil law, and government. The instruction is given by means of text books, lectures, and moot courts. The course, designed for two sessions, is sometimes completed in one, although students are advised as a general rule not to attempt this. If, however, the required standard in the graduating examination is attained, the student receives his degree, whatever be the length of time he has devoted to preparation.—(Catalogue of law department, 1875–'76.)

The School of Law and Equity of Washington and Lee University furnishes full instruction in the principles of the law of real and personal property, in equity jurisprudence, and in the forms and practice of the courts of law and equity. There are two classes, junior and senior, and in each class 6 recitations or lectures a week. Students who are well prepared may attend both classes each day, and thus complete the entire course in one year.—(Catalogue of university, 1874–'75.)

MEDICINE.

The Medical College of Virginia, at Richmond, has a course of instruction comprising lectures on anatomy, physiology, pathology, chemistry, and pharmacy, materia medica and therapeutics, practice of medicine, surgery, obstetrics, diseases of women and children, and medical jurisprudence. Two full courses of lectures and a year's previous study are required of candidates for the degree of M. D.—(Catalogue, 1875–'76.)

The Medical Department of the University of Virginia is organized on the same general plan as the other departments of the university, the distinctive features of which are comprehensiveness and thoroughness of instruction, and the graduation of the student only upon satisfactory evidence of attainments without regard to the length of time he may have been attending the lectures. The sessions last nine months, and many intelligent and diligent students graduate after having studied during one session.—(University catalogue, 1875–'76.)

SPECIAL INSTRUCTION.

VIRGINIA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, STAUNTON.

This institution has since its foundation, in 1839, given instruction to 446 deaf and dumb and 214 blind pupils. The number attending in 1875–'76 was 37 blind and 96 deaf and dumb. The branches taught the deaf mutes are all those embraced in a common school course. The employments in which the blind appear to be especially engaged are mattress making, broom making, cane seating, and worsted and bead work. The report also indicates tailoring, carpentering, printing, and book binding as carried on, probably by the deaf mute pupils. Value of grounds, buildings, and apparatus, $175,000. The State appropriation for 1875–'76 was $40,000, and was for both classes, the deaf and dumb and the blind.

Instruction in articulation, which was begun as an experiment, has proved so successful and has accomplished so much for many of the semi-mutes that it is now an established part of the course. The class in articulation has contained also 2 or 3 congenital mutes, but not one in fifty of such, it is believed, can derive benefit from this instruction.—(Annual report of the institution, 1875–'76, and special return, 1876.)

EDUCATIONAL CONVENTION.

VIRGINIA EDUCATIONAL ASSOCIATION.

The eleventh annual session of the Educational Association of Virginia was held at Richmond, July 5, 1876. Notwithstanding the small attendance, resulting from financial distress and hot weather, the meeting was an interesting and instructive one, and among those present were many of the best teachers in the State.

Dr. Ruffner opened the exercises with an interesting and striking paper on the necessity of teaching morals in the schools.

Governor Kemper followed, referring particularly in his remarks to the power which the educational association wields, and should wield, in all matters pertaining to the educational interests of the State. He looked upon the State association as a body of experts, the only body competent to advise the legislature and the executive as to the delicate and involved problems relating to education which now demand solution.

During the sessions papers were read and addresses delivered upon various subjects of importance, but that which aroused the greatest interest was a paper read by Prof. H. H. Harris upon the relations between the secondary school and the primary school and college. This paper elicited a long and earnest discussion, and led to the adoption by the association of a resolution reciting the importance of securing harmony and coöperation among the various educational forces of the State, and resolving that friends of learning in the State be requested to consider earnestly whether some plan cannot be devised through which this coöperation may be secured.—(Educational Journal of Virginia, August, 1876.)

OBITUARY RECORD.

CITY SUPERINTENDENT J. H. BINFORD.

A notice emanating from the State department of public instruction, published in the Educational Journal of Virginia, and dated at Richmond, August 21, 1876, says of this excellent gentleman:

"Our readers have no doubt heard of the great loss sustained by our school system in the death of Capt. James H. Binford, superintendent of the Richmond city schools. Mr. Binford was first elected by the city council in the fall of 1870, one year and a half after the council had put in operation a public free school system, with Andrew Washburne, of Massachusetts, as superintendent. In April, 1871, Mr. Binford received a commission from the State board of education, and at the same time the city schools became merged into the State system. For several years after his appointment, accompanied in one instance by the mayor and other trustees, he was sent North and West on tours of observation by the city school board; and distinguished educators were specially induced to visit Richmond and assist in the organization of the schools. To this wise and liberal policy Mr. Binford attributed much of his early success in managing the schools and in falling upon the best methods of teaching.

"But he was himself admirably adapted to his position. He had a clear, vigorous, cultivated mind, good practical sense, a talent for organization and control, firmness and decision, great quickness of perception, a ready tongue, and untiring industry. He was also genial and cheerful, and had great prudence and tact. Altogether, he was a remarkably able, faithful, and successful superintendent, and his death is universally regarded as a serious loss. He died at the Red Sulphur Springs of rheumatism of the heart, from which his health had been declining for two years."

At a meeting held in Richmond, October 7, 1876, Mr. W. F. Fox, principal of the city high school, said of Mr. Binford, whom he had known intimately: "The controlling principle of his life was the interest of the public schools. They seemed ever present to his mind; all else was subservient to them; health, private interests, pleasure, were all sacrificed to their advancement. He never went into any assembly, or into the company of any teachers, that he did not ask 'How can I use this for the benefit of my schools?' He never read a book or periodical that he did not, if possible, cull some thought from it which could be made advantageous to them."

It was this intense and conscientious devotion to his work which, with a clear head, a cool judgment, and a persevering determination to succeed, made him one of the most popular and useful superintendents in our country.

COUNTY SUPERINTENDENT JONATHAN LYONS.

The Educational Journal of Virginia for July, 1876, announcing the death of this gentleman, who had been long superintendent of the Tazewell County schools, says it occurred on the 11th instant, and goes on to tell that "Mr. Lyons was a most faithful and successful school officer, who left no part of his duty unperformed, so far as his strength would allow; who worked in the cause of popular education because he loved it, and hence reached the hearts of the people and commanded universal respect—a

man of clear, sound mind, fine character, and good scholarship, whose place it would be difficult to find a man worthy to occupy." Such men deserve a record, and may well have grateful place in human memory.

PRESIDENT BITTLE, OF ROANOKE COLLEGE.

Rev. David F. Bittle, D. D., was born November 19, 1811, in Frederick County, Maryland. His youth was spent in labor and study on his father's farm. In his nineteenth year he entered the preparatory department of Pennsylvania College, Gettysburg, and proceeded to graduation in 1835 among companions some of whom have since been eminent. After graduating he entered the theological seminary at Gettysburg and remained till 1837, when he married and entered on the pastoral charge of St. John's Lutheran Church, Augusta County, Virginia. Here amid active ministerial labor he made time for close and systematic study, and aided in the establishment of the Virginia Collegiate Institute, near Middlebrook, the germ of the subsequent Roanoke College, Salem. Eight years of faithful pastoral service in Virginia were followed by 7 more in a church at Middletown, Md., near his early home, and this by 2 years' travelling agency for the Lutheran Home Missionary Society and the Hagerstown Female Seminary. From this work he was called to the presidency of the institution he had helped to found, now grown into Roanoke College, accepted the position, and entered on its duties in August, 1853. Thenceforth his history was that of the college, known and read of all. He labored incessantly and most successfully to build up the yet infant institution and make it an educational power in the section it was meant to influence. And he had the pleasure of seeing it grow beneath his hands into an important and effective college, presided over by an able faculty, and gathering its students from about twenty States and Territories. His powers as a financial agent, as a college disciplinarian, as an interesting preacher, and as a genial scholar, contributed much to its success, and when he passed away, September 25, 1876, he left it, an influential and largely completed institution, as his monument.—(Roanoke Collegian, October, 1876, and letter from Professor T. C. Bittle.)

LIST OF SCHOOL OFFICIALS IN VIRGINIA.

Hon. W. H. RUFFNER, *State superintendent of public instruction, Richmond.*

STATE BOARD OF EDUCATION.

Name.	Term.	Post-office.
His excellency James L. Kemper, governor, president	January 1, 1874-'78	Richmond.
Hon. R. T. Daniel, attorney-general	January 1, 1874-'78	Richmond.
Hon. W. H. Ruffner, State superintendent of public instruction	March 15, 1874-'78	Richmond.

SUPERINTENDENTS OF COUNTIES AND CITIES.

[Term, 4 years from July 1, 1877.]*

County or city.	Superintendent.	Post-office.
Accomac	James C. Weaver	Onancock.
Albemarle	D. P. Powers	Scottsville.

(Report for 1875 and 1876 of Hon. B. H. Byrne, State superintendent of free schools, and special returns for 1875 and 1876.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Constitutions of 1863 and 1872; Laws of West Virginia from 1863; Barnard's Common Schools and Public Instruction; United States Statutes at Large, 1862; Reports of State Superintendents from 1869.

FORMATION OF A SYSTEM.

Up to 1861 the history of the eastern and western portions of Virginia was the same. They formed one State beneath one government, though differing greatly in physical characteristics, in origin of population, and in the forms of social life. But when the great wave of secession swept the region east of the mountains away from the Union and into the Confederacy of the South, the connection between the two sections of the State was broken. The people west of the Alleghanies, separated by mountain barriers from those east of them, and closely linked with Pennsylvania and Ohio, from which they had in many cases come, refused to be severed from the Government of the United States. Meeting in convention at Wheeling June 11, 1861, they resolved to form a provisional State government, to continue their connection with the Union, and to let their future course be shaped by circumstances as these might arise. Those circumstances drifted them eventually into the position of a separate State, Congress, on the 31st of December, 1862, passing an act to allow them to form one, and the President, by proclamation, on the 20th of April following, declaring that the thing was done.

Coming thus into a position for free action with respect to schools, the people, in their constitution of 1861, amended 1863, threw off the old poor school system of the parent State, provided for the formation of a fund to aid free schools, and directed the legislature to provide as soon as practicable a thorough and efficient system of such schools, to be sustained partly by the revenue from the school fund, partly from forfeitures and fines, partly from general State taxation, and partly from local tax. Legal provision for the supervision of these schools by elected State and county superintendents and township officers was also authorized, as well as the organization of such institutions of learning as the best interests of general education in the State might demand.

In accordance with these constitutional provisions a State school system was instituted under a law passed December 10, 1863, and amended February 25, 1865, and February 26, 1866. This system embraced the officers before mentioned, with township boards of education, and, after 1866, district trustees appointed by these boards. There was also a State board for care of the school fund. The earlier reports of the working of the system are not at hand, but the one for 1869 showed the existence of 2,198 schools and 2,283 teachers, with 36,684 pupils in attendance out of a total enrolment of 59,028 youths of school age, (6-21.) Seven of the schools were high schools and 38 were graded schools. The school year was, as a rule, 4 months. The receipts for school purposes during the year had been $281,058, besides $258,386 for building, making a total of $539,444; about ten times as much as the old State had been accustomed to expend annually for the tuition of poor children throughout her undivided territory. A State normal school had been established in connection with Marshall College and had had 106 pupils during the year, while a branch school at Fairmount had had 30 students in its normal department. Things were thus in quite fair working order for the beginning of a new system in a new State.

Three years later, 1872, the State report showed that out of a school population of 170,035 there had been 85,765 enrolled in 2,479 public schools, with an average attendance of 56,317. A second branch of the State normal school had been established, a third was organized, and two others had received legislative authority to organize, while a State university, with 53 State cadets attendant on its classes, was said to be doing good work. Nor had special instruction been neglected; an institution for the training of deaf-mute and blind pupils in useful learning and productive means of self support had been established in 1870 at Romney, and reported in this year 67 in its halls.

MODIFICATIONS OF THE SYSTEM.

An amended constitution having been adopted in 1872, providing for some slight changes in the school system, a law conforming to its requirements was passed April 12, 1873; this law continues to be, in its main features, the school law of the State. The law retained the State and county superintendency of free schools, with the township boards of education, but as embarrassments had grown out of having 3 trustees in the districts into which townships had been divided, only 1 trustee for these was now allowed, and he to be elected by the people of the district instead of being appointed by the township board. The township, too, was now again made the one school district, as it had originally been under the laws of 1863 and 1865, and former

districts were made subdistricts. Separate instruction of white and colored pupils was required, but to afford to colored children, as far as practicable, the benefit of free school education, schools were to be established for them in every subdistrict in which were 25 colored youth of school age. And as complaints of partial and incomplete examinations by county superintendents had been sometimes made, the exclusive examination of teachers was taken out of their hands and given to a county board of examiners, in which two experienced teachers, to be appointed by the presidents of the district boards of education, were associated with the superintendent.

Under this law the school system seems to have been worked successfully, the enrolment in 3,341 public schools reaching 123,504 pupils in 1876, though the average attendance for that year was somewhat less than in the year preceding. The income, too, had come up to $860,644, while $793,272 had been expended on the public schools. The average school terms had been considerably increased, and greater efficiency in the instruction in the schools was reported to have been secured, while the State university, State agricultural department of the same, and State school for the deaf and dumb and the blind are all spoken of as flourishing.

At only two points does there seem to have been an exception to this reported general advance. The number of high schools and of graded schools appears to have diminished, while the efficiency of the State normal school and its 5 branches is said to have been impaired by slow and apparently reluctant appropriations for them by the legislature.

SUPERINTENDENTS.

The general superintendents have been: W. R. White, 1864–'65; A. D. Williams, 1865–'69; Henry A. G. Ziegler, 1869–'70, then dying in the midst of his term; C. S. Lewis, 1870–'72; W. K. Pendleton, 1872–'73, filling a vacancy made by Mr. Lewis's resignation; B. W. Byrne, 1873–'77. W. K. Pendleton was elected in the autumn of 1876 to succeed Mr. Byrne at the expiration of his term, March, 1877.

ELEMENTARY INSTRUCTION.

PROGRESS.

The State superintendent, in his biennial report for the years 1875 and 1876, notes a marked progress in all the departments of the free school system. Since the commencement of his term of office, four years ago, he finds that the teachers are much better qualified, the attendance at school has been much larger, and the number of schools taught and the length of term have considerably increased. Much greater efficiency has been observed in the discharge of their duties by the school officers generally, and particularly by county superintendents. The finances of the schools have been disbursed more efficiently and accounted for much more closely.—(State report for 1875 and 1876, p. 26.)

SCHOOL FINANCES.

The school taxes have from the beginning of the system been about the same as at present, though the levy for the building fund has been for the last few years about one-third less than formerly. But the State levy has from the commencement been 10 cents on the $100 valuation of all property, real and personal, and the local tax for teachers' fund has not varied much from the beginning; yet the discrepancy in the amount raised has been great in different periods of the existence of schools, there having been received during the last 3 years $717,749 more than during the 3 years previous to that period. True, there has been considerable increase in the value of property subject to taxation during the last 3 years, but not a sufficient increase, in the opinion of the superintendent, to account for the difference in amount raised. The whole financial system of the State relating to schools, says the State superintendent, is radically wrong; it should be reorganized, and placed on the same basis as is the State financial system, both as to State and local levies and collections.

As an example of the looseness with which the school finances are managed, it is stated that numerous complaints are made by many of the counties that the sheriffs fail to pay to the teachers, as it becomes due, the money that is placed in their hands semi-annually for that purpose, using it for speculation and for the payment of their own debts. If the sheriff of a county is in debt to the State on account of revenues due to the State, when the general school fund becomes due the auditor withholds the payment of the school money until such indebtedness is discharged. Thus, if the sheriff is indebted to the State when he gets his orders from the county superintendent, he takes the money due to the school teachers and pays his own debts, forcing them to wait for their money until the sheriff can collect from the slow taxpayers of his county sufficient to replace the teachers' money; thus making the school fund, as now managed, a reserve fund of actual cash in bank, upon which the sheriff can draw to pay any deficit in his accounts with the State that does not exceed the amount due to his county from the general school fund. The superintendent urges upon the legislature the importance of amending the law so as to make such practices impossible.—(Report of State superintendent for 1875 and 1876, pp. 14-19.)

EDUCATION AT THE CENTENNIAL.

West Virginia's exhibition of school work at the Centennial was creditable to her free schools as far as the specimens presented are concerned, but it might have been much more so had all portions of the State responded to the efforts of the Centennial committee on school work. There were exhibited about 25 volumes of specimens of school work, handsomely bound in cloth; the work of the pupils compared favorably with similiar presentations from other States.—(State report, pp. 24–26.)

PEABODY FUND.

The aid derived from the Peabody fund by the better class of graded schools in the State has been of much benefit to such schools, in enabling them to continue in session much longer each year than they would have otherwise been able to do. During the year ending August 31, 1876, the sum of $12,000 was expended by the agent of this fund in aid of schools in the State, and $200 in aid of the Educational Monthly of West Virginia.—(State report, p. 20.)

CITY SCHOOL SYSTEM.

WHEELING.

Officers.— A city school board and a superintendent of public schools, who must have had at least 3 years' practice as a teacher before his appointment.

Statistics.—Estimated present population, 30,000; school population, 9,501; total enrolment in all public day schools, 4,490; in evening schools, 677. Total receipts for all public school purposes, $83,783.39; expenditures, $79,896.84. Number of regular teachers in public schools, 97; teachers of German, 6; average number of pupils per teacher, 40.

Remarks.—These figures show an increase during the year in the average monthly enrolment of 225, and in the average daily attendance of 198. There were 7 evening schools, with an enrolment of 677 pupils, and an average monthly enrolment of 491; per cent. of attendance, 73; number of teachers, 19. The day schools remained in session 10 months, the evening schools 3. The expense for tuition in the evening schools amounted to $1,710.

During the past two years there were expended in building and enlarging school houses $44,658.95, of which $24,917.24 were used in the erection of a new building, which is one of the finest in the city.—(Report of State superintendent, appendix, pp. 99–103.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The six normal schools of the State, owing to the want of timely aid by the legislature, have been much crippled in their efficiency. For the past several years the appropriation for the payment of teachers' salaries has not been made till late in the session of the schools, and as there is known to be considerable opposition to them in several portions of the State there are always some fears that such appropriations may not be made; an uncertainty that works great injury to the schools. The appropriations should be made every year before the commencement of the schools, so as to enable the board of regents to make contracts with the teachers with a certainty that the salaries will be paid as the services are rendered.

Returns from the State normal school at Marshall College, and from its branches at Fairmont, Glenville, Shepherdstown, and West Liberty, with one from Storer College, Harper's Ferry, report a total attendance of 385 pupils in normal studies, of whom 222 were men and 163 women. The number of graduates for the year was 77. The normal course in all but Storer College covers 2 years; in that, three years. Graduates of the State schools are authorized to teach in public schools in the State without further examination. There is no report from the new school at Concord.—(Returns to Bureau of Education and State report for 1875 and 1876, p. 21.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent reports 3 public high schools in 1876, against 8 the previous year, but gives no statement as to their location or the number of pupils attending.

The law contains ample provision for the establishment of such schools in either a township district, or two or more adjoining districts, in case the inhabitants, after four weeks' previous notice, should vote at their biennial election in favor of having them. The number of them reported has varied greatly in different years, indicating either lack of regular information respecting them or a somewhat fitful use and abandonment of their advantages.

PRIVATE SECONDARY SCHOOLS.

In 2 schools for girls and 1 for both sexes, outside of the public school system, there have been reported to this Bureau 526 pupils, under 15 teachers. Of these, 4 are in classical studies and 430 in modern languages. Drawing is taught in 1 of these schools, painting in 2, and vocal and instrumental music in 2. Two report libraries, numbering 700 and 360 volumes respectively.

PREPARATORY DEPARTMENTS.

Two preparatory departments report 5 teachers and 56 pupils, of whom 18 were preparing for a classical and 16 for a scientific course.—(Returns, 1876.)

BUSINESS COLLEGES.

Business colleges are in successful operation in Parkersburg, Charleston, and Wheeling. The National Business College in Wheeling is designed for the practical education of ladies, young men, and boys in business affairs, and embraces instruction in all departments of book-keeping, penmanship, arithmetic, spelling, commercial law, and correspondence.—(Report for 1875 and 1876 of State superintendent, p. 23.)

SUPERIOR INSTRUCTION.

WEST VIRGINIA UNIVERSITY.

This institution, located by the State legislature at Morgantown, in 1867, was designed to stand at the head of the State literary schools. The buildings, consisting of a university hall, an armory, and a new central hall, are new, tasteful, spacious, and well adapted to their purpose. The permanent fund, derived largely from the congressional grant to agricultural and mechanical colleges, is at present about $10,000, the income of which, together with special appropriations from the legislature, goes to meet the current expenses.

From the outset, the plan of the institution was made broad and liberal, assuming the features of a university. The various departments as at present arranged are as follows: (1) Philosophy and English literature; (2) astronomy and physics; (3) mathematics and engineering; (4) military science and tactics; (5) modern languages and literature; (6) history, political economy, and belles lettres; (7) chemistry, natural history and agriculture.

The university possesses the apparatus requisite for illustrating chemistry and physics, and its museum contains extensive mineralogical, geological, and conchological cabinets, together with many specimens in other departments of natural history. The library, numbering about 4,000 volumes, includes not only valuable books of reference, but also standard works in the various departments.—(Report of State superintendent, 1875 and 1876, pp. 23, 24.)

OTHER COLLEGES.

Bethany College, Bethany, (Christian,) has 3 separate complete courses, the classical, the scientific, and the ministerial, leading respectively to the degrees of A. B., B. S. and B. L. There are also three special courses in engineering, physics, and chemistry. There is a preparatory course of one year.—(Catalogue, 1875–'76.)

The West Virginia College, Flemington, (Free Will Baptist,) is for both sexes, and provides preparatory, commercial, academic, normal, and collegiate courses of study. —(Circular of college.)

COLLEGE FOR WOMEN.

The Wheeling Female College, an undenominational institution, chartered in 1849, reports 10 teachers and 107 pupils, of whom 22 are in preparatory, 81 in regular, and 4 in post graduate courses. Drawing, painting, vocal and instrumental music, and modern languages are taught. The institution has a chemical laboratory and a gymnasium.

SCIENTIFIC INSTRUCTION.

WEST VIRGINIA UNIVERSITY.

The agricultural department of West Virginia University provides a 2 years' course of instruction, comprising 6 schools, viz: (1) agriculture, chemistry, and natural history; (2) astronomy and physics; (3) mathematics and engineering; (4) history, political economy, and belles lettres; (5) modern languages, and (6) philosophy and English literature. Military science is also included, and for this the United States furnishes arms and equipments, besides detailing an officer from the Regular Army to act as instructor.—(State report for 1875 and 1876, p. 23, and catalogue of university, 1874–'75.)

SPECIAL INSTRUCTION.

WEST VIRGINIA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, ROMNEY.

This institution has given instruction to 35 blind and 108 deaf and dumb pupils since its foundation, in 1870, and had, in 1876, an attendance of 24 blind and 65 deaf and dumb.

Four shops were in successful operation during the 2 years ending October 1, 1876, in which were taught carpentering, shoemaking, tailoring, mattress making, broom making, cane seating, and sewing. The employments taught blind pupils are cane seating, broom making, and mattress making. The literary branches taught are English language, grammar, geography, arithmetic, history, algebra, Latin, and drawing.—(Biennial report, 1875'-76, of the institution, and special return, 1876.)

EDUCATIONAL CONVENTION.

STATE EDUCATIONAL ASSOCIATION.

The Educational Association of West Virginia met at Moundsville August 26, 1876. The address of welcome was delivered by Hanson Criswell, and was responded to by Prof. Joseph McMurran, of Shepherd College. The rollcall on the first day showed only 9 members present, but 17 new ones were immediately admitted, making a business quorum present.

Addresses and papers were presented by Prof. Joseph McMurran on "What to teach and how to teach it;" by Prof. T. Marcellus Marshall, of the State Normal School, at Glenville, on "Normal schools;" by Prof. Samuel R. Haven, on "The former and present condition of schools in Marshall County;" by Miss Cora Myers, on "What we should read;" and by Prof. H. N. Mertz, on "Geology in West Virginia." A paper of Dr. J. G. Blair was read by Professor Miller, on "Culture and religion in some of their relations." Recitations were given by Prof. L. Eskey and Prof. F. H. Crago, and after the passage of a number of resolutions, among which was one to meet next year at Martinsburg, the association adjourned.—(Educational Monthly of West Virginia, January, 1877, pp. 19–33.)

LIST OF SCHOOL OFFICIALS IN WEST VIRGINIA.

Hon. W. K. PENDLETON, *State superintendent of free schools, Wheeling*

[Term, March 4, 1877, to March 3, 1881.]

COUNTY SUPERINTENDENTS.

[Term, September 1, 1875, to August 30, 1877.]

County.	Superintendent.	Post-office.
Barbour	Perry Marteney	Burnersville.
Berkeley	E. M. Walker	Martinsburg.
Boone	Cary Toney	Mouth Short Creek.
Braxton	J. W. Humphreys	Braxton Court House.
Brooke	J. W. Hough	Bethany.

(Reports of Hon. Edward Searing, State superintendent of public instruction, for 1874–'75 and 1875–'76, with special returns to Bureau of Education.)

Notes on the statistics.—The statistical summary for 1876 embraces returns from all the school districts of the State, whereas in that for 1875 the returns from Chippewa County are not included; the increase, consequently, where increase is indicated, is not so great as appears to be the case.

The number of private school pupils who also attend the public schools some part of the year is given but partially for the cities. If given fully, and if the proper deduction were made for children twice counted, the actual aggregate attendance upon all schools would be reduced about fifteen hundred for 1875 and sixteen hundred for 1876.

Of 8,634 teachers' certificates issued, 7,712 were of the third grade, 633 of the second, and 289 of the first.

Of the 375 graded schools, 183 have only 2 departments, and 189 have 3 or more.—(State report, 1875-'76, pp. 3-5.)

It may also be mentioned that the total receipts for school purposes given in the printed State reports considerably exceed the sums above given from written returns, because the former include balances from preceding years, $469,870 in 1874 and $461,961 in 1875.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Common Schools and Public Education, by Dr. Henry Barnard; Education in Wisconsin, by President W. C. Whitford, of Milton College; Laws of Wisconsin and of Michigan; Constitution of 1848; Revised Statutes of 1849.

A BARE EARLY BEGINNING.

Originally a part of the Northwest Territory, Wisconsin was in 1809 included in the Territory of Illinois; in 1818 it was attached to Michigan Territory, and continued in this connection till 1836; was then itself organized as a Territory, including for a time the upper peninsula of Michigan and the region constituting now the States of Iowa and Minnesota; and, finally, in 1848, was admitted as a State with its present boundaries.

It was not until after its inclusion in Michigan that population began to flow in, and not until 1827 that there was sufficient concentration of this population for the support of public schools in even a few localities. Of course, to these localities the Michigan school law of that year applied. This, following closely the old Massachusetts law, ordained that the citizens of any township with 50 householders should engage a schoolmaster of good morals to teach the children to read and write, and that any one with 200 householders should have a schoolmaster who could teach Latin, French, and English. As gentlemen who were subsequently identified with educational movements in the State came with the early settlers, it might seem likely that the provisions of such a law would be carried out wherever practicable. But settlers in new regions in those days took long to get their homes and farms in order; troubles with the old Indian owners of the soil arose, and before these troubles were so quieted as to make the people feel entirely safe, the law above referred to was superseded, April 13, 1833, by one less mandatory, which left them free to do comparatively as they pleased respecting schools. So, at the close of the connection with Michigan, we learn of only 8 small private schools, with 275 pupils, and of one incipient public school at Milwaukee organized under the Michigan school law.

THE TERRITORIAL PERIOD.

When Michigan was admitted into the Union conditionally, in 1836, Wisconsin, on the supposition of an early actual admission, was organized into a Territory by itself. Under the ordinance of 1787, she came into territorial existence with a claim on the sixteenth section lands in every surveyed township "for the use of schools," and one of the first movements of her first territorial legislature was "to prohibit persons from trespassing on the school lands by cutting and destroying timber."

At the second session of the legislature, a bill was passed, November 7, 1837, to regulate the sale of these school lands, and in immediate connection with this, "to provide for organizing, regulating, and perfecting common schools." This was substantially a reënactment of the Michigan laws of 1827 and 1833, with modifications meant to secure greater efficiency. Thus, instead of waiting for 50 families in a township before establishing a school, it was required that as soon as 20 electors should reside in a surveyed township, they should choose 3 commissioners of common schools, to hold office for 3 years, to lay off districts, to call school meetings, and to apply to the payment of teachers' wages the proceeds of the leases of the township school lands. Each district was to elect 3 directors to hold office for a year, to locate school-houses, levy taxes for support of schools, and engage teachers for at least 3 months annually. Five inspectors, instead of the Michigan 10, were also to be annually elected for the township, to examine and license teachers, and look into the methods of conducting schools. The tax

levied in the districts was to be pro rata on the attendance of the pupils, and children whose parents or guardians could not pay the tax were to have it paid for them by a levy on all the inhabitants.

Two years later, 1839, the provisions of this law were modified, every township with not less than 10 families being required to become a school district and provide a competent teacher; and every one with more than 10 families to form 2 or more districts, each with its school. The 3 township commissioners dispensed with, their duties were transferred to the township inspectors, with the additional ones of caring for the school-houses, protecting and leasing the school lands, discharging incompetent teachers, and reporting to the county commissioners the number of scholars in the town. These county commissioners were to appoint inspectors for townships neglecting to elect them. In districts the school officers were termed trustees instead of directors, and were, for their districts, to have the inspectors' powers of caring for the school-houses and determining complaints against teachers. A teacher who should neglect to procure a certificate from the inspectors before entering on his work was made liable to a fine of $50. The district rate bill system was superseded by a county tax to be levied by the county commissioners for building school-houses and sustaining schools, this tax not to exceed one-fourth of 1 per cent.

In 1840 and 1841 the law was again altered, the town inspectors dropped, the town commissioners restored, a clerk and collector added to the three trustees of districts, the right of voting at school meetings restricted to male freeholders or householders over 21 years of age, the fine of $50 for neglect on the part of a teacher to secure a certificate changed to a forfeiture of a sum that should not exceed his wages, a district tax for building school-houses (additional to or in lieu of the county tax) allowed, and the duties of each school officer more specifically defined.

By this time the people were getting weary of such frequent change of laws, and so much confusion grew out of the substitution of one set of officers for another back and forth that no further important change was allowed until the Territory was about to become a State. Then a convention, called to prepare a constitution under which a State organization might be reached, inserted in 1846 at the suggestion of Dr. Henry Barnard, of Rhode Island, in the constitution proposed by it these educational provisions: (1) That there should be a general supervision of all public schools by a State superintendent of instruction and such other officers as the legislature might direct; (2) that there should be for the support of public schools a State school fund, the capital of which should be preserved inviolate, the income to be distributed in some just ratio to the attendance in the schools; (3) that—with a view to the avoidance of rate bills, which were still often levied, and to the making of the State schools truly free—there should be legal provision for raising in the towns and cities a sufficient local tax, additional to the State apportionment, to enable the people fully to sustain their schools. Uniformity in the schools of the State system, and libraries for towns and cities, were also provided for. These propositions failed to pass at that time, though they found great favor with the chief friends of common schools. But in the constitution under which the State entered the Union in 1848, essentially the same educational provisions were inserted, except that a backward step was taken in making the distribution of the income of the school fund according to the number of youth of school age, instead of according to attendance.

A STATE SCHOOL SYSTEM.

For nearly two years after the adoption of the constitution there was some confusion from conflict between old and new school laws and from defects in the provisions of the latter, passed in August, 1848. But on the 1st of January, 1850, a revised code, known as that of 1849, went into operation, and thenceforward a true State system was established. Its officers from that time have been: (1) A State superintendent of public instruction, holding office for two years, and having general supervision of the common schools; (2) town superintendents, elected annually, until 1861, for arrangement of districts, examination of teachers, visitation of schools, and apportionment of school moneys, but superseded January 1, 1862, by county superintendents, with terms of two years, counties having more than 15,000 inhabitants being allowed two; (3) district school boards, consisting of a director, treasurer, and clerk, for care of school moneys and school property, for erection of buildings, hiring of teachers, prescription of text books, and for such special supervision of the schools as may enable them to secure the full efficiency of the same. The clerk of each district board is to make an annual report of the condition of the schools.

The main features of the system, as may be seen, have been derived from Michigan, as was natural from the early connection referred to, but the wide awake teachers and officers of it have had every improvement introduced in other States in view, and have brought in others of their own origination. Of the former class are effective arrangements for teachers' institutes, school district libraries, an optional township system of school government, and a linking of graded and high schools with the university. Of the latter, is the endowment of a system of State normal schools, to make them meas-

urably independent of the whims of legislators as well as to secure them larger advantages for their great work. Four of these schools now exist, and do effective service. A State university, with colleges of arts, of letters, and of law, and with an agricultural department of moderate extent, completes the State system. There is also an institution for the blind, at Janesville, and one for the deaf and dumb, at Delavan.

STATE SUPERVISION.

Since the organization of the State system in 1849, ten gentlemen have presided over it as superintendents of public instruction. Eleazar Root, of Waukesha, had the honor of being the first chosen, by consent of both the chief political parties, without any opposition, one year after the other State officers, and of being reëlected next year for the full official term of two years, serving thus from 1849 to 1852. He greatly improved the school statistics, which at first were exceedingly imperfect, and urged the formation of teachers' institutes and schools for training teachers, as well as of graded schools and high schools.

His successor, 1852–'54, was Dr. Azel P. Ladd, of Shullsburg, who recommended the first uniform series of text books, originated the plan of holding normal institutes in counties, drew attention to the fund which could be created from swamp lands, did much to improve the comfort and healthfulness of school-houses, and brought together the teachers in a State association.

The third superintendent was the Hon. H. A. Wright, a lawyer, of Prairie du Chien, who had served as county judge. From January, 1854, to May 27, 1855, he devoted himself to popularizing the school system and to advocating, like his predecessor, the architectural improvement of the schools. He also recommended a new series of text books, and had the pleasure of securing for each school a copy of Webster's Unabridged Dictionary. He died May 27, 1855, before the expiration of his term of office.

Rev. A. Constantine Barry, of Racine, appointed to fill Judge Wright's incompleted term to January, 1856, went then by election through another term to January, 1858, advocating scientific and physical training as well as literary in the schools, and obtaining legal sanction and legislative appropriation for teachers' institutes and normal departments in academies and colleges. Under him the Wisconsin Educational Journal, established about a year before by Hon. James Sutherland and George S. Dodge, became, in March, 1856, the organ of the State teachers' association and of the department of public instruction, as the Wisconsin Journal of Education, a name it has since retained and under which it has done noble service.

Lyman C. Draper, of Madison, succeeded Mr. Barry, serving from January, 1858, to 1860, improving very much, with the aid of Dr. Henry Barnard, the conduct of teachers' institutes, and obtaining, in 1859, the passage of a law for the establishment of town school libraries, with 10 per cent. from the income of the school fund and a special tax of $\frac{1}{10}$ of a mill for their foundation and support.

Next came one since well known as superintendent of the schools of Chicago, J. L. Pickard, for fourteen years preceding principal of the Platteville Academy. Under him arrangements were made for more thorough examination of teachers, and for distinguishing them by three grades of certificates; while the law for creating the county superintendency was secured in 1861. But, partly through his influence, the portion of the school fund which had gone into the township library fund was restored to the school fund in 1862, and the remainder of the fund went in the same direction, though this last was contrary to his advice. He served through two full terms, January, 1860, to January, 1864, retiring September 30 of the latter year, in the first half of a third term, to enter on the superintendency of the Chicago schools.

Col. John G. McMynn, of Racine, served by appointment from September 30, 1864, to January, 1866, and then by election till January, 1868. He had been the chief organizer of the first graded schools in the State, had aided in the formation of the State teachers' association, and had been a prominent member of it from the outset. His superintendency was marked by the passage of the present normal school law, by the establishment of the first State normal school at Platteville, by the location of the second one at Whitewater, by the incorporation of the State agricultural college with the university, and by the embodiment in the State report of returns for academies and colleges.

Hon. A. J. Craig, of Palmyra, who had been an editor of the Journal of Education, a member of the State legislature, and an assistant State superintendent under the two last named, succeeded to the superintendency January, 1868, served through one term and into the first year of another, and was cut off by death July 3, 1870. The law for an optional township school system in place of the old district system was passed in his first term in 1869, and opens the door for large improvement in the schools if it should be extensively adopted. He also put in operation the plan of granting to teachers who stand a successful examination for them perpetual State certificates of qualification. The Whitewater Normal School was opened under him.

Rev. Samuel Fallows, of Milwaukee, was appointed to fill Mr. Craig's unexpired term to January, 1872, and then was elected for a second term to January, 1874. He se-

cured the passage of a law establishing normal institutes of four weeks' duration and appropriating $2,000 yearly to them from the State school fund. He also increased the number of the short term institutes, aided in opening the third normal school, at Oshkosh, and in locating a fourth at River Falls, and brought the high schools into closer relations with the university by the selection of a course of study preparatory to its freshman or subfreshman class, with arrangements for the admission on diploma of such as should have prosecuted this successfully.

The present superintendent, Prof. Edward Searing, of Milton College, entered on duty for his first term January, 1874, and was elected to a second in the autumn of 1875. He had been for ten years professor of Latin and Greek at Milton, had published an annotated edition of the Æneid, and was engaged when elected in preparing a kindred one of the Iliad. He has labored to improve the condition of the graded schools, to encourage the formation of town high schools, to have the text books in the schools made free, to prevent corruption in the system of supplying these, and to have the taxation for the support of schools uniform in the State, dispensing with a varying local tax. He has also succeeded in having women made eligible to all school offices below the State superintendency.

Besides the above State superintendents, President Whitford makes deserved mention of the three assistant superintendents who have served since 1858: Prof. S. H. Carpenter, of the State University, under Mr. Draper; Mr. Craig, subsequently State superintendent, under Messrs. Pickard and McMynn; and Rev. J. B. Pradt, under Messrs. Craig, Fallows, and Searing. These gentlemen are said to have aided greatly in securing uniformity of annual reports, correctness in school statistics, and intelligent decisions on questions in dispute.

ELEMENTARY INSTRUCTION.

THE LOWER SCHOOLS.

While speaking highly of the collegiate, normal, and high school systems of the State, in which he thinks her well in the advance, Superintendent Searing goes on to say that in her lower schools, where, after all, the great mass of her population must be trained, there is still much requiring remedy. "Here are too many young, inexperienced, and untrained teachers. Here are too many inconvenient, ill ventilated, unattractive school-houses. Here, too often, are no fixed terms, no defined courses of study, no educational apparatus, no uniformity of books, no adequate supervision. Here the faults of a generation ago are reproduced and perpetuated. Indeed, but for the corrective influence of institutes and the system of county supervision the district schools of to-day would be inferior to those of thirty years ago." It may be observed that it is of the district schools in the rural regions that the superintendent thus speaks. In several of the cities, and especially in Milwaukee, the lower public schools are among the excellent of their class.—(State report for 1875–'76, p. 48.)

UNINCORPORATED PRIVATE SCHOOLS.

At the time when the school system in the State was organized, a large number of unincorporated private schools were in operation. During the territorial period many of the most competent teachers had been employed in these.

It was natural that schools of this character should be continued for a season, in even some of the older settled places, after the State school system was established. To such an extent were they retained that Superintendent Ladd complained in one of his reports of their deleterious influence upon the public schools. Quite large numbers of them have been maintained each year since the formation of the State. The attendance of pupils upon them has been annually reported to be from 4,000 to 18,000. Greater numbers than these, however, have been taught in them. Some of the religious denominations in the State sustain in connection with a portion of their churches schools with primary, intermediate, and grammar departments. In these schools special religious instruction is usually given. Select schools for more advanced pupils are still kept in cities and villages, under the impression that more careful instruction is imparted and a higher moral tone maintained in them than in the public schools.—(President Whitford, in State report, pp. 383, 384.)

A STATE SCHOOL TAX.

Superintendent Searing has called attention in previous reports to the fact that the public schools of the State are too largely dependent for their support upon local and very unequal taxation, and has recommended that a State tax should supplement the scanty income of the school fund. He repeats this recommendation in the present report, giving the main points upon which it was based, as follows:

(1) That the income of the school fund is less than one-twelfth of the annual cost of the schools; (2) that taxation for the ordinary support of schools is enormously unequal, varying from 1.35 mills on the dollar in Milwaukee to 10 per cent. in some of

the newer portions of the State; (3) that, in consequence, many schools in country districts are necessarily short in duration and poor in character; and (4) that the State has now very scanty means of easily and cheaply enforcing such requirements as the good of the school system may demand; but the income of a State tax might be made a powerful means of increasing attendance and of securing many other conditions on which the welfare of the school system depends, since it could be distributed on such conditions as the legislature might see fit to impose. The principle of "payment according to results" is one which ought to be more fully incorporated into the school system of the State, as it is in those of the most advanced countries of the old world.—(State report, 1875–'76, pp. 31–34.)

CHANGES RECOMMENDED.

Superintendent Searing renews the following recommendations, previously made by him to the legislature, believing them to be essential to the more rapid and satisfactory development of educational interests and results:

(1) A radical change in the system of supervision, which will add to it greater intelligence, permanence, uniformity, and efficiency; (2) a partial change from the present extreme dependence of the school system on local and irregular taxation to the firmer and better basis of the State tax; and (3) a change from the present inefficient district system of school government to the stronger, more intelligent, and more economical township system.—(State report, 1875–'76, pp. 2, 3.)

THE TEXT BOOK PROBLEM.

Knowing that there was much popular discontent with the lack of economy and system in the supply and use of school books, the State superintendent has, since assuming the duties of his office in January, 1874, given much consideration to the subject. The result has been to confirm his opposition to a system of State uniformity of text books, as being impracticable, unsuccessful in other States, unsuitable to the various needs of the people, not economical, and unnecessary; also, to deepen his conviction of the superiority of the plan of puchase by school boards. This plan, he says, has been successful wherever fairly tried, is fully in accord with the system of local government, economical, sure to result at once in local uniformity, and is, in other ways, conducive to the welfare of the schools. He favors, above all, the free text book system, believing that from it is obtained a larger number of satisfactory results to the schools and the people than from any other plan of text book supply adopted or suggested.

Although the law authorizing district purchase of books has been known to the people of the State but little over one year, 267 districts have been reported to the superintendent as having purchased under its authority. Of this number, 137 loaned the books freely to the pupils, and 72 sold them. The remaining districts do not specify. Upward of 1,400 districts have adopted a list of text books.—(State superintendent's report, 1875–'76, pp. 9, 14–17.)

KINDERGÄRTEN.

Four Kindergärten, located in Milwaukee, report a total of 11 teachers, including the principals, and 193 pupils. One of them keeps the children employed in Kindergarten plays and studies 3 hours during 5 days of the week; another, from 4 to 5 hours, 6 days of the week; another, 5½ hours, 6 days; and the last, 5 hours, 6 days. The age of admission in all but one of these schools is from 3 to 7; in that, it is 3 to 8.—(Special returns, 1876.)

CITY SCHOOL SYSTEM.

FOND DU LAC.

Officers.—A board of education, composed of 16 members, 2 from each ward of the city, one-half the number going out of office each year, and a city superintendent of schools.

Statistics.—Number of children from 4 to 20 years of age in the city, 5,993; total enrolment, 2,967. Number of teachers employed, 49. Number of school rooms, 50. Number of pupils the school-houses will accommodate, 2,800. Total expenditures for school purposes, $32,085.47.

Remarks.—The schools, primary, grammar, and high, are divided into 12 grades, the studies of each grade occupying one year. Examinations of pupils for promotion are held annually, but those who are found qualified to enter the grade above them may be promoted at any time. The high school offers both English and classical courses. The total enrolment of pupils in it was 180; per cent. of attendance, 95.—(Report of public schools for 1875–'76, C. A. Hutchins, superintendent.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

One of the strongest features in the public school system of Wisconsin is her well planned, well endowed, and vigorous normal schools. These are endowed with a permanent fund, amounting to nearly a million of dollars, the income of which in 1876 was $81,400.63. From a single school, at Platteville, in 1866, with 6 teachers, and an aggregate enrolment of 219 pupils, the work has grown to 4 schools, with 980 students in normal departments. Three of these report for 1876 a total of 19 graduates in the higher and 39 in the elementary course. The elementary course covers a period of 2 years; the higher of 4 years.

The Platteville school had an attendance in its normal department of 204 pupils, of whom 103 were men and 101 women, and graduated 7 in the senior and 16 in the elementary class, 4 of those in the higher class, and 8 in the elementary being women.

The Whitewater school had in its normal department 95 men and 190 women, and graduated from its higher course 9 students, all but one of them women, and from its elementary course 13, of whom 11 were women.

The Oshkosh school reports an enrolment of 323 students, with 3 graduates, 2 of them women, in its advanced course, and in the elementary course 13, of whom 8 were women.

The school at River Falls, commenced in September, 1875, had an attendance during its first year of 168 students in its normal department.—(State report, 1875–'76, pp. 231-261.)

TEACHERS' INSTITUTES.

In 52 different counties, or superintendents' districts, 65 institutes were held during 1876, and were attended by 4,660 teachers, of whom 1,302 were men and 3,358 women. This is a greater number of institutes than has been held during any previous year. The increase in attendance, too, has been marked, being nearly 1,000 over that in 1875.—(State report, pp. 10, 428.)

EDUCATIONAL JOURNAL.

The Wisconsin Journal of Education, organ of the State teachers' association and of the State department of public instruction, continued its useful work through 1876, and did not yield to the centralizing tendency which drew many of the school journals of the Northwest into the Educational Weekly, of Chicago, in January, 1877.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Twenty free high schools were organized, under the high school law, during the year 1875–'76. They reported as required, and received aid from the State to the amount, in the aggregate, of $7,466.50. The beneficial results of the law are already to be seen in the systematic and comparatively uniform courses of study in the various schools organized, in a higher average grade of teachers, in increased attendance of non-resident pupils, in the greater number of students preparing for the university, and, in several localities, in new or enlarged buildings expressly erected for the purposes of more advanced instruction.

The number of pupils attending high schools during the year 1875–'76 was 1,284; average daily attendance, $895\frac{14}{20}$. Teachers employed, 37. The number of pupils studying only the higher branches was 620; studying algebra or geometry, 443; natural sciences, 561; modern languages, 194; ancient languages, 167.—(State report, 1875–'76, pp. 5, 27, 449.)

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 6 for girls, and 11 for both sexes, outside of the public school system, there have been reported to this Bureau 1,976 pupils, under 134 teachers. Of these, 208 were in classical studies, 646 in modern languages, and 3 were preparing for a classical course in college. Mechanical drawing is taught in 6 of these schools and free hand in 8; vocal music in 9, and instrumental music in 10. Chemical laboratories are reported by 6, philosophical apparatus by 8, and libraries of 40 to 2,000 volumes by 10, the total number of such volumes being 7,005.—(Returns for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Two preparatory schools and 10 preparatory departments report 43 teachers and 1,220 students. Of the latter, 422 are preparing for a classical course and 496 for a scientific. One of the schools has apparatus for the illustration of natural philosophy, and 1 a gymnasium.—(Returns for 1876.)

BUSINESS COLLEGES.

Eight business colleges report 1,391 students and 24 teachers. Of the pupils, 33 were studying phonography, 19 telegraphy, 28 German, and 9 French. Seven of the schools teach the common elementary branches and correspondence, penmanship, and bookkeeping; 4, the higher mathematics; 1, surveying; 3, banking and phonography; and 2, political economy, life insurance, and telegraphy.—(Special returns, 1876.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF WISCONSIN.

The State University at Madison embraces a college of arts, one of letters, and a law school.

The year which closed September 30, 1876, is reported to have been one of unusual prosperity to the university, not only in respect to its external and financial interests, but also as to the instruction given and the number and progress of its students.

One of the most important events of the year in its bearing on the external prosperity of the university was the appropriation to it by the legislature of an income tax of one-tenth of a mill on the valuation of the State. This was accompanied by the repeal of the previous yearly appropriations of $17,303.76, but the new tax will increase the income of the university by about $20,000.

The year was also marked by the bestowment of the first scholarships. Hon. John A. Johnson, of Madison, established ten annual ones of $50 each. This aid is for students who have attended the common school or the university at least one year; and, until the year 1900, it is limited to those who can read or speak reasonably well one of the Scandinavian languages.

The chief points of interest in the internal progress of the university during the year 1875–'76 were free tuition to all within the State; more systematic and thorough examinations for admission; a reduction in the number of transient students; a more complete separation of departments in instruction, and a representation in the Centennial Exhibition of sufficient merit to secure an award.

The results of the experiment of coeducation of the sexes in this institution are such as strongly to recommend its continuance. The examinations in all the classes were as creditable to the young women as to the young men. About one-fourth of the number attending the university in 1875–'76 were young women.—(Annual report of board of regents, 1875–'76.)

OTHER COLLEGES.

Beloit College, Beloit, (Congregational and Presbyterian,) embraces preparatory and collegiate departments, the latter with classical and philosophical courses. The object is to provide for the thorough, liberal, Christian education of young men. Its main course of study corresponds with that found in the best New England colleges, known as "the American college course."—(Catalogue, 1876–'77.)

Galesville University, Galesville, (Methodist Episcopal,) is for both sexes, and has preparatory and collegiate departments, the latter with classical and scientific courses. The degrees conferred are A. B., B. S., and Mistress of English Literature, the last being given to young women who complete the scientific course.—(Catalogue, 1875–'76.)

Lawrence University, Appleton, (Methodist Episcopal,) embraces preparatory and collegiate departments, the latter having a classical course, a scientific course, and a course in civil engineering, each covering 4 years.—(Catalogue, 1876–'77.)

Milton College, Milton, (Seventh Day Baptist,) admits both sexes to its classical, scientific, and teachers' courses. The classical course embraces 1 year of preparatory and 4 years of collegiate studies.—(Circular, 1876–'77.)

Racine College, Racine, (Protestant Episcopal,) embraces preparatory and collegiate departments, the latter comprising a school of letters and a school of science. In the school of letters the usual classical curriculum is pursued, while in the school of science a more extended course in English, mathematics, and modern languages is substituted for the study of Latin and Greek.—(Catalogue of Racine College, 1876–'77.)

Ripon College, Ripon, (Congregational,) admits both sexes to the same classes and the same degrees. There is a preparatory department covering 3 years, and a collegiate department with classical and scientific courses of study, each extending over 4 years.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Three institutions for the superior instruction of women report a total of 24 teachers and 368 students, of whom 157 were in preparatory, 84 in regular, 36 in partial, and 1 in post graduate studies. The courses of instruction cover from 4 to 8 years. All these schools teach vocal and instrumental music, drawing, painting, French, and German, and 1 teaches Italian. All have apparatus for the illustration of chemistry and natural philosophy; 1 has a natural history museum; 1 an art gallery, and 1 a gymnasium. One reports a library of 1,400 volumes.—(Returns, 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The department of agriculture of the State university is one of several scientific courses comprised in the college of arts. The design is to give in this department a thorough and extensive course of scientific instruction, in which the leading studies shall be those relating to agriculture. The university farm is used to aid in conducting experiments in agriculture and horticulture.

The other scientific courses comprised in the college of arts are the following: (1) general science, (2) civil engineering, (3) mechanical engineering, (4) mining and metallurgy, and (5) military science. All except the last of these have courses of study covering 4 years and leading to appropriate degrees. The aim is to provide a sound education in the elements of science, and at the same time to allow great freedom in the selection of studies.—(University catalogue, 1876–'77.)

THEOLOGY.

Nashotah House, Waukesha County, a theological school of the Protestant Episcopal Church, provides a 3 years' regular course of study, with a voluntary post senior year. The studies are biblical history and literature, church history and polity, systematic divinity, pastoral theology, sacred rhetoric, and Hebrew.—(Circular, 1875–'76.)

Seminary of St. Francis of Sales, near Milwaukee, (Roman Catholic,) embraces 3 courses, viz, classical, philosophical, and theological. The theological studies are dogmatic, moral, and pastoral theology; canon law, liturgy, exegesis, with an introduction into the Old and New Testaments, church history, and homiletics.—(Circular.)

LAW.

The law department of the University of Wisconsin provides a 2 years' course of instruction, given by lectures and by reading under the direction of the professors, with moot court practice. Graduates of this department are admitted to practice in all the courts of the State.—(University catalogue, 1876–'77.)

SPECIAL INSTRUCTION.

WISCONSIN INSTITUTE FOR THE EDUCATION OF THE DEAF AND DUMB.

This institution, located at Delavan, Walworth County, is a school for children who, on account of deafness, cannot be educated in the common schools. The proper age for admission is 12 years, the course of instruction lasting 5. English language, arithmetic, geography, history, and the elements of the sciences are the branches taught. Articulation has been taught with gratifying results to those who could speak before becoming deaf. The number of pupils under instruction during the year 1876 was 190.—(Report, 1875–76, and special return, 1876.)

WISCONSIN INSTITUTION FOR THE EDUCATION OF THE BLIND.

This school for the blind, located at Janesville, has, since its foundation in 1850, had 255 pupils under instruction. The number reported for 1876 was 86. Broom making, cane-seating, fancy work, sewing, and knitting are the employments taught. The library numbers 650 volumes in raised print, and 550 in common print.—(Special return, 1876.)

WISCONSIN INDUSTRIAL SCHOOL FOR BOYS.

The State industrial school for boys, located in the village of Waukesha, was opened in 1860 as a house of refuge. Its name was afterward changed to that of State Reform School, and, last, to the Wisconsin Industrial School for Boys. The institution is purely a school. The inmates are learners, and the overseers are all instructors in the families and the shops, on the farm and the playgrounds, as well as in the schools. There are now two graded schools, one, as formerly, of 5 departments or grades, and a new one of 3. A majority of the pupils are making commendable progress, and a few are excelling in penmanship, arithmetical calculations, and general knowledge.—(State report, pp. 315, 316.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-fourth annual session of the Wisconsin State Teachers' Association was held at Milwaukee July 5, 1876.

After the annual address of the president, H. C. Howland, was presented and referred to a committee for consideration, papers were read and addresses delivered by the following persons: W. H. Beach, of Beloit, on "What shall we teach?" Miss S. A. Stewart, of Milwaukee, on "Normal school work;" Hon. J. L. Pickard, of Chicago, giving many interesting reminiscences of the early days of the school system; Michael Kirwan, of Manitowoc, on "Teachers' examinations;" President W. C. Whitford, of Milton College, on "The early history of Milton College;" Professor Emerson, of Beloit,

on "The early days of Beloit;" President J. B. Angell, of the University of Michigan, on "The philosophic study of literature;" W. M. Lawrence, of Portage, on "The higher education a function of the State;" W. A. Kellerman, of Oshkosh, on "Natural sciences in the schools;" Miss Mary Walker, of Fort Atkinson, on "Our true inheritance;" L. Dow Harvey, of Sheboygan, on "Examinations in graded schools;" A. Earthman, of River Falls, on "The eye and the hand;" Miss Mary A. Brayman, of Platteville, on "Fountains of knowledge;" Dwight Kinney, of Darlington, on "Small colleges;" and Rev. C. E. Gordon, on "Education a reciprocal right."

The proceedings comprised, also, singing, the discussion of the reports of committees, and other interesting exercises. The committee on that portion of the president's address relating to the education of imbecile children reported in favor of the adoption by the State of immediate steps toward the establishment of a school for the instruction of imbecile youth. The report was adopted, members of the association pledging themselves to bring the enterprise to the attention of the people, and to advocate its favorable consideration by the legislature.—(State report, 1875-'76, pp. 299-306.)

CONVENTION OF SCHOOL SUPERINTENDENTS.

In response to the call of Superintendent Searing, thirty-two of the county and city superintendents of the State convened at Madison December 29, 1875.

The first topic chosen by the convention for consideration was, "More effective and permanent supervision," and its discussion elicited the following expressions of sentiment: That the system of county superintendency is in danger of abolition, and should be improved; that among its defects are meagreness of beneficial results, incompetent incumbents, uncertain tenure of office, meagreness of salary, and too great an amount of work. After the adoption of a resolution proposing remedies for the faults complained of, the subject of "Irregular attendance" was considered, a number of superintendents participating in the discussion.—(State report, 1875-'76, pp. 306-314.)

OBITUARY RECORD.

REV. J. LLOYD BRECK, D. D.

This active missionary educator, who passed to his final rest at Benicia, Cal., in April, 1876, laid the foundation of his high reputation in Wisconsin from 1841 to 1850. Born of a family that had known for generations the highest refinements of cultivated social life, a master of arts of the University of Pennsylvania, and a graduate of the General Theological Seminary of the Protestant Episcopal Church in 1841, he devoted himself from the outset with beautiful self-sacrifice to the then arduous work of Christian education in the West. Landing in the September following his ordination at Milwaukee, he penetrated, with two clerical companions, the just opening wilderness beyond, commenced his work at Prairieville, now Waukesha, and subsequently founded, further west in the same county, the "Nashotah House," which grew under him and his associates into one of the most successful theological schools of all the West. In 1850, still eager to be on the border and to build for a population yet to come, he removed first to St. Paul and then to Faribault, Minn. Here, also, while engaged with his usual intense activity in missionary work, he, with like minded companions, laid the foundations of the educational institutions which have since grown into the Shattuck School for Boys and the Bishop Seabury Divinity School of Faribault. Serving for a year as rector of the former to bring it into thorough working order, he, in 1867, with the same aim of laying foundations on the border, removed to California, and established in 1868 the Missionary College of St. Augustine, Benicia, and in 1871 a church school for girls, called St. Mary of the Pacific, at the same place. It was while still watching from his neighboring church the growth of these last trees of his planting that the eager missionary, ardent educator, and gracious gentleman was called to rest, when probably not more than 58.

(Special returns for 1874–'75 and 1875–'76 from Gov. A. P. K. Safford, ex officio superintendent and president of the territorial board of education.)

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

ADMINISTRATION OF GOV. A. P. K. SAFFORD.

In answer to a request for information relative to the organization of the public school system in Arizona, Governor Safford writes as follows, under date of December 14, 1876:

"Upon assuming the duties of the office of governor in the year 1869, I found that several previous legislatures had enacted school laws, but in none had any positive provisions been made to sustain public schools, it having been left optional with school trustees and county boards of supervisors to levy a school tax or not. The result was that no means were provided, and no schools were organized. I saw clearly that the first and most important measure to adopt was to provide the means by making the tax compulsory and as certain as the revenue for carrying on the machinery of the government. I at once, after assuming the duties of my office, began to agitate the subject. The first legislature convened in 1871. I prepared a school bill and presented

it to the members as soon as they assembled. Scarcely a member looked upon it with favor. They argued that the Apaches were overrunning the country; that through murder and robbery the people were in poverty and distress; that repeated attempts had been made to organize schools, and that failure had always ensued. To these objections I replied that the American people could and ultimately would subdue the Apaches; that unless we educated the rising generation we should raise up a population no more capable of self-government than the Apaches themselves; and that the failure to establish schools had been the result of imperfect statutes during the entire session.

"Finally, on the last day of the session, they passed the bill, after striking out nearly all the revenue which had been provided. The measure was the best that could be secured, and had to be accepted as it was. As soon as the legislature adjourned every part of the Territory was visited, and appeals to aid in establishing schools under the law, which constituted the governor ex officio superintendent, were everywhere made. A desire for schools soon began to appear among the people. We had no books nor teachers; all had to be procured in the older States. In the course of the following year, several schools were in successful operation, and by the time the legislature met again, in 1873, the sentiment had grown so strong that members came generally fully instructed to strengthen the school system to the extent of their power. The law was then amended, making it obligatory to levy a tax of twenty-five cents on each $100 of taxable property in counties, and also a like territorial tax, the fund accruing from the latter to be divided upon the basis of the whole number of children of school age. The next two years the school system flourished to the entire satisfaction of all interested in it. When the legislature of 1875 met, a change in the division of the school fund to a basis of those actually attending school was recommended. This amendment was adopted, and has proved very beneficial to the school interest. At this session an attempt was made to divide the school fund for the benefit of sectarian schools. The measure, ardently supported by the then chief justice of the Territory, was defeated by a large majority in the legislature. A law was also passed by this legislature making education compulsory.

"Since that time the schools have greatly increased in number and usefulness. Among those whose influence has greatly aided in organizing and successfully maintaining the school system may be mentioned Hon. T. J. Bidwell, who contributed his influence in the legislature, and was afterward, by virtue of his office as probate judge, ex officio superintendent of schools for the county of Yuma; also, C. H. Brinly, who held a like position in the legislature and the county of Yuma; Hon. J. T. Alsop, for services in the legislature and as ex officio superintendent of schools for Maricopa County; H. N. Alexander, superintendent of schools for Yuma County, and Hon. Estevan Ochoa, for services as a member of the legislature and as school trustee of the Tucson school district. Being a Mexican by birth, his devotion to the school system, and his clear, practical intelligence, have been of invaluable service in stimulating his people to sustain the public school system. There are also many others who have been of great assistance."

THE SCHOOLS IN THEIR FOURTH YEAR.

The education of the youth in Arizona has kept steady pace with the increase of population and wealth.

Of the 2,955 children of school age, 1,474 were reported in 1876 as able to read and write, making an increase over the number who could read and write reported the previous year of 566. It will be seen that very nearly 50 per cent. of the children in the Territory can now read and write. Every district in which there are sufficient children is supplied with a good free school. Many school-houses have been erected that would do credit to the older States. Considering the short time schools have been established and the many obstacles they have had to overcome, the situation, it is thought, is very encouraging, and offers the best argument that can be presented in favor of the public school system.

The present school law, Governor Safford thinks, meets in the main the wants of the Territory as well as any law that can be devised. He therefore recommends no changes in it.—(Reports of Governor Safford for 1875 and 1876 and fourth biennial message to the legislature.)

SCHOOL-HOUSES.

A two-story brick school-house was erected in 1876 at Prescott, costing, completely furnished, $17,339.30, and seating 200 pupils. One was built at Tucson, the capital of the Territory, in 1875, at a cost of $9,781.96, and paid for by donations from the people. It has three rooms, one for girls, the other two for boys in different grades. These are the only two specifically described.

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITIES.

Laws of Dakota and Reports of Territorial Superintendents.

LEGISLATIVE ACTION.

Organized as a separate Territory in 1861, Dakota then embraced the whole vast region extending from Minnesota on the east to the Rocky Mountains on the west, and from the Niobrara River on the south to the British Possessions on the north, comprising more than 350,000 square miles. A large part of it was still occupied and roamed over by the red men, and the population of the portions settled by the whites was small and sparse. Yet at the first session of its legislature, May 13, 1862, an act for the regulation and support of common schools met the approval of the governor and went at once into effect. It provided for the division of each organized county by the county commissioners into school districts; for the election in these of district school boards, composed of a director, clerk, and treasurer; for schools in each district, to be kept open at least three months in the year, to be sustained and furnished by an annual district tax, and to be free to all white children of school age (5–21) residing in the district. For the supervision of these schools county superintendents of public instruction were to be appointed by the county commissioners of each county; to apportion the school moneys according to the school population, visit the schools at least once in every term, see that the reports of them were regularly made, and examine annually all persons offering themselves as teachers. Graded schools and union schools were also provided for. Further action in the same directions was taken in the session of 1865–'66, but the alterations made are not accessible.

January 11, 1867, the law was amended by adding to the previously mentioned offi-

cers a territorial superintendent of public instruction, to hold office for a year from January 1 preceding, and subsequently to be elected for terms of 2 years, with the usual duties belonging to that office. In the same law appears a county tax for schools, additional to the preceding district taxes, and consisting of $1 on each elector and 2 mills on the dollar of all taxable property paid, a rate which has been since continued though district taxes have been increased.

Successive acts of January 3, 1868, January 5, 1869, January 13, 1871, January 15, 1875, have recognized and provided for the same territorial, county, and district school officers, with some modification of their powers and duties. Thus the duty of the county superintendent to visit the schools of his county once in each term has been changed to once a year. The duty of the territorial superintendent to hold each year a territorial teachers' institute was modified in 1873 by a permission to hold annually an institute in such counties as he should deem advisable, at which institute teachers of the county were "expected to be present;" while in 1875 this phraseology was dropped, and the old mandatory style of requiring him to hold a territorial teachers' institute from 4 to 10 days annually was restored. His duty of selecting, with the county superintendent, a set of text books for recommendation in each county was, after 1867, changed to the duty of recommending them for the Territory, and of endeavoring to secure a uniformity of them throughout. His pay of $3 daily for all time actually occupied in his official duties was made, in 1868, $4 daily; in 1873 it was changed to a fixed salary of $600 per annum, again going back to a daily pay, but of $5 instead of $4, in 1875. Since 1871 a deputy superintendent for the northern portion of the Territory has been allowed, with the same pay for the same service.

SCHOOL REPORTS.

The first published reports are not accessible, and are said to have been quite imperfect from defective school returns, but the census of 1870 showed 1,144 children in attendance on all schools, of whom 136 were foreign born.

The report of 1873, though still complaining of imperfect returns, gave the number of enrolled pupils in the 100 reported public schools as 2,006 out of a school population of 5,312, while the income from taxation for support of schools was $16,673, and the expenditure on them the same. In 1875 the number of children in the schools had increased to 4,428, gaining considerably on the reported population, while the income and expenditure for schools were each $32,603. In 1876 the enrolment was 982 beyond that of the preceding year, with an increase of 32 organized districts and of 58 teachers in public schools.

SUPERINTENDENTS.

The first territorial superintendent was James S. Foster, by choice of the legislature for two successive terms of one year each, in 1867 and 1868, and by election of the people for a two years' term from January, 1869, to January, 1871. He then became deputy superintendent for the northern portion of the Territory. His successors have been J. M. Turner, 1871–'73; E. W. Miller, 1873–'75; J. J. McIntire, 1875–'77. In November, 1876, William E. Caton was elected to succeed Mr. McIntire January 1, 1877.

GENERAL CONDITION OF EDUCATION.

PROGRESS OF THE SCHOOLS.

Since the organization of the school system steady progress has attended the efforts of the friends of education. The people of the Territory are gradually rising above the very serious obstacles with which they at first had to contend, such as sparsely settled communities, mixed population, inexperience in school matters, and want of pecuniary means. Nearly every settled portion of the Territory has been organized into school districts, in which schools are taught during some part of the year. In the organized communities there is one school district to every 30 children of legal school age. In the unorganized counties, where there are but few inhabitants, private schools, supported by subscription, have in some instances been taught. Of these schools, however, the superintendent has not been able to collect reliable statistics.—(Report for 1875 and 1876.)

GRADED SCHOOLS.

Elk Point, Vermillion, and Sioux Falls have introduced the graded school system, and are conducting their schools under the supervision of good and experienced teachers. Canton, Gayville, Bon Homme, and Springfield are partially introducing and rapidly approaching the graded system.—(Report for 1875 and 1876, p. 19.)

SCHOOL-HOUSES AND FURNITURE.

The number of school-houses built during the year could not be ascertained from the imperfect reports received, but from personal inquiry and observation the superintendent is satisfied that there were more erected during 1875–'76 than in any previous year. The houses recently built, too, are more substantial and of better material than the old ones. The log house of the river valleys and the sod house of the prairie have given way to the more elegant and commodious wood or brick building.—(Report of superintendent for 1875 and 1876, p. 19.)

PROGRESS AMID DIFFICULTIES.

In a letter dated February 21, 1876, the superintendent gives the following general view:

"Our educational interests are in a state of formation. The masses who are rushing here from all parts of our country and the Old World, forming settlements in remote and, in many instances, in widely separated parts, have to be brought together and trained in the line of order and harmony. The work is difficult and slow, yet it progresses. Our school laws are mostly copied after those of the older States which have been most successful in the educational field. We have no regularly formed school associations except in some of the older counties, which are beginning to organize county teachers' associations. The graded system has been introduced in some of the larger villages, and Yankton has a prosperous academy, the only school of higher grade in the Territory; all others are carried forward under the common school system."

CITY SCHOOL SYSTEM.

YANKTON.

Officers.—A board of education consisting of 8 members elected for terms of 4 years, 2 going out of office each year. The secretary of the board is ex officio superintendent of the city schools.

Statistics.—Number of children of school age, 5–21 years, 867; number of pupils enrolled, 626; average number belonging, 352; average daily attendance, 319; number of days the schools were taught, 185; number of school rooms used for both study and recitation, in charge of one teacher, 7; total number of school rooms, 9; number of teachers employed, 8. Total receipts for school purposes, $19,585.29; expenditures, $17,198.15.

Remarks.—The report is the first one issued by the board, which was organized in February, 1875, and covers a period of 19 months. During this period large gains have been made in the efficiency of the schools and in the number of pupils attending, so many private schools being closed that it was difficult to provide school accommodations for all who needed them. The schools are divided into 9 separate grades, including the high. The first four of these are classed as primary, the 5th, 6th, 7th, and 8th as grammar schools. The enrolment in the high school was 67; average number belonging, 44. These include the 8th-grade pupils, who are to form a part of the high school until it shall be filled with pupils who have passed that grade. Good progress has been made during the year 1875–'76 in building up this school.—(Report for 1875–'76 of board of education and Secretary Wm. M. Bristoll.)

LIST OF SCHOOL OFFICIALS IN DAKOTA.

Hon. W. E. CATON, *territorial superintendent of public instruction, Elk Point.*

[Term, January 1, 1877, to January 1, 1879.]

COUNTY SUPERINTENDENTS.

[Term, January 1, 1877, to January 1, 1879.]

County.	Superintendent.	Post-office.

* The decrease in the amount paid for teachers' wages here indicated is only apparent, as an examination of other items in the table will show; the amount for 1874-'5 includes a balance due on account of the preceding year.

(Special returns for 1874–'75 and 1875–'76, from Hon. J. Ormond Wilson, city superintendent of schools for whites.)

HISTORICAL SKETCH OF THE DISTRICT SCHOOL SYSTEM.

AUTHORITIES.

History of the Public Schools of Washington City, by Samuel York At Lee; History of the Public Schools of the City of Georgetown, by the same; Historical Sketch of the Colored Schools, by Superintendent George F. T. Cook; Historical Sketch of the County Schools, by C. B. Smith—all in Report of the Board of Trustees of Public Schools of the District of Columbia for 1874–'75.

A GREAT EARLY PLAN.

The municipal government of Washington was authorized by an amended charter in 1804 to provide for the establishment and superintendence of schools. Accordingly, the city council passed, December 5, of that year, "An act to establish and endow a permanent institution for the instruction of youth." The idea, as subsequently expanded and explained, was to have this institution embrace "three great departments," schools for teaching the rudiments of knowledge; a college in which the higher branches should be taught; and a university for the acquisition of the highest range of studies. The schools alone were to be first instituted, the college and university to wait for favoring circumstances, which never yet have come. The whole were to be under the superintendence of a board of 13 trustees, 7 appointed by the city council and 6 chosen by the persons contributing to establish and maintain the schools.

A MODEST BEGINNING.

A board selected on this plan was chosen in July, and organized in August, 1805, with Mr. Jefferson, then President, as its selected chairman. At subsequent meetings in September, the above mentioned scheme was presented and adopted; it was resolved to begin with 2 schools; one east of the Capitol and one west of it. In these "poor children" were to be taught reading, writing, grammar, and arithmetic, and such branches of the mathematics as might qualify them for occupations they were meant to follow; while pay pupils were to be instructed, also, in geography and Latin. For tuition of the "poor children" there was appropriated by the city council so much as might be necessary of the net proceeds of taxes on slaves and dogs, and on licenses for carriages and hacks, for ordinaries and taverns, for retailing wines and spirits, for billiard tables, for theatrical and other amusements, and for hawkers and peddlers. This appropriation paying the expenses of the poor, they were to be held free scholars in the schools. Others were to pay $5 a quarter for tuition. The arrangements for instruction and supervision were good.

On this basis teachers were appointed and the schools apparently commenced in 1806; but in 1809 the city council withdrew its appropriation of the taxes on slaves, &c., for poor scholars, and substituted a fixed sum of $800 a year, which was $700 less than the former had amounted to. The result was a merging of the two schools in one, from inability, with the reduced appropriation, to meet the salaries of two competent principal teachers. And as a larger range of studies was provided for, a higher charge for pay pupils was determined on for such as should go forward into the more advanced branches. The limit of instruction for poor pupils was at the same time made 2 years.

A LANCASTERIAN SCHOOL.

Even with the above economical arrangements there was embarrassment from lack of funds, and in 1812 a further change to the still more economical Lancasterian plan of instruction was resolved on. A teacher sent out by Mr. Lancaster from England was engaged, a school on the monitorial system commenced, and an effort made to secure from the city council a renewal of its first appropriation for all schools and aid in erecting a building for the Lancasterian school, with another to accommodate the overflow from it and the increase of school population. The council refused the appropriations asked for; but Congress authorized, in November, 1812, a lottery to raise $10,000 for two Lancasterian schools. What was realized from this does not appear, but probably very little, for in August, 1815, we find that the Lancasterian school first opened had been for some time discontinued for want of a room, and the suspension evidently continued till the close of the following year. The other two schools — the eastern one having been reopened, and both allowed to sustain themselves as they best could from the fees of pay scholars and a small allowance from subscriptions for free pupils — were in evident embarrassment. The council, in 1816, on an earnest and unanswerable appeal from the trustees, renewed its appropriation of $1,500 annually for the schools, and added to it a temporary one of $600 more, dividing the city at the same time into two school districts, each with its own board of trustees. But two years later the appropriation was again withdrawn, and $1,000 to the western school alone for the education of poor children substituted for it.* From this time on we read of no additional appropriation of any moment from the council till 1841, when "two female charity schools" on Capitol Hill received something from it. The other schools worked on as before on what came in from tuition fees and subscription, till, through the lotteries authorized for their relief, a fund of $40,000 was secured, on the interest of which they subsisted till 1844, the Lancasterian one continuing at least till 1827, when the reports from it drop out of view.

* Of the shifts to which this parsimony of the city councils drove the school board we have an illustration in the fact of their occupying, in 1821, evidently with great gladness, for their Lancasterian school what had been the old stable of the President, corner of 14th and G streets. The building still remains as a relic of those times and was used as a public school until 1876.

A BETTER ERA.

In 1841 an agitation for the improvement of the school system was commenced and resulted in a reorganization of it at the close of 1844 and the establishment, January 1, 1845, of a combined free and pay plan under a consolidated board composed of 3 trustees from each of the 4 wards. An appropriation of $3,650 was made by council for erecting school-houses and securing rooms, and about $5,000 annually for support of schools for several following years, from a poll tax of $1 on each free white male citizen.

In 1848, under this spirit of improvement, tuition fees were abolished and the public schools made free. In 1860 a tax of 10 cents on every $100 was authorized to be raised for their support. In 1869 a superintendency of schools was created, and from that time until now there has been continual and great advance, first under Mr. Zalmon Richards, superintendent of white schools, 1869–'70, and next under Mr. J. Ormond Wilson, who still holds the position, with Mr. G. F. T. Cook as superintendent of colored schools.

In 1874 all the public schools of Washington, Georgetown, and the county were put under the charge of a consolidated board of 19 trustees, 11 to be residents of Washington, 3 of Georgetown, and 5 of the county. Of this board, Messrs. Wilson and Cook are the executive officers.

The schools of Georgetown, beginning with a Lancasterian one in 1810, experienced in their early days the same embarrassments from lack of funds with those of Washington; but after 1815 they had an annual appropriation of $1,000. In 1855 a revival and improvement of them was begun which advanced with steadily increasing momentum until 1874, when the school guardians of the earlier times and the trustees of 1871 yielded to the one board of 19 trustees for the whole District, constituted in 1874. Since then it has had erected for it one of the most spacious and commodious school buildings of the District, and now numbers 17 public schools in at least 4 different buildings, with about 1,500 pupils in them, having also the advantages of the Peabody free library, and of the Linthicum Institute, a free evening school.

The county schools, embracing in their territory all the District outside of the cities of Washington and Georgetown, were first organized as a portion of the public school system under an act of Congress approved June 25, 1864. In the first year following 4 school-houses were erected and 5 rented. At the close of 1866 there were 10 school-houses, 13 schools in operation, and 635 pupils; under the guardianship of the 5 members of the District school board, since 1874, they have gone on increasing till at the close of the year 1874–'75 they numbered 18 school buildings, 32 schools, and 1,876 pupils.

The colored schools, as public schools, took their rise from an act of Congress passed May 21, 1862, requiring that 10 per centum of the taxes collected from persons of color in Washington and Georgetown should be set apart for the initiation of primary schools for colored children residing in these cities. The small amount resulting from this did not permit of the opening of any school till 1864, when one was set on foot. Another act of June, 1864, gave the colored children their full proportion of all school funds raised in the two cities; and from 1866, when this law went into operation, their schools have increased from 5 to 75 within the District, their teachers from 7 to 88, and the pupils from 450 to 5,489 to the close of the school year 1874–'75.

A normal school for the instruction and preparation of female teachers for the white schools of the District has existed since 1873, and in the Sumner colored school there is also some training of teachers for the colored schools.

There is no central high school yet established, though one was authorized as far back as 1848. High school studies are, however, pursued in different schools.

ELEMENTARY INSTRUCTION.

PUBLIC SCHOOLS IN THE DISTRICT OF COLUMBIA.

The District of Columbia has an area of about sixty-four square miles, and is divided into the cities of Washington and Georgetown and an adjacent rural district called the county. The school population is composed of white and colored children, about two-thirds belonging to the former class and one-third to the latter. The races are separated in the public schools, but like advantages are afforded each. The white schools are taught exclusively by white teachers. The establishment of schools for colored children was a happy sequence of the great rebellion, and their history therefore extends back but little beyond a decade. In their beginning the employment of white teachers, to a great extent, was quite necessary. As their schools have advanced they have furnished competent, and in many cases excellent, teachers, until very few white teachers are now found in these schools. About one-eleventh of the school population of the District of Columbia is found in the county. The schools for these children are similar to country and village schools elsewhere; those in the small villages near the boundaries of the city being partly graded, and those in localities having a sparse population being ungraded. All of the public schools of the District of

Columbia are under the control of one board of trustees, composed of 19 members, 14 white and 5 colored; 14 from the cities and 5 from the county. The board of trustees has divided the schools under its charge into 7 school districts; the white schools of Washington constituting 4 of these districts, and the white schools of Georgetown, the white and colored schools of the county, and the colored schools of the two cities, each constituting 1. It has also divided itself into 7 subboards, severally subject at all times to the control of the board, and assigned to each the practical supervision of the schools of a district.

There are two superintendents, one having charge of the white schools in the cities and both classes of schools in the county, and the other having charge of the colored schools in the cities.

The members of the board and the superintendents are appointed to their offices by the Commissioners of the District of Columbia, and the term of office is subject to their pleasure.—(Report for 1875–'76 of Hon. J. O. Wilson, superintendent, p. 21.)

WHITE SCHOOLS OF WASHINGTON AND GEORGETOWN.

The whole number of white children enrolled during the year 1875–'76 was 12,083; the average number enrolled was 9,831; and the average daily attendance was 9,343. The per cent. of the entire white school population enrolled in the public schools was 62.9. Taking all the schools, the normal school included, for the whole year, we find the average number of pupils enrolled for each teacher to have been 55—one more than for the previous year.

The percentage of attendance based upon the average number enrolled was 95.1, showing a gain of .6 over the past year. The largest number of pupils enrolled on the last day of any month is found in November, when it was 10,026. The number of pupils on the rolls at the close of the schools in June was 9,025, a larger proportion than usual having continued in school to the end of the year.

The attendance in the public schools of these cities is now limited by the accommodations furnished. The lack of these has caused the assignment of too many pupils to a teacher. An average enrolment of 55 pupils to each is quite too large, larger than will be found in other cities. Almost the entire school population would attend the public schools if they were prepared to receive and properly instruct so many pupils.

It was found necessary at the beginning of the year to increase the number of half-day schools. There are twenty in operation at this time, all of the first and second grades. The children in these half-day schools are making as good progress as those who attend all day. Continued experience and observation confirm the opinion expressed in former reports, that the daily school session for children during the first two years of the course should not exceed from three to four hours.

ARRANGEMENT OF STUDIES.

The course of study is divided into nine grades, each including a year's work. The first eight grades comprise the course ordinarily prescribed for elementary schools. In the ninth, high school work is begun; some of the studies of the eighth are continued, and the following, in addition thereto, are permitted: astronomy, book-keeping, botany, English literature, geometry, general history, physics, physiology, and rhetoric. Pupils of these highest two grades were seated in the same school room and instructed by the same teacher until the beginning of the present school year, when the several small advanced classes of girls were consolidated and organized into a separate school called the advanced grammar school for girls.

There is now abundant material in our schools, and urgent demand for a large high school. The best interests of these cities require that the provisions for public education shall be as good and extensive as can be found in other places.

At the beginning of the year, the course of study in drawing was revised and adapted to the present wants of the schools. Each year finds the higher grades further advanced in this study, and will continue to do so until the pupils in the lowest grade where Walter Smith's system was introduced, in 1873, have passed through all the grades up to the highest, receiving the instruction prescribed for each. During each of the past three years all the teachers have regularly attended a course of normal lessons given by the teacher of drawing on Saturdays, and in this way have made themselves competent to teach drawing well.*—(Report for 1875–'76 of Superintendent Wilson, pp. 24, 27, 32, 34, 40.)

SCHOOL BUILDINGS.

Superintendent Wilson, in his report of the white schools for 1875–'76, says:

"At the present time the lack of suitable buildings for the white schools of Washington is the most important subject to which the attention of the board can be called. The number of these schools is 166; the whole number of pupils enrolled in them during the last school year was 10,967, and during the past four years the average annual in-

* So well, indeed, that more than one observer, after a visit to the educational exhibit at the Centennial, thought the work upon the blackboards in the chief schools of Washington and Georgetown might well challenge comparison with that of almost any city schools.

crease in the enrolment has been about 700 pupils. Each school by itself occupies a room for both study and recitation, and thus 166 school rooms are required. Fourteen buildings, owned by the District of Columbia and designed and erected expressly for school purposes, furnish 94 schools with very good rooms, and the remaining 72 schools, which are attended by about 4,500 children, are occupying such tenements as can be rented for their use: basements of churches, wooden barracks left by the late war, spare rooms in market houses, and edifices originally designed for private residences, and so constructed that they can readily be changed into residences in the event of their abandonment by the schools. In the construction of these rented rooms no thought of providing an abundant supply of light and pure air for 60 children entered into the design of the architect or builder. Such improvements as were feasible have been made at the expense of our school fund, and yet, in some instances, these rooms have been condemned by the board of health, and in many more by the parents whose children are obliged to occupy them or remain out of school. They are a constant source of annoyance to the school officers, upon whom is imposed the duty of assigning the pupils to the various schools, as all parents desire to have their children placed in the better buildings, however distant from these may be their residences. The inequality of the accommodations furnished by these two classes of buildings is manifest.

"At the same time the District government is paying for the inferior rented rooms about $25,000 per annum, a sum sufficient to purchase a site and erect a substantial building, with eight or ten good school rooms, in which could be seated a number of pupils equal to the average annual increase in the enrolment. The amount paid for rent per annum averages fully 10 per cent. of the value of the property rented, and so much of the school fund is absorbed in this way that all hope of purchasing sites and erecting buildings seems to be precluded from the future, unless there is a radical change from the present policy. A change is certainly advisable.

"At the prices now ruling for ground and materials and labor for building, it is estimated that $225,000, economically and judiciously expended in sites and plain, well arranged buildings, would furnish all the accommodations supplied by the rooms now rented. If this sum were borrowed the annual interest at 6 per cent. would amount to but $13,500, thus leaving of the sum now paid for rent and repairs $11,500 to be applied to the payment of the principal.

"The evil of paying out so large a portion of the school fund for rents and repairs has been and is growing rapidly, keeping pace with the increase of attendance in the schools, and very little has been done to check it during the past five years. The Jefferson school building was completed in the summer of 1872, and since that time there has been erected for the white schools of Washington but one school building, and this gave them only six additional school rooms.

"The accommodations for the other schools in the District of Columbia are more satisfactory. In Georgetown and the county the buildings occupied by the schools are all owned by the District government, and are in good condition. Prior to the recent destruction by fire of the John F. Cook building, which contained twelve school rooms, only seven school rooms were rented for the use of the colored schools of Washington and Georgetown. All the other rooms occupied by these schools were in buildings owned by the District government."

Superintendent Wilson recommends that the fund to endow the white schools of Washington, which was created under acts of Congress approved in 1812 and 1820, be invested in school sites and buildings. It is now invested in corporation stock, which pays only 6 per cent. interest, while the District government is renting buildings for the use of the schools to which it belongs at an annual cost of from 10 to 15 per cent. of their value.—(Report for 1875–'76 of Superintendent Wilson, pp. 21–23.)

SCHOOLS FOR COLORED CHILDREN.

These schools are graded as primary, grammar, and high, the primary covering the first, and the grammar the last 4 years of the course.

Of the schools in operation during the year, 62 were primary, 13 grammar, and 1 high. Of the primary schools, 4 were of mixed classification, having each a class pursuing studies of the lowest grammar grade; 6 of the grammar schools, also, had each a class pursuing studies of the highest primary grade. In the organization of these schools one year was required for the completion of a grade, as in the white public schools of Washington. The constant fluctuations in attendance showed that the adherence to the grade of a year's length presented many disadvantages. It was found, shortly after the opening of the schools in each year, that vacant seats increased monthly from the frequent withdrawals on account of the adverse circumstances of very many of the population. A choice between two evils, under the circumstances, was presented, viz, a large number of vacant seats, to maintain fair grading, or the abandonment of good grading in promiscuous admission. A large number of vacant seats, in the face of thousands of children without other school provision, seemed violative of the act of establishment and subversive of its ends; while admission to the vacant seats, irrespective of attainments, or without adaptation to the progress of the grade, favored such multiplicity of classes as to make efficient instruction very slow

and uncertain. In the consideration of such disadvantages it was seen that relief, to some extent, could be had in such divisions of the course of instruction as would require less time for the completion of each division, and thereby afford more frequent opportunities for beginning the grade; therefore the grade of one year's length was divided into two grades of one half year each. Such action has greatly enhanced the admissions.

The whole number of pupils enrolled was 5,454, or about 50 per cent. of the school population. The average number in daily attendance was 4,354, which was 98.1 per cent. of the average enrolment. The entire enrolment was 35 less, while the number in daily attendance was 430 greater than in the previous year, thus showing a very positive and favorable increase in regular attendance.

In the study of music, results generally were excellent. The classes organized the previous year among the corps of regular teachers were continued with increased benefit to the schools. In music, as in drawing, colored children show the greatest aptitude, and the ease with which they learn to read music, even of very difficult character, is almost wonderful. This ready acquisition is confined to no one grade, but is quite general in all.—(Report of Superintendent G. F. T. Cook, pp. 172–175, 180.)

KINDERGÄRTEN.

Six private schools of the above class report an aggregate attendance of 163 pupils taught by 6 assistants and the principals. All these schools were kept open 5 days of the week. In two of them the sessions lasted 4½ hours; in one, 3½; in one, 3; in another, 4; and in another, 5. In 3 of these schools the age of admission was from 3 to 7; in the others it was from 3 to 8, 3 to 9, and 3 to 10.—(Special returns, 1875–'76.)

TRAINING OF TEACHERS.

NORMAL CLASSES.

The normal school of Washington—though not yet supplied with half the facilities it needs, its course limited to a single year, its teaching force too small, and both the age and the qualifications of its pupils on entering below the desirable standard—has amply demonstrated the potent and beneficent influence of a training school as a part of a city system. Since its establishment, in September, 1873, it has graduated 56 teachers; of which number one, an excellent teacher, died, one is now teaching in a private school, and 53 are teaching in the public schools of the city: 21 in the first grade, 18 in the second, 6 in the third, 5 in the fourth, and 3 in the fifth. A more intelligent, skilful, and zealous body of young teachers we venture to assert can nowhere be found. Since this new force entered the first grade—the first, and, perhaps, the most important year of the course—not only has the quality of the work been greatly improved, but the quantity has been well nigh doubled.

Twenty young ladies were admitted into the Washington Normal School in September, 1875. One of the number was compelled to withdraw in November on account of the death of her father. Nineteen completed the course of study, and received their certificates June 9, 1876.

A normal department has been established in connection with the high school for colored children. The course of study is the same and covers the same time as that of the normal school. Graduates, if employed to teach, receive certificates as acting teachers, and after one year's successful practice are given full certificates as teachers. A class of 12 was graduated from this department in 1876.—(Report of the board of trustees, 1875–'76, pp. 36, 182.)

To the above must be added the normal departments of Howard University and of Wayland Seminary and Miner Normal School, all in Washington. The first 2 have a course of instruction covering 3 years; the last has a course of 2 years. The normal students in Howard University during 1875–'76 numbered 27, of whom 12 were men and 15 women. The attendance at the other two schools is not given.—(Special returns and printed report.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The high school branches are studied in the higher grammar grades of the public schools for white children and in the high school for colored children. In the eighth grade of the schools for white children there were 144 pupils in 1875–'76, and in the ninth or advanced grade, 144. The high school for colored pupils numbered 75 students, including 12 in the normal department.—(Report of board of trustees, 1875–'76.)

PRIVATE SECONDARY SCHOOLS.

In 5 schools for boys, 15 schools for girls, and 3 for both sexes, outside of the public school system, there have been reported to this Bureau 1,107 pupils under 108 teachers. Of these 191 are in classical studies, 197 in modern languages, 38 preparing for a classical course in college, and 8 for a scientific course. Mechanical drawing is taught in 7 of these schools, free hand in 15, and vocal and instrumental music in 13. Chemical laboratories are reported by 4, philosophical apparatus by 5, and libraries aggregating 3,491 volumes by 11.

BUSINESS COLLEGE.

The Spencerian Business College reports for 1875–'76 an attendance of 150 students, of whom 25 were studying phonography. The studies taught are the common English and correspondence, penmanship, book-keeping, banking, commercial law, political economy, and phonography.—(Special return.)

SUPERIOR INSTRUCTION.

COLUMBIAN UNIVERSITY, WASHINGTON.

This university embraces preparatory, collegiate, law, and medical departments. The course of instruction in the collegiate department is comprised in 7 schools, viz: (1) English; (2) Greek; (3) Latin; (4) modern languages; (5) mathematics; (6) natural science; and (7) philosophy. The denomination in control is Baptist.—(Catalogue, 1875–'76.)

GEORGETOWN COLLEGE, GEORGETOWN.

The departments here, under a university charter granted in 1815, are classical, medical, and law. The classical, including a preparatory course, covers a period of 7 years. Applicants for admission to the preparatory course must know how to read and write, and must bear a good moral character. The college is under the control of the Roman Catholic Church.—(Catalogue, 1875–'76.)

HOWARD UNIVERSITY, WASHINGTON.

This institution is non-sectarian, and admits both sexes and all races. The departments of instruction are normal, preparatory, collegiate, medical, theological, and law.—(Catalogue, 1874–'76.)

NATIONAL DEAF-MUTE COLLEGE, WASHINGTON.

This college, organized in 1864, is not sectarian. It provides for deaf-mutes a collegiate education similar to that usually given in American colleges. The full course of 4 years leads to the degree of A. B.; while a selected course of 2 years leads to that of B. S. There is also a preparatory department.—(Circular of college, 1874–'75.)

PROFESSIONAL INSTRUCTION.

THEOLOGY.

The theological department of Howard University admits students of every Christian denomination, and provides a complete course of 3 years. Instruction and rent of rooms are free. Both sexes may be admitted to this, as to all other departments of the university.—(Catalogue, 1874–'76.)

Wayland Seminary is located on Meridian Hill, Washington, and is under the direction of the American Baptist Home Mission Society. Its purpose is to assist in providing preachers and teachers for the South, and at the same time to prepare the way for the mission work which, it is thought, must before long be undertaken for the millions in Africa. The departments of study are normal, academic, and theological.—(Catalogue, 1875 and 1876.)

LAW.

The Law School of the Columbian University presents a course of study covering 2 years. The course is adapted to graduates of colleges and to others whose mental powers have received sufficient discipline. All, however, who desire, are admitted to the recitations and lectures of the school, it being understood that their graduation will depend on their success. The exercises of the school are held after usual office hours,

which enables young men employed in Government departments to avail themselves of the facilities of the school.—(Catalogue, 1875–'76.)

The law department of Howard University provides a 2 years' course of study, which is open to all who possess the requisite qualifications. Students to be admitted must be well grounded in the common English branches, in rhetoric and in elementary natural science. These requirements will be increased after the summer term of 1877, and will then embrace algebra, geometry, Latin, logic, and mental science.—(Catalogue of university, 1874–'76.)

The law school of Georgetown University provides a course of instruction covering a period of 2 years. Its plan embraces lectures, examinations, and recitations, with moot court proceedings.—(Catalogue, 1875–'76.)

National University, Law Department, Washington, examines in advance those who enter as candidates for the degree of LL. B., and requires that candidates for the degree of D. C. L. shall have received the former one. It has 4 professors and a full legal course.—(Statement by vice-chancellor.)

MEDICINE.

The medical department of the University of Georgetown requires of candidates for graduation that they shall have studied medicine not less than 3 years, including 2 full courses of instruction in some regular medical school, the last of which shall have been in this.—(Report of medical department, 1876–'77.)

The medical department of Howard University provides free instruction for all who wish to study medicine and are qualified to do so by good moral character, proper age, and suitable education. Among the requisitions for graduation are 3 years' study of medicine with some regular practitioner, and 2 full courses of lectures at some regular medical college, the last of which must have been at this.—(Prospectus of medical department, 1876–'77.)

The National Medical College of Columbian University, organized in 1825, offers a course of study comprising a complete course of lectures on the 7 essential branches of medical science, viz: anatomy, physiology, materia medica, chemistry, surgery, obstetrics, and the theory and practice of medicine. Ample opportunities are afforded for bedside instruction. For graduation, 3 years' study of medicine is required under the direction of some regular practitioner, including two courses of lectures.—(Catalogue of college, 1876–'77.)

SPECIAL INSTRUCTION.

COLUMBIA INSTITUTION FOR THE DEAF AND DUMB.

This institution, situated at Kendall Green, near Washington, was founded in 1857. A department of it, the National Deaf-Mute College, organized in 1864, has been noticed under Superior Instruction. Since the foundation of the institution, 328 pupils have received instruction here, and 24 graduates have become teachers in similar schools for the deaf and dumb. In the primary department the branches taught are reading, writing, arithmetic, grammar, geography, and history. The number of pupils under instruction in 1875–'76 was 100, of whom 85 were males and 15 females.—(Report of the institution, 1874–75, and special return, 1875–'76.)

(Report for 1875 and 1876 of Hon. Joseph Perrault, superintendent of public instruction, pp. 42, 43.)

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITIES.

Laws of Idaho, and Reports of Territorial Superintendents from 1868.

LEGISLATION RESPECTING SCHOOLS.

The Territory of Idaho was organized by act of Congress approved March 3, 1863, the organic law reserving sections 16 and 36 in every surveyed township for the use of schools, with a title, under act of September 4, 1841, to 500,000 acres for public improvements on becoming a State.

The first territorial school law, December 17, 1864, established a school fund from the proceeds of the school lands, with any money appropriated to school purposes by legacy or otherwise. The principal of this was to be irreducible and indivisible, and the interest was to be annually divided among school districts on the basis of school population, together with 5 per cent. of all moneys paid into county treasuries and all fines arising from breach of penal laws. For supervision and management of school affairs there were to be (1) a territorial superintendent of schools; (2) a territorial board of education, composed of the territorial superintendent, auditor, and treasurer; (3) county superintendents; and (4) district trustees; these trustees to employ teachers, furnish fuel for the school-house, have the custody of the same, and, with the county superin-

tendent, to examine persons proposing to teach in their district—no certificate to teach to be valid without their approval. They were also to visit the school from time to time, to see that it should conform in text books and system of teaching to the rules of the territorial board, and were annually to provide for enumerating the children of school age. Teachers were to keep a register and file it with the trustees, and from such files reports were to be made to the county superintendents, and thence to the territorial superintendent.

The second school law, January 12, 1866, provided a special county tax for schools of 1½ to 2 mills on all taxable property, in place of the 5 per cent. above referred to, with the proceeds of the school fund and of fines as before. The unclaimed moneys of estates of deceased persons were added to the sources of the permanent school fund, and to the annual fund 1 per cent. of the proceeds of all franchises. The territorial board of education was made to consist of the governor, territorial superintendent, and controller, who had come into the place of the former territorial auditor. Provision was made for choosing the territorial superintendent at the general election, to hold office for 2 years. County superintendents, also for 2 years, were again provided for, with county boards of education, to be composed of the superintendent and two persons associated with him, for the examination of teachers. Trustees of districts, 5 instead of 3, again appear, but with the above curtailment of their power as to teachers to be employed by them. Negroes, mulattoes, Mongolians, and Indians were excluded from the benefits of the public schools.

A law of January 13, 1871, added to the former sources of the school fund 10 per cent. of all moneys paid into the treasury of the Territory; allowed the county school tax to go up to 5 mills; made the territorial controller ex officio superintendent of public instruction; continued the county superintendents and district trustees, reducing, however, the number of trustees from 5 to 2, with terms of 2 years, and making the county superintendent ex officio a member of each board of trustees in his county. The trustees were semi-annually to make report of their schools to the county superintendent, and he annually to the territorial superintendent.

January 15, 1875, another law changed the school age from 5–21 to 5–18; made the minimum county tax 2 mills, leaving 5 mills as its maximum; continued the territorial controller as territorial superintendent of public instruction; left the county superintendency, but made the county auditors ex officio superintendents, save in two counties where the probate judges were to act as such; dispensed with former county boards, as had the law of 1871; and made the number of district trustees 3 instead of 2, with one-year terms, and with the duty of reporting to the county superintendent annually instead of semi-annually. Up to the date covered by this report, no other school law had been enacted; but action for the improvement of some points in this one was recommended by the superintendent.

REPORTS RESPECTING SCHOOLS.

The first available report of the working of the school system, that for 1867–'68, gave the number of school districts as 24, of school-houses as 12, of schools as 15, school population, (age, 5–21,) 926; attendance in schools, 345; total expenditure for schools, $5,799.

In 1873 the number of districts had increased to 54, the school-houses to 41, the schools to 51, the school population (age, still 5–21) to 3,233, the attendance to 2,196; the expenditure for schools to $27,181.

In 1876, three counties failing to report, the number of districts is given as 77, but no number of schools or school-houses is reported. The school population (the age being now only 5–18) appears diminished to 2,777, but the attendance has gone up to 2,724, and, with a considerable increase in the receipts for schools, the expenditure has been reduced to $16,590.

SUPERINTENDENCE.

No list of superintendents has been received from the Territory, but, from the reports at hand, the succession seems to have been: Daniel Cram, 1866–'72; Joseph Perrault, 1872–'76.

ELEMENTARY INSTRUCTION.

SCHOOL REPORTS.

In all the larger towns and more densely settled localities of the Territory there are flourishing and well sustained public schools. Reports of county superintendents show a meagre array of figures which by no means represent the flourishing condition of many schools in the Territory and the deep interest taken in education by the people. This paucity of reports is not the fault of the county superintendents, but that of the system under which they are compelled to act. The law makes the county superintendencies ex officio appendages to other important and responsible county offices, which confine the incumbent to his place of business and to a routine of duties, thus rendering the personal supervision of schools impossible. The county superintendent can

only collate and report such information as he may receive from reports made to him by the trustees of the different school districts in his county. The law gives to the trustees of the various school districts the entire control and supervision of schools within their respective districts as regards the qualifications of teachers and all local matters pertaining to education. There is generally throughout the Territory a deep interest felt in education, and laudable efforts are made to maintain good schools; but the importance and necessity of promptly making accurate and full reports do not seem to be so fully appreciated. On the contrary, in this matter there is a sad degree of negligence and failure.

The remedy must come from an increased zeal on the part of those who are rightfully supposed to have an immediate personal interest in the advancement of education, and who should be moved by a just pride to make the best possible truthful showing for the local communities in which they live. It must be the work of the school trustees of the various school districts.—(Report of territorial superintendent for 1875 and 1876, pp. 4, 5.)

SCHOOL FUND.

The sources from which a territorial school fund may be drawn are contingent and limited. There are at present no moneys in the hands of the territorial treasurer credited to that fund. The change made in the law at the last session of the legislature, reserving to each county in the Territory the entire benefit and control of all moneys raised by taxation and fines within the county, meets with the approbation of the people; but the amount of money thus far realized from these sources is found inadequate to the wants of schools. The superintendent, therefore, recommends that the rate of taxation for school purposes be made 5 to 10 mills on each dollar of taxable property, instead of the 2 to 5 mills of the law of 1875.—(Superintendent's report for 1875 and 1876, p. 5.)

TEACHERS.

The want of a sufficient corps of competent teachers for the public schools is severely felt in Idaho, as elsewhere in newly settled regions. One cause of this lies in the mistaken policy of letting out the contract for teaching school to the lowest bidder. Another cause is the absence, in most cases, of any competent and responsible authority for the examination of those offering to teach. The present law authorizes the trustees of the school districts to examine and employ teachers. The first person who comes along wanting a situation who can gain the goodwill of the trustees and of the confiding and easily satisfied parents and guardians, need entertain no fears from any trying ordeal in the shape of an examination, more especially if she or he is willing to enter upon the task for a salary so small as to defy competition.

The superintendent suggests that provision be made in the law for a board of examiners for each county, and that they be required to meet at the county seat at stated times, after due notice given, for the purpose of examining teachers and granting certificates. A higher standard of excellence and of qualifications required for teachers would inspire them with the courage and ambition to meet and organize teachers' institutes, where all would be benefited by an interchange of ideas and a comparison of methods.—(Superintendent's report for 1875 and 1876, pp. 7, 8.)

(From returns made to the United States Bureau of Education for 1875–'76 by S. W. Marston, Indian agent.)

GENERAL EDUCATIONAL CONDITION.

SCHOOL REVENUES.

The means for support of schools among these nations are received chiefly from interest on permanent funds held for them by the United States. Only two nations, the Cherokees and Seminoles, report $3,000 and $1,500, respectively, from other funds.—(Returns to Bureau of Education.)

BOARDING AND HIGHER SCHOOLS.

Besides 75 common schools reported, the Cherokees have, for the higher education of their young men and women, 2 commodious and well furnished seminaries, 1 for each sex, together with a manual labor school and an orphan asylum. All these buildings are of excellent architecture, and are equipped with furniture and fixtures of the latest and best manufacture. The cost of the seminary for young men was $75,000; that for young women, the same; that for orphans, $70,000.

The Creeks have, with 28 public day schools, 2 manual labor schools; the Tallahassee Mission School, between the Arkansas and Verdigris Rivers, with accommodations for about eighty boarding pupils of both sexes; and the Asbury Mission School, near Eufaula, with accommodations for the same number, males exclusively. These schools are under the care of the Presbyterian and Methodist denominations. The Muskogee Female Institute is a Baptist mission school of considerable note, with the Rev. Joseph Perryman, a native Creek, as principal. Appropriations have been made by the council for 2 other mission schools, which will probably be soon opened. One of them will be for the freedmen citizens of the nation, who share equally with others all tribal rights and privileges.

Provision was made, too, at the last council for the support of 18 young men while obtaining an education in the States. They are now pursuing their studies at different institutions.

The Choctaws have 1 boarding and 1 manual labor school, besides 54 day schools, and several private institutions supported by tuition fees. The New Hope Seminary, a boarding school for girls, near Scullyville, has about 50 pupils, for whose board and other expenses the council annually appropriates $5,000, while the Methodist Board of Missions pays the salary of the teachers and such other expenses as the amount appropriated by the council fails to meet.

The Chickasaws, in addition to their 13 district common schools, scattered judiciously over the country, have established an academy or high school in each of the 4 coun-

* Includes board, &c., in high and orphan schools.

ties of the nation, where pupils may pursue studies beyond the primary branches. These high schools are let out by contract for a term of 5 years, the contractors furnishing the teachers, and in 3 of them supplying the pupils with everything but clothing at the rate of $175 per year; in the other clothing and all are furnished for $200 a year.*

The Seminoles, with 5 other schools, have 1 academy or boarding school, under the supervision of the Presbyterian board.—(Returns to Bureau of Education, and report of Agent S. W. Marston.)

UNITED STATES INDIAN SERVICE — EDUCATIONAL STATISTICS, JULY, 1876.

The schools of the Cherokees, Creeks, Chickasaws, Choctaws, and Seminoles of the Indian Territory are not included in the following tabulation, which comprises those only maintained by the United States Government. The statement is furnished by the Office of Indian Affairs.

Number of scholars registered —	
Indian: male, 2,315; female, 1,703 }	
Half-breed: male, 375; female, 341 }	4,734
Freedmen: male, 61; female, 61	122
Number of day schools	76
Average attendance —	
Indian: male, 788; female, 607 }	
Half-breed: male, 151; female, 144 }	1,690
Freedmen's schools, day	3
Average attendance: male, 39; female, 45	84
Number of boarding schools	42
Boarders —	
Indian: male, 700; female, 482 }	
Half-breed: male, 109; female, 72 }	1,363
Day scholars attending said boarding schools	282
Average attendance at day schools	22
Average attendance at boarding schools	39
Number attending who can read and write English understandingly —	
Indian: male, 794; female, 488 }	
Half-breed: male, 180; female, 174 }	1,636
Number who can work in first four rules of arithmetic —	
Indian: male, 486; female, 246 }	
Half-breed: male, 97; female, 91 }	920
Number of teachers employed in schools not under contract —	
Male	66
Female	74
Average annual salaries paid male teachers	$695
Average annual salaries paid female teachers	465

Annual cost of same, not included in foregoing figures	34,136.88

SCHOOLS MAINTAINED BY RELIGIOUS DENOMINATIONS.

From the same authority the following statistics respecting schools maintained by religious denominations have also been obtained:

Presbyterian: day schools	5
Aggregate attendance at same	215
Protestant Episcopal: day schools	4
Aggregate attendance at same	104
Boarding schools	3
Aggregate attendance at same	64
Friends: boarding school on Alleghany reservation, State of New York	1
Aggregate attendance at same	29
Number of scholars attending schools in State of New York not under control or care of the United States Government.	944

LIST OF SCHOOL OFFICIALS IN INDIAN TERRITORY.

The only names of school superintendents among the five nations that can be certainly given are the following:

E. McCUSTAIN, *superintendent of Choctaw public schools, Red Oak.*
JOHN CHUPCO, *superintendent of Seminole public schools.*
JOSHUA HIGHTOWER, *superintendent of Chickasaw public schools.*

*The freedmen of the Choctaw and Chickasaw Nations have had thus far no participation in the school funds of the Indians, and consequently no educational advantages except what are furnished them by the United States Government. There are at present 5 schools sustained for their benefit, but at points accessible to only a small portion of them.

(Reports for 1874–'75 and 1875–'76 of Hon. Cornelius Hedges, superintendent of public instruction, and special returns to the United States Bureau of Education.)

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITY.

Hon. Cornelius Hedges, Territorial Superintendent of Public Instruction.

FIRST GENERAL SCHOOL LAW.

In response to a request for a brief outline of the history of the public schools of Montana since the organization of the system, Mr. Hedges supplies the following:

Our organic act was approved May 26, 1864. The first legislative assembly con-

vened December 12 of that year, and passed "An act establishing a common school system for the Territory," which was approved February 7, 1865. The only school officers provided for were county superintendents, elected for three years, whose duty it was to divide their counties into districts, examine teachers, visit the schools, recommend a good and uniform system of text books, make out annual reports, to be filed in their offices, and published in some newspaper if convenient, to apportion the school fund, and draw orders for the same on the county treasurer in favor of the clerks of the district.

The district officers were to consist of three directors, one chosen each year, and a clerk, who was also to be district treasurer. These directors were authorized to assess a tax upon the residents of the district for the purpose of building school-houses, but not till after an effort had been made to secure the amount by private subscription. This law was so loosely drawn that it was set aside as insufficient to authorize a legal tax. The only fund provided by law for payment of teachers was a county tax of one mill, and certain fines. The residue was to be made up by rate bills.

The law was very brief, and altogether inadequate for its professed purpose. The salary of county superintendents was fixed at $100, and might be increased to $300; but for all above $200 one-half was to come out of the school fund. The limits of school age were fixed at from 4 to 21 years. This law continued in force down to 1872.

TERRITORIAL SUPERINTENDENCY.

In 1866 the office of territorial superintendent of public instruction was provided for by a separate bill, and we find the names of Peter Ronan and A. M. S. Carpenter mentioned as holding the office, but there is nothing to show that either ever qualified or performed any official acts. In the same year, 1866, Rev. Thomas F. Campbell was appointed and qualified; he discharged the duties of the office down to 1869. In November, 1868, he published an official report, the only one that has come to our knowledge prior to the first biennial report of the present superintendent, published in 1874. Only 4 counties are mentioned as having reported in 1868. In these there were then 25 organized districts and 1,359 children of school age, about half of whom are reported as having attended school. The entire school fund from all sources for that year is given at about twelve thousand dollars.

There does not seem to have been any acting superintendent after the departure of Mr. Campbell, in 1869, down to the adoption of the new school law, to be mentioned below. Rev. S. G. Lathrop was appointed, but not confirmed, and does not appear to have actively discharged any of the duties of the office.

SECOND GENERAL SCHOOL LAW.

The new school law, adopted as above stated, was approved January 12, 1872. It was mainly modelled after that of California, with portions omitted that seemed too cumbersome for smaller and more scattered communities, and too expensive for the scantier resources of a young Territory.

This law is a vast improvement on the earlier one, and for the first time gave something like a complete system, recognizing fully the duty of the property of the commonwealth to provide for the education of all without resort to rate bills. It is made the duty of the county courts to levy a county tax of three to five mills upon all the property of the county. This is collected as are other county taxes, and remains in the county treasury. It is apportioned by the county superintendent, but not, as under the old law, drawn by the district clerks and frequently lost. It is only drawn out in payment of teachers' wages on orders drawn by the district trustees, countersigned by the clerk. The several districts are amply empowered to levy special taxes for building school-houses or extending their school term after the public money is exhausted. Every district must keep a school three months at least to be entitled to a share of the public money.

The system of supervision and accountability is well provided for; and the rapid growth of the schools, not only in number but in excellence, is the best possible commentary on the wisdom and improved character of the law.

RESULTS.

The present superintendent was appointed almost immediately after the new law went into effect, nearly five years ago. His first biennial report was made in December, 1873, at which date there were 91 organized school districts, a school population of 3,517, and an average attendance of 50 per cent. The school revenue had increased from $12,000 to $33,000, and the value of school-houses from nothing to $21,192.

Two years later, December, 1875, when the second biennial report was rendered, although these years were not prosperous for the Territory, the organized districts had increased to 96 and the school population to 3,837, while the attendance had increased 8 per cent. Although the school revenue had fallen off about twelve hundred dollars, the value of school-houses had doubled, and in many respects the character of the schools had improved.

Another year has since elapsed, during which substantial progress has been maintained, although the general interests of the Territory have suffered more than in any previous year. Helena City has now a graded school that will compare favorably with the best in any eastern State or city. The school occupies a fine brick building, furnished with the latest improved desks, 7 department rooms besides an assembly room, a corps of 8 teachers, and an average daily attendance of 350 scholars. Deer Lodge and Virginia City are doing as well in proportion, and other places are but little behind.

It was at first feared that the people would not accept public schools, to be sustained by a tax on property, without murmuring and dissatisfaction; but, so far from these fears being realized, there has been everywhere a readiness to bear even heavier burdens in order to secure greater school facilities.

There is a defect in the present system of granting teachers' certificates by county superintendents alone, each of whom is a law unto himself. But this will probably be remedied. A still greater defect is the subdivision of districts, which necessitates a reduction of the school term to the minimum of 3 months. Time may remedy this also. With the return of prosperity and the completion of railroad connections, facilitating immigration and the development of our natural resources, it will not be difficult to raise the minimum school term up to 6 months.

The school lands promised by the Government lie idle still, open to waste, yielding nothing to any one. If only some revenue could be derived from them in these days of our greatest weakness and necessity, it would do more good at the most vital point in our development than it can at any time hereafter.

ELEMENTARY INSTRUCTION.

PROGRESS OF THE SCHOOLS.

Notwithstanding a reduction of the number of the voting population during several years past, the number of persons of school age has been steadily increasing.

The number of school-houses is also increasing, and the character and condition of those in use have very greatly improved.

The percentage of attendance, too, improves, and although the number returned as not attending any school seems greater than it has been, it is very largely made up of those who have not reached, or have already passed, the usual age of attending school. This will probably continue to be the case as long as the school age covers so wide a range as from 4 to 21 years, because of the difficulty of sending young children to distant schools in an unsettled region, and the equal difficulty of keeping older ones from profitable work.

There has been a large reduction in the number of pupils attending private schools. This occurred mostly in Lewis and Clarke County, where the advantages of the public schools have been improved and inducements to attend them have proportionately increased.—(Territorial report, 1875–'76, p. 9.)

LENGTH OF SCHOOL TERM.

The superintendent urges the importance of increasing the length of the school term to at least six months. He says it is as important to have the term long enough to do some good as it is to have any public schools. If the length of the term were doubled, the expenses would not be increased one-third, while the advantages would be quadrupled. One principal reason why teachers' pay is so high here is that their employment is so brief and uncertain. It is necessary that they receive enough for the time employed to support them during the year. When anything like steady employment can be offered, the immediate effect will be to reduce the monthly rate of wages. If to the amount thus saved be added the amounts now expended in sustaining private schools or extending terms of public schools by private subscription, the sum will be found equal to what would be needed to make up the 6 months' term.—(Territorial report, 1875–'76, p. 10.)

TRAINING OF TEACHERS.

PROPOSED NORMAL CLASSES.

No provisions have as yet been made in the Territory for securing a supply of competent teachers. The payment of sufficient wages to allure them from other places may partially suffice for a time; but they come with diverse training from communities where different systems and standards of excellence exist, and introduce into the schools of the Territory the same diversities of discipline and instruction. The superintendent suggests the plan of forming normal classes in connection with some of the principal high schools, and says that in Helena, Deer Lodge, and Virginia City such a beginning might be made with much promise of success.—(Territorial report, 1875–'76, pp. 11, 12.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

From the report for 1875-'76 of the territorial superintendent, p. 12, it appears that there are public high schools in Helena, Deer Lodge, and Virginia City, and possibly there may be some in other places; but no statistics respecting any of them are given.

LIST OF SCHOOL OFFICIALS IN MONTANA.

Hon. CORNELIUS HEDGES, *territorial superintendent of public instruction, Helena.*

COUNTY SUPERINTENDENTS.

NEW MEXICO.

GENERAL EDUCATIONAL CONDITION.

LETTER FROM SECRETARY RITCH.

In the absence of any report of education in New Mexico for the year 1875-'76, the following for the previous year, used in the report of this Office for 1875, is reproduced; it is preceded by certain modifying statements for 1875-'76 furnished by Hon. W. G. Ritch, secretary of the Territory and ex officio superintendent of schools. Secretary Ritch writes under date of March 28, 1877:

"A school report such as I have given heretofore would add nothing of special interest. The figures for Socorro County, not given for 1875, have been given me for 1876, and show 17 Spanish schools, with a reported attendance of 834. Teachers' wages, $15 to $40, and an average of 3 months' schooling in primary branches.

"Doña Aña, not fully reported last year, has 3 private English schools, with 5 teachers and 150 pupils attending; term, 10 months; 10 public schools—9 Spanish, 1 English; average attendance, 300; teachers' wages, from $10 to $40 per month; and 8 months' schooling in primary branches.

"In San Miguel County, as reported to me by a former member of the school board, in consequence of the interference of priests, the public schools generally have been discontinued. The absence of school books, especially uniform school books, and competent teachers are among the greatest obstacles to anything like satisfactory schools.

"An additional school-house and school have been added in Santa Fé County; 2 private schools additional; English attendance, 35.

"There were 8 schools in Colfax County in 1876, against 7 in 1875, the statistics of the former ones being about the same. There are also, I understand, 3 schools in Lincoln, say 2 English and 1 Spanish.

"The balance of the counties may be set down as without material change from 1875."

County.	Number of public schools.	Number of children in attendance.	Number of teachers.	Average wages per month for teachers.	Number of months school was taught.	Languages taught—English or Spanish. (Biennial report for 1874–75 of Hon. O. H. Riggs, territorial superintendent of district schools, and special returns to the United States Bureau of Education for 1875–'76.)

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITIES.

Sketch by Territorial Superintendent O. H. Riggs, 1876, appended to report for 1874–'75; Laws of Utah, and reports to the United States Bureau of Education.

BEGINNINGS.

Salt Lake Valley was settled by Brigham Young with his first band of pioneers July, 1847. A provisional government was organized as soon as the main body of the Mormon people were established in their new homes, and a territorial one was granted by the United States September 9, 1850. February 28, of the latter year, the provisional government had passed an act to incorporate the University of Deseret, which act was ratified by the legislative assembly of the Territory October 4, 1851. At the first meeting of the regents of the university, March 13, 1850, a committee was appointed to select, in connection with the governor, a site for its buildings and locations for primary schools, implying an idea that the university was as heading the common schools invested with some authority over them. A further implication of the same idea was presented in the fact that in November following its incorporation the preparatory department of the university was opened under the title of the "parent school." The legislature of the Territory seems to have sanctioned this conception by passing an act approved October 4, 1851, to authorize the chancellor and board of regents to appoint a superintendent of primary schools, to be under its supervision and control. Such a superintendent was appointed, but reports from him are wanting.

December 11, 1854, Governor Brigham Young called the attention of the legislature to the need of more and longer district schools wherein every child might find admittance, as well as schools of higher grade in all the principal towns. Following this came, December 30, what appears to have been the first general school law. This provided for the division of the counties into suitable school districts under the direction of the county courts; for the election in each district of 3 school trustees; for boards of examiners in counties, to be appointed by the county courts; and for a territorial superintendent of common schools, to be appointed, as before, by the chancellor and regents of the university. The schools were to be sustained by district taxes levied by the trustees, at such rates as should be determined on by the district meeting. Teachers for them were to be examined by the county boards, and these boards, from the returns made to them, were to make annual report to the territorial superintendent and he to the board of regents of the number and condition of the common schools. The foundations of a school system for the Territory were thus laid.

MODIFICATIONS.

In 1865 there was an act to consolidate and amend the school law. This was repealed January 19, 1866, by another that continued the 3 trustees of districts and distinctly defined their powers and duties; it also continued the county boards of examiners and the territorial superintendent, but provided for the election of this last officer annually by the legislature, instead of his appointment, as previously, by the regents. County superintendents, to be elected by the people every two years, were added to the other school officers. The sustenance of the schools by a district tax of 1 per cent. per annum was provided for, while for building and repairing school-houses a district tax of from one-fourth of 1 per cent. to 3 per cent. was allowed on the consent of the voters of the district. Certain funds due from corporations are referred to as to be added to the school funds, but it is not specifically said what corporations or what amounts.

An act of February 21, 1868, defined common schools to be such as were or should be organized by the direction of the boards of trustees in the respective school districts, and under the supervision of said trustees; but forbade such a construction of this as should give any portion of the public school funds to any private or other school not under the control and direction of these trustees.

An act of February 20, 1874, required from county superintendents a yearly report of the number of children between 4 and 16 years of age in every district of their counties, and from the territorial superintendent a yearly distribution of the school money to the districts in the proportion of such population thus reported to him. Schools were also required to be kept in the districts at least 3 months in each year, as a condition of receiving the district's share of the moneys thus distributed, which amounted in the whole to $15,000 annually from the territorial treasury. This appropriation and the conditions precedent to an enjoyment of its benefits are said to have produced an excellent effect.

February 18, 1876, came another act amendatory and in place of all preceding ones, respecting schools. This continued the various school offices, but provided for the election of the territorial superintendent as well as the other superintendents by the people, the courts being still left to appoint the county boards of examination. The title of the territorial superintendent was also changed to superintendent of the district schools, the terms common schools and public schools being discarded. For the support of the school system $25,000 annually, instead of the preceding $15,000, were ordered to be distributed—$20,000 to the district schools and $5,000 to the university, on condition of its instructing annually, free of charge for tuition, books, and apparatus, 40 pupils in a normal department; these pupils to be selected by the territorial superintendent from persons nominated by the county superintendents, and each to sign an

obligation to teach one year in the district schools in return for the one year's free tuition, if required to do so. The proceeds of a tax on railroads were also added to the funds for distribution for the benefit of schools.

FRUITS GATHERED.

The earliest territorial report available is that for 1869, which showed 189 school districts, 243 schools, and 15,100 enrolled out of 24,138 children of school age; average attendance 10,618, reaching 44 per cent. of the school population. The expenditure for teachers' wages had been $79,679.62, of which $7,011.33 seems to have come from the territorial treasury, while $35,142.70 had been raised for building school-houses. In 1873 the districts had reached 202; the schools, 251; the school population, 27,725; the enrolment, 16,070; the average attendance, 11,842; the expenditure for teachers' wages, $82,895.91; the proportion of this from public taxes, $12,885.41; the sum for building purposes, $44,582.22. In 1876, as the preceding summary of statistics shows, there were reported 310 schools, with an enrolment of 19,886 pupils, and an average attendance of 13,608 out of 30,900 children of school age, the expenditure on teachers and superintendents being $90,217, and on buildings and furniture $39,081—a gratifying showing for a particularly bad year.

The university goes forward, but with only preparatory and normal students thus far.

SUPERINTENDENTS.

The territorial superintendents appointed by the chancellor and regents of the university were Elias Smith, 1852-'56; William Willes, 1856-'62; Robert L. Campbell, 1862-'66, when, under the law of that year, he was chosen again by the legislature and served till 1874. In that year Mr. O. H. Riggs was chosen by the legislature to succeed him, and, under the law for election of the superintendent by the people, seems to have been again elected to a second term in 1876.

ELEMENTARY INSTRUCTION.

LACK OF REPORT.

As the reports of the territorial superintendent are prepared for the meetings of the legislature, which are biennial, that for 1874-'75 is the latest issued. Consequently the statistical summary before given affords the only information respecting elementary instruction to be looked for before the session of 1878.

PRIVATE AND CHURCH SCHOOLS.

In the historical sketch appended to his report for 1874-'75, but prepared in 1876, Superintendent Riggs says that "there are many private and select schools established in different portions of the Territory." Of the mission or church schools he says: "The Catholics have one school, St. Mary's Seminary, in Salt Lake City. The Episcopalians have 3, St. Mark's Seminary, Salt Lake City, one in Ogden, and one in Logan. The Methodists have 6, the Rocky Mountain Seminary, Salt Lake City, and a school each at Ogden, Tooele City, Provo, Nephi, and Beaver. The Presbyterians have 3, the Salt Lake Collegiate Institute, Salt Lake City, the Wasatch Academy at Mount Pleasant, and a school at Bingham. There are about 1,250 pupils in these 13 schools, being nearly one-tenth of the number attending the common schools." It may be mentioned, in addition, that the upper classes in these institutions are engaged in a higher range of studies than has yet been reached in the "district schools."

TRAINING OF TEACHERS.

NORMAL DEPARTMENT IN THE UNIVERSITY.

A "department of instruction" has been opened in connection with the University of Deseret, for the purpose of giving special training to such students as may design to teach in the common schools of this Territory. Representative students will be admitted to this department free of tuition, and each one, on entering, will be required to present a certificate from the school superintendent of the county from which he is sent, indicating that he has been chosen by the proper authorities. He must also pledge himself to teach at least a year in the common schools of the county to which he belongs; and if he fail to teach thus will be required to refund to the county court the amount paid for his tuition.

On entering the department, students must have some knowledge of grammar, geography, arithmetic, reading, writing, and spelling. The course of instruction, running through 2 semesters and 4 terms, includes orthography, arithmetic, grammar, political economy, zoölogy, mental philosophy, physiology, geography, civil government, rhetoric, elocution, United States history, and theory and practice of teaching.—(Circular.)

SECONDARY INSTRUCTION.

ACADEMIES AND OTHER SCHOOLS.

The Brigham Young Academy, at Provo, a branch of the territorial university, was opened on the 3d of January, 1876, and soon secured 70 students. No subsequent report has been received from it. The university itself affords, in its preparatory and commercial departments, such instruction as is usually given in academies and secondary schools. In 8 of the private and church schools before spoken of as having secondary classes there are reported for 1876 a total of 36 teachers and 1,365 pupils, of whom 56 were in classical courses, 35 in modern languages, 75 preparing for a classical course in college, and 89 for a scientific course. Drawing is taught in 3 of these schools, vocal music in 6 and instrumental in 3. Two report chemical laboratories, and the same number philosophical apparatus, while 6 have libraries of 100 to 600 volumes.—(Report of Superintendent Riggs and returns to Bureau of Education.)

Statistics of the University of Deseret, 1876.

* The school age is given in the printed report for 1874–'75 as 4 to 21.

(Report for 1874–'75 of Hon. John P. Judson, territorial superintendent of schools, and special return for 1875–'76.)

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITIES.

Laws of Washington Territory from 1854, with organic act of March 2, 1853, and congressional enactment approved July 7, 1854.

FIRST GENERAL SCHOOL LAW.

Washington, previously a part of Oregon, was organized as a separate Territory under an act of Congress approved March 2, 1853, which made the reservation of the 16th and 36th sections in every surveyed township for common schools.*

At the first session of the territorial legislature, April 12, 1854, an act to establish a common school system for the Territory was matured and passed. It devoted to the public schools the interest of the fund to be formed from sale of the school lands, with an annual tax of 2 mills on the dollar of all taxable property, and the proceeds of all fines for breach of penal laws, these funds to be distributed annually among the school

*A further act of July 7, 1854, reserved for Washington, as well as Oregon, two townships of land of 36 sections each, to be selected in legal subdivisions, for university purposes, under direction of the legislature.

districts, in the proportion of the number of children of school age (then 4–21) in each, for the support of common schools and for no other purpose whatever.

For supervision of these schools there were to be county superintendents chosen by the people every 3 years, who should divide their counties into school districts, examine teachers for the schools to be taught in these, visit such schools at least once in every year, receive reports of them from the district officers, and make an abstract of these reports for filing in their offices and for publication in some newspaper of the Territory. They were also to see to the collection of the county school moneys and to the apportionment of these and other moneys for the schools among the districts complying with the conditions of the law. These conditions were: (1) That they should have organized by electing 3 district directors for visitation of schools and general care of school interests, with a district clerk for keeping of records, collection and care of school funds, taking of school census, and report of this to the county superintendent. (2) That they should have reported the school population annually 20 days before the first Friday in November. (3) That they should have raised by tax, or otherwise, an amount equal to their share of the county apportionment for building school-houses and supporting schools. (4) That they should have kept a school, with a qualified teacher, for at least a three months' term. The districts failing to meet these conditions were not only to have their school money for the year withheld, but after 2 years' failure were to lose it wholly and have it returned to the general county fund for distribution among complying districts. The schools sustained by these public funds were, from the first, to be open and free to all children of school age in the districts where they were taught.

SECOND GENERAL SCHOOL LAW.

November 29, 1871, another law was approved, to take effect January 1, 1872. This raised the annual tax for schools to 4 mills on the dollar; continued the school officers before mentioned, but made the term of county superintendents 2 years instead of 3; provided for the choice by the legislature* of a territorial superintendent, to hold office for 2 years, with the usual duties and with a salary of $300; gave districts power to levy taxes for school purposes additional to the 4-mill tax; exempted weak districts for two years from the operation of the above mentioned conditions of the old law, and required parents and guardians to send to school for at least three months in each year any child or children between the ages of 8 and 16 years under penalty of $100. Seventy-two days of school were made a quarter.

THIRD GENERAL SCHOOL LAW.

A law approved November 14, 1873, repealing all preceding acts in relation to common schools, made only the changes following: (1) Made the previously absolute tax of 4 mills one "not more than 4 mills." (2) Cut down the school quarter from 72 to 60 days. (3) Restricted the power of district meetings to levy a district tax, "for any purpose whatever connected with and for the benefit of schools and promotion of education in the district," to "a tax not exceeding 10 mills on a dollar for the purpose of building and repairing school-houses;" to which, however, might be added, as before, 5 per cent. for district clerk. (4) Required voters in districts to be taxpayers, as well as residents, and (5) omitted the compulsory feature of the former law.

REPORTS OF SCHOOLS.

The first territorial school report, covering the years 1871–'72 and 1872–'73, gave the following summary of the condition of the school system in the latter year: School districts, 248; school-houses, 189; schools, 196; persons of school age, (4–21,) 9,949; attending school, 5,928; amount paid teachers, $44,007.94. Statistics for 1875–'76 indicate 321 districts, 219 school rooms, 11,000 persons of school age, 7,500 enrolled in schools, and $54,720 as the amount paid teachers.

SUPERINTENDENTS.

The only territorial superintendents since the passage of the law creating the office have been Rev. Nelson Rounds, D. D., 1872–'74, and Dr. John P. Judson, 1874–'76. A letter from Dr. Judson, written after the commencement of a second term, indicated that he had been reëlected for the years 1876 and 1877, as he was still in the discharge of the duties of his office.

ELEMENTARY INSTRUCTION.

LETTER FROM THE TERRITORIAL SUPERINTENDENT.

A letter from Superintendent Judson, accompanying his special return of statistics for 1875–'76, says:

"The return I make herewith to your schedule of inquiries is very imperfect, owing

*This is the provision of both this and the following law, but an article from a respected correspondent of this Bureau in the Territory in January, 1876, states that "by special act of Congress" the territorial superintendent "is now appointed by the governor and confirmed by the council."

to the fact that county superintendents have failed to send in their reports. It is the general complaint among county superintendents that they cannot get the clerks of school districts to report. Friends of education have been working hard to secure the passage of a new school law, compelling clerks, under a penalty, to report to county superintendents.

"I have called a convention of teachers and superintendents to meet on June 6, 1877, for the purpose of taking steps to secure the passage of a better school law. Much interest is taken in education. New school-houses are being built and new districts are daily forming, but owing to the carelessness of school officers I have no reports showing the extent of the improvements made."

SECONDARY INSTRUCTION.

THE UNIVERSITY PREPARATORY SCHOOL, SEATTLE.

The University of Washington Territory has not yet been able to form collegiate classes. In a return for 1876 it reports 3 male instructors and 1 female, with 24 pupils, 10 male and 14 female.

SUPERIOR INSTRUCTION.

HOLY ANGELS' COLLEGE.

This institution, which reported 3 instructors and 56 collegiate students in 1875, presents no statistics for 1876.

WYOMING.

HISTORICAL SKETCH OF THE TERRITORIAL SCHOOL SYSTEM.

AUTHORITIES.

Organic act of July 25, 1868; Laws of the Territory from 1869; Reports of Territorial Superintendents.

FIRST SCHOOL LAW.

The organic act for establishing the Territory of Wyoming, approved July 25, 1868, reserved, as usual, the 16th and 36th sections in each township for public schools. The first legislative assembly of the Territory convened at Cheyenne October 12, 1869. An act of this assembly, approved December 10 of that year, provided for the organization of school districts and of schools, and for territorial, county, and district officers to look after these. The territorial auditor was made ex officio superintendent of public instruction for the Territory, with general supervision of all the district schools, and with the duty of seeing that the school system should be as early as practicable put into uniform operation. County superintendents, eligible yearly, were charged with the usual duties of such officers. District boards were to consist of a director, clerk, and treasurer for care of schools, keeping of records, custody of school funds, appointment of teachers, and annual report of everything relating to the schools. The schools were to be visited by the county superintendents at least twice in each term, were to be free to residents in the district 5 to 21 years old, and were to be sustained from a county tax of not more than 2 mills on the dollar, from the interest on a permanent fund when formed, and from the proceeds of fines and forfeitures, the building of school-houses being provided for from a district tax. Separate schools for colored children might be provided where there were 15 or more such children in any school district. Schools of a higher grade than the ordinary common schools were also authorized, the question whether any such should be established being left to be decided by the concurrent action of the county superintendent and district boards.

SUBSEQUENT LEGISLATION.

An act of December 14, 1871, abolished the territorial superintendency and required county superintendents to report annually to the governor, but made no other change.

A law of December 12, 1873, amended at some points by one of December 11, 1875, renewed the territorial superintendency, giving the duties of the office to the territorial librarian; required county superintendents to report to him by the first Monday in October of each year an abstract of the reports received from districts; continued the district boards, consisting of a director, treasurer, and clerk, assigning them terms of 3 years, one member to be changed by election each year; made the county tax for schools absolutely 2 mills on the dollar, instead of "not more than 2 mills," and allowed districts, as before, to tax themselves for a school-house fund, reserving all other school moneys for a teachers' fund to be applied only in payment of the wages of school teachers in the district. No distinction in such payment was to be made on account of sex in case of persons equally qualified. So far as known this is the latest general legislation in respect to schools. The main features of the former law are retained in it, with the exceptions above noted.

SUPERINTENDENTS.

The only territorial superintendents thus far have been the Hon. J. H. Hayford, who as territorial auditor became ex officio superintendent of public instruction under the law of 1869, continuing to December, 1871, and Hon. John Slaughter, who as territorial librarian became superintendent under the law of 1873.

EDUCATIONAL CONVENTIONS AND ASSOCIATIONS.

NATIONAL EDUCATIONAL ASSOCIATION.

The National Educational Association met in Baltimore July 10, 1876, and continued its sessions through the 11th and 12th. Although the attendance was not very large, and the heat of those three days was most oppressive, the meeting was one of great interest and importance. The ability and variety of the papers and addresses made up for the discomfort of the circumstances, while the presence of distinguished foreigners added much to the interest of the occasion.

The proceedings of the General Association opened with addresses of welcome from his excellency Governor John Lee Carroll and his honor F. C. Latrobe, the mayor of the city. The president of the association, Principal W. F. Phelps, of the Winona State normal school, Minnesota, then followed with his inaugural address. The other addresses and papers presented before the general association were as follows: "The demands of the coming century on the American common school," by Rev. A. D. Mayo, of Springfield, Mass.; "The country school problem," by Prof. Edward Olney, of the University of Michigan; "The moral element in primary education," by Hon. W. H. Ruffner, of Virginia; "Education in Brazil," by Dr. Da Motta, Centennial commissioner from that country; "Education in Sweden," by Dr. Meyerberg, of Stockholm; "The normal schools of the United States: Their past, present, and future," by Dr. Richard Edwards, of Illinois; "A course of study from primary school to university," an important paper read by Dr. W. T. Harris, of St. Louis, as the report of a committee appointed the preceding year; "Education in Japan," by Dr. David Murray, of the department of education in that country; "Newspapers in Japan," by Hon. Fujimaro Tanaka, vice-ministcr of instruction in Japan; "Education in the Argentine Confederation," by Señor Dorna, minister of education from that republic; and "The lacks and needs of the South educationally," by Mr. Alex. Hogg, of Auburn, Alabama.

Before the department of higher instruction the following papers and addresses were presented, or at least, according to the programme, were prepared for presentation, though possibly not all were really read to the meeting: "A notice of the history of the South Carolina College," by Prof. W. J. Rivers, of Washington College, Maryland; "The political economy of higher and technical education," by Hon. H. A. M. Henderson, supcrintendent of public instruction in Kentucky; "The position of the modern languages in higher education," by Prof. Edward S. Joynes, of Vanderbilt University; "Position of modern mathematical theories in our higher course of mathematics," by Prof. Wm. M. Thornton, of the University of Virginia; "Phonetic reform," by Rev. E. Jones, of Liverpool, England; "The study of the Anglo-Saxon language and literature," by Dr. J. M. Garnett, of St. John's College; and "The terms Anglo-Saxon and English," by Prof. Henry E. Shepherd, superintendent of public schools in Baltimore.

The department of normal schools listened to the following addresses and papers: "Centennial thoughts on normal schools," by the president of the department, Dr. Edward Brooks, of Millersville, Pa.; "What is a school?" &c., by Dr. J. H. Hoose, of Cortland, N. Y.; "What may schools do to form right habits of thought and study in their pupils," by Prof. C. A. Morey, Winona, Minn.; "Personal and acquired gifts of teaching," by H. B. Buckham, Buffalo, N. Y.; "A professional course of study for normal schools," by John Ogden, of the Ohio Central Normal School, was not read on account of Mr. Ogden's absence.

Papers were presented to the department of elementary instruction as follows: "Characteristics of Fröbel's method," &c., by Mrs. John Kraus-Bœlte, of New York, and "Esthetics of education," by Miss Minnie Swayze.

Before the industrial department were presented an address by its president, Prof. S. R. Thompson, of Nebraska; "The industrial education of women," by Hon. Ezra S. Carr, State superintendent of public instruction, California; "Instruction in manual arts in connection with scientific studies," by Prof. Manly Miles, of the Illinois Industrial University; "What can be done to secure a larger proportion of educated labor among our producing and manufacturing classes?" by Prof. Wm. C. Russel, of Cornell University; "What are the legitimate duties of an agricultural professor?" by Prof. E. M. Pendleton, of the University of Georgia; "Drawing as an element of advanced industrial education," by C. B. Stetson, of Boston, Mass., and "Required adjustments in scientific education, with especial reference to instrumental drawing as one of its elements," by S. Edward Warren, formerly of the Troy Polytechnic Institute.

At the meeting of the department of superintendence a resolution was passed in favor of holding an international educational congress in Philadelphia on the following Monday. It was also resolved to hold a meeting of the department in Washington, D. C., early in the coming winter.

Among other work of the association may be mentioned the adoption of resolutions relating to the United States Bureau of Education.

The following was moved by Dr. C. K. Nelson, of St. John's College, Annapolis, and its necessity argued at length by Rev. Alex. Shiras, D.D., of Washington, D. C.:

"*Resolved*, That a committee of seven members of the National Teachers' Association be appointed by the president, to proceed at once to Washington, and to use their best endeavors in behalf of the National Bureau of Education, which is now under consideration by committees of both houses of the Congress of the United States."

The following resolutions, presented by the chairman of the committee on resolutions, Hon. E. E. White, were also adopted:

"*Resolved*, That the National Bureau of Education, established by Congress, in response to the petition of this association, has more than met the expectation of the teachers of the United States.

"*Resolved*, That the publications issued by the Bureau have been instrumental in awakening a more general interest in the subject of universal education.

"*Resolved*, That as a connecting link between the various State systems of public schools, the Bureau is exerting an influence appreciated and acknowledged throughout the Union.

"*Resolved*, That no other department of the General Government (considering the small amount appropriated for its support) has done so much for the best interests of society.

"*Resolved*, That all the teachers and friends of education in the United States should generously aid the Commissioner of Education by promptly responding to all his calls for information, and by disseminating among the people the information furnished by the Bureau over which he presides."

A resolution offered by Major Rollins, of Missouri, expressing the sentiment of the association in favor of appropriating the proceeds of the public lands in aid of education, was also adopted.—(Report of the committee on publication, 1876.)

INTERNATIONAL EDUCATIONAL CONFERENCE.

This meeting was held July 17 and 18, 1876, in Philadelphia, on the Centennial grounds. After the opening prayer by Dr. Laws, president of the University of Missouri, Hon. John Eaton, National Commissioner of Education, read the following names of persons who were invited to act as officers of the conference: President: Sir Redmond Barry, of Australia; vice-presidents: Principal William F. Phelps, of Winona, Mich.; Hon. J. P. Wickersham, of Pennsylvania; Dr. Da Motta, Brazil; Dr. J. G. Hodgins, Ontario, Canada; Hon. F. Tanaka, Japan; Sir William Thompson, England; Professor Reuleaux, Germany; Señor G. Videla Dorna, Argentine Republic; Dr. Migerka, Austria; Hon. H. R. Hitchcock, Hawaii; Prof. É. Lavasseur, France; Professor Geiger, Switzerland, and Dr. Meyerberg, Sweden.

Sir Redmond Barry being absent, Professor Phelps presided. Hon. W. T. Harris, of St. Louis, discussed "Courses of study," confining his remarks to the report he had read at Baltimore the previous week. Dr. Da Motta gave a detailed description of the course of public instruction in Brazil. The subject was further discussed in short speeches by Mr. Hodgins, Mr. Meyerberg, and Dr. J. Hancock, of Ohio. They were followed by Mr. Hitchcock and Dr. David Murray, who respectively explained the school systems of Hawaii and Japan.

The evening session was occupied by statements from the representatives of different countries as to the preparation, status, salaries, and tenure of office of teachers. On the second day, Mr. Hodgins described the normal schools of Canada, and Señor Dorna described the schools of his country, stating that the national colleges of Buenos Ayres do not train teachers. C. J. Högman, of Finland, said that there are three normal schools in that country, in two of which the Swedish language is taught. His remarks, which were made in Swedish, were translated by Dr. Meyerberg. Mr. Wickersham explained why teachers in the United States are not provided with dwellings; the boards of education are disposed to change teachers often, and three-fourths of the teachers are unmarried. Dr. Meyerberg explained the school system of Sweden, and Dr. David Murray gave a detailed account of that of Japan, stating that there are 7 normal schools, and that a complete system of schools has spread within 4 years over Japan, so that now they number 30,000, with 2,000,000 of pupils, although education is not yet compulsory.

At the afternoon session, Mr. Hodgins spoke on pedagogical museums or cabinets. Dr. Seelhorst, director of the Nuremberg Museum, explained in detail the origin and character of the industrial museums of Germany. Dr. Migerka explained in detail the public school system of Austria. He said the only lady teachers in Austria, even in the girls' schools, are the teachers of needlework, but that in Germany many are found, some of them having control of the largest schools in Berlin.

At the closing session, the question of holding an international congress in connection with the proposed World's Fair to be held in Paris in 1878 was discussed, and

the United States Commissioner of Education was directed to open correspondence on the subject with European nations.—(Ohio Educational Monthly, September, 1876, pp. 293, 294.)

AMERICAN PHILOLOGICAL ASSOCIATION.

The annual meeting of the American Philological Association was held in New York City, July 20, 1876, when, notwithstanding the heat, some interesting work was done. Prof. Tracy Peck, of Cornell, showed plainly that there were wide differences in pronunciation among the Latins. Prof. W. D. Whitney opposed Max Müller's "botanico-philological" theory as to the changes in the words *fir*, *oak*, and *beech*.

The report of the committee appointed at the session of the previous year to consider a reformed orthography for the English language was presented by Professor Whitney. Among other propositions and recommendations this report contained the following: (1) The true and the sole office of alphabetical writing is faithfully and intelligibly to represent spoken speech, so called historical orthography being only a concession to the weakness of prejudice. (2) The ideal of an alphabet is that every sound should have its own unvarying sign and every sign its own unvarying sound. Further, it was declared that the first step toward securing a reform in English spelling is to break down, by the combined influence of enlightened scholars and of practical educators, the immense and stubborn prejudice which regards the established modes of spelling almost as constituting the language, and as having a sacred character in themselves preferable to others.

A varied and interesting discussion followed the acceptance of the report. It was opened by Mr. E. Jones, of Liverpool, who recommended that, in place of the adoption of new letters, the best possible use should be made of the alphabet now in vogue. Mr. S. P. Andrews also recommended the improvement of spelling upon the basis of the Roman alphabet, thus avoiding the necessity of introducing new types.

A convention of educators was appointed, to be held at Philadelphia, August 14, 15, and 16, to consider how best to give effect to the above resolutions.

E. Jones, of Liverpool, England, read a paper on the spelling reform, which, with the report, was discussed by Professors Whitney, Haldeman, March, Wightman, and many others. The conclusion reached was that reform must be slow, and be begun in the public schools and with the rising generation. The next paper, on "The alphabet as a means to an end," was by Prof. William C. Sawyer, of Appleton, Wis. He pointed out the defects of our alphabet, and said that it is a disgrace to our civilization to continue our patronage of it. This paper was followed by one on "Phonetic reform," by James W. Shearer, of Liberty Corner, N. J. Dr. J. B. Bittinger, of Sewickly, Pa., read a paper on "What Shakespeare knew of horsemanship," and Prof. Fisk P. Brewer, of the University of South Carolina, read a paper on section 262 of Demosthenes' "De Corona." Hebrew etymology was discussed at length by Prof. Cranford H. Toy, of the theological seminary at Greenville, S. C., and Professor March made some remarks upon No. 328 of the Codex Diplomaticus Anglo-Saxonum. Papers were also read by Dr. J. Hammond Turnbull, of Hartford, Conn., Professor March, and Prof. Milton M. Humphreys, of Lexington, Va.—(New-England Journal of Education, August 12, 1876, p. 55; School Bulletin, August, 1876, p. 185; Ohio Educational Monthly, September, 1876, pp. 295–297.)

ORTHOGRAPHIC CONVENTION.

The convention for the revision of English orthography met, as arranged by the Philological Association, at the Atlas Hotel, West Philadelphia, August 15, 1876.

After the organization of the convention, and pertinent remarks by the president, Prof. S. S. Haldeman, an able and valuable address was delivered by Prof. F. A. March, of Lafayette College, Pennsylvania, in which the history of alphabetic symbolization was adverted to, also the confusion therein caused by the Norman conquest; and the need of some conventional phonic system argued. A very interesting and harmonious discussion followed, in which the principal speakers were Mr. E. Jones, of England; W. Duane, of Philadelphia; President Nelson, of Annapolis; Professor Parker, of Philadelphia; Rev. Mr. Robertson, missionary to the Creek Indians; and J. B. Lowe, of Hampton Institute, Virginia.

The resolutions reciting the need for a reform in spelling passed at the annual meeting of the American Philological Association, already noticed, were unanimously adopted.

After 4 days of session it was unanimously agreed that the time has come for a permanent organization, to take in hand the actual reform of English spelling. A constitution and set of by-laws were therefore adopted, officers elected, and committees appointed. The New-England Journal of Education gives the full text of the constitution of the new association, remarking that the matter promises to be our leading educational question for some time.

Prof. Francis A. March, LL.D., of Lafayette College, Pennsylvania, was elected president of the association. The vice-presidents elected were Prof. S. S. Haldeman,

LL.D., University of Pennsylvania; E. Jones, 35 Newstead Road, Liverpool, England; William T. Harris, superintendent of public schools, St. Louis, Mo.; Prof. William D. Whitney, Yale College, Connecticut; Prof. C. K. Nelson, Annapolis, Md.; and Mrs. E. P. Burns, 35 Park Row, New York City.

There is no fee for joining the association, and the annual dues are only one dollar, payable in advance. It was significant of the interest of those present at this meeting that many of the first names added to the roll were accompanied by ten dollar notes.

The annual meetings are to be appointed with special reference to the convenience of teachers in the long vacation, at points of interest, and special inducements are to be offered by the hotels and railroads.—(New-England Journal of Education, August 26, 1876, p. 79, and September 16, p. 115.)

AMERICAN SOCIAL SCIENCE ASSOCIATION.

The meeting of this association, held at Saratoga in September, 1876, is characterized by Scribner's Monthly as having been the nearest approach to what is called in England a "social science congress," that has ever been seen in the United States. Previous meetings, it is remarked, have generally lacked the homogeneous, coherent character which the experience and practice of 20 years have stamped upon the British conventions of this nature. Papers have been read and debates held occasionally in the presence of large audiences in these American social science meetings, but there has seldom been brought together such a company of trained and truly scientific investigators as met at Saratoga, ready to discuss, upon the instant, and often in a masterly way, the numerous questions coming up for consideration. At Saratoga, too, these professors and experts of social science met each other, not only in the debates, but at the hotel tables and in their hours of recreation, so that many topics could be leisurely and amicably debated, with mutual enlightenment. The result was that after four days spent in this manner, (during which more than 40 addresses and papers were presented and more than 100 persons took part in the discussions,) the members separated with a strong feeling of satisfaction, as if something had really been accomplished of national importance and concern, and, at the same time, with pleasure to those who participated in it. This was particularly true in regard to the professors and lawyers who carried on, for 3 days, the most searching and intelligent debates on legal education and admission to the bar ever held in America. Nearly all the more important law schools, except that of Cambridge, were represented, and eminent lawyers from New York, Cincinnati, St. Louis, Chicago, Baltimore, Washington, and other cities spoke on various topics of great importance. The papers read in this department of the association were by Chancellor Hammond of Iowa, Professor Dwight of New York, Professor von Holtzendorff of Munich, Mr. Mathile of Washington, Messrs. Lewis L. Delafield and Dorman B. Eaton of New York, and Judge Hoadley of Cincinnati. They dealt with the study of jurisprudence and political science, admission to the bar, election of judges, proper organization of law schools, &c.

Among the addresses delivered before the other departments of the association, are mentioned Mr. David A. Wells's opening address on "The causes and remedies of our financial depression;" Governor Tilden's short address to the conference of charities, with which the proceedings opened, and addresses by Dr. Allen, of Massachusetts, and Dr. Wilbur, of New York, on insanity. Papers were read in the conference of charities relating to neglected children, medical charities and out of door relief, immigration and pauperism, and hospital buildings. The health department, which was in session but one day, brought forward some useful papers on the health of schools and debated them ably. Dr. D. F. Lincoln, of Boston, secretary of the department of health in that city, was here one of the principal speakers.

The largest audiences attended what is called the "general session," in which papers not specially connected with any of the 5 departments of the association were brought forward, read, and debated. Here, therefore, the political and financial papers, and one or two specially relating to education, were considered. There were 4 chief debates in the general session on the following subjects: the silver question, the condition of the South, Chinese immigration, and the railroad question. These debates were all extremely animated and entertaining, without reaching any very definite conclusion, nor were they reported with any fulness; consequently, most of what was said was lost. Briefer discussion followed the paper of Mr. D. L. Harris on municipal extravagance, a striking presentation of the debt and expenses of city governments; also those on "The cotton industry of Fall River," "Life insurance," "Township organizations," "Technical education," "The civil service," "American currency," and others. On the closing day an impromptu debate on "Prison discipline" took place, apropos of a resolution which authorized the sending of delegates to the International Prison Congress at Stockholm, in August, 1877. Captain Harvey, governor of the Brixton Prison, in London, was present and gave an account of the prison system now used in England, and of the considerable decrease in punished crime which is taking place there. Later in the same day, Mr. Thomas Balch, of Philadelphia, gave a sketch of the Crédit Foncier of France, a financial institution which has grown up there within forty years, and has

proved of great service not only to individual borrowers and investors, but to the whole country in times of financial distress. The prevention of crime by moral and educational instrumentalities was zealously discussed in a paper by Mr. George T. Angell, of Boston, during one of the evening sessions, and the intimate connection between immigration and crime was considered in the conference of charities.

In this last named conference, which remained in session but 3 days, 6 States were officially represented — New York, Pennsylvania, Massachusetts, Rhode Island, Illinois, and Wisconsin — while Connecticut, New Jersey, and one or two other States were unofficially represented. The proceedings of this conference were more fully reported than any other part of the Saratoga meeting, and they were to be published at Albany by the secretary of the conference, Dr. C. S. Hoyt.

A week or two after the conference of charities adjourned a local convention of the same kind met at Lancaster, Pa., where the county officials of that State who have charge of the public poor assembled to debate questions very similar to those considered at Saratoga. This was the third meeting of the kind held during the year, the others having been convened in Michigan and in New York. Their frequency shows how much more urgent than formerly have become the questions which concern the poor, and the good results which attend such conventions are everywhere perceptible. The care of the poor is becoming more enlightened and systematic, and the States are learning of one another and entering into cordial relations with one another upon a mutual good understanding.—(Scribner's Monthly for December, 1876, pp. 277, 278.)

The congress above reported has called attention more pointedly than perhaps was ever done before to the kind of service which such an organization can render. It is a movable university, an impromptu parliament, a company of secular and volunteer apostles who in this age are capable of preaching and teaching much that the world should make haste to hear.

NEW ENGLAND ASSOCIATION OF SCHOOL SUPERINTENDENTS.

A semi-annual meeting of this association was held at Boston October 22, 1875, and another at the same place on May 26, 1876.

The attendance at the meeting in October was greater than at any previous one, and, for the first time, a lady appeared as a member. Hon. Warren Johnson, of Maine, discussed "Elements essential to a public school system;" Rev. Daniel Leach, of Rhode Island, "The ideal teacher;" A. P. Stone, of Springfield, Mass., "The need of reform in teaching geography." Dr. Sears gave an interesting account of his work in the South, in which he made the remarkable statement that the proportion of the liberally educated is greater in the South than it is in New England — a statement possibly correct, if the white population only be taken into the account.

At the meeting held in May, 1876, about 30 superintendents were present from the different States of New England. A paper was read by Francis W. Parker, of Quincy, Mass., giving a history of Prussian schools. The next was by Ephraim Hunt, of Portland, Me., his subject being the extent to which the calamities of the times are justly chargeable to our prevailing systems of education, since, as the writer claimed, they educate away from industry and habits of labor. The third and last paper was read by A. P. Stone, of Springfield, on the subject of teaching geography and the text books to be used.—(National Teacher, November, 1875, p. 472, and New-England Journal of Education, June 3, 1876, pp. 270, 271.)

ASSOCIATION OF THE REPRESENTATIVES OF AMERICAN MEDICAL COLLEGES.

A convention of representatives of medical colleges of the United States was held in Philadelphia June 2 and 3, 1876, in pursuance of a call issued in May of the same year. Representatives of 23 different colleges were present. Among other important business transacted the following resolutions were passed:

In respect to the length of course for a degree, it was —

"*Resolved*, That it is the opinion of this convention that no two consecutive sets of lecture tickets shall be regarded as fulfilling the usual prerequisites of instruction for graduation where the time between the beginning of the first course and the end of the second is less than 15 months."

The question of the advisability of adopting a graded course of study was met by the following:

"Whereas a knowledge of the elementary branches of medicine should precede a study of the practical branches,

"*Resolved*, That, in the hope of inducing students to prolong and systematize their studies, this convention recommends to all medical colleges to offer to students the option of 3 courses of lectures, after a plan similar to the following: Students who have attended two full courses of lectures on anatomy, chemistry, materia medica, and physiology may be examined upon any of these subjects at the end of their second course. During their third course, such students may devote themselves to the lectures upon the theory and practice of medicine, surgery, obstetrics, and diseases of women and children, upon which subjects only they shall be examined at the final examination

for the degree of M. D., their standing, however, to be determined by the results of both examinations."

It was also unanimously resolved that no degree in medicine should be conferred under any circumstances except after an examination in person of the candidate upon all the branches of medicine.—(Detroit Review of Medicine, July, 1876, pp. 500–504.)

INTERCOLLEGIATE LITERARY ASSOCIATION.

This association owes its origin to a suggestion by T. W. Higginson, in one of the magazines, that the establishment of intercollegiate scholarships would be a great inducement to higher education in this country. Popular education, he argued, has always been the chief object of praise in this country, but the universal desire to make money, and, in fact, the almost universal necessity of so doing, have prevented many promising young men from entering the fields of higher literary enterprise. It was held that intercollegiate scholarships, founded on intercollegiate examinations, would not only serve as a standard of measurement between colleges, would not only instil a desire for distinction in science and letters among undergraduates, but also would induce the best students in the colleges to devote their time after graduation to those departments of study which best suit their tastes. Colonel Higginson's suggestion met with general approbation. President McCosh, Chancellor Crosby, and others, approved of his views, and while the matter stood in this inchoate form before the college public the Intercollegiate Literary Association was founded. Three undergraduates at Princeton College and three at Williams College joined their names to a circular on the subject, addressed to the members of American colleges, calling a convention to meet at Hartford. About a dozen institutions responded. The question as to the admission of young women into the contests was wisely decided at the beginning by the six subscribers to the circular, they sending a copy of the invitation to Vassar College.

Colonel Higginson was present at the first convention and guided its proceedings. It was determined for the first year to have competitions in oratory and essays only. The object was to make the contests popular from the beginning, and this object could not have been attained if mathematics or the dead languages had first been introduced. The idea, also, was not to undertake too much, but by gradual advances to secure a permanent organization. It was deemed best for the first few years to offer such prizes as might be within the power of the association, and in the mean time to attempt to secure a permanent fund. The first contests in oratory and essays proved to be a great success. Many persons were interested in the undertaking. Mrs. Astor set a praiseworthy example by a generous gift, which has been twice renewed; while Mrs. John Taylor Johnston and Mr. Dwight H. Olmstead gave equally hearty and substantial support to the project. For the second year, examinations in Greek and in mathematics were added, and, while the contests in speaking and composition were again most successful, the additional competitions did not in the least fall behind them in this respect.

The annual contest for 1876 took place in January, at the Academy of Music, New York. The first prize in oratory was awarded to Julian M. Elliot, of Hamilton College; the second to D. J. Tompkins, of Cornell University. F. E. Heath, of Cornell University, was awarded a prize for an essay on "Dickens and Thackeray compared." A prize for the best essay on "Advantages and disadvantages of universal suffrage" was divided between Nelson S. Spencer, of the College of the City of New York, and F. A. Hills, of the Northwestern University, of Illinois. The prize of $100, offered by Mr. Gregory, of Marblehead, Mass., for the best essay on "Arbitration," was awarded to Wilbur Lawrence, of the College of the City of New York.

In mathematics, the first prize was awarded to George S. Palmer, of Cornell University, the second to G. B. Halstead, of Princeton College; and honorable mention was made of Thomas Craig, of Lafayette College.

In Greek, the first prize was awarded to Miss Julia J. Thomas, of Cornell University, the second to Henry Veghte, of Rutgers College; and honorable mention was made of H. E. Crosby, of the University of the City of New York.—(Schermerhorn's Monthly, February, 1876, and New York Tribune.)

NEW ENGLAND NORMAL MUSICAL INSTITUTE.

The third annual session of the New England Normal Musical Institute was held at East Greenwich, R. I., during July and August, under the direction of Dr. E. Tourjee, of the New England Conservatory of Music, Boston. The success of the Normal in its two previous years drew together a large representation from no less than 16 different States and the District of Columbia. The time was fully occupied with lectures, concerts, and lessons, and enough recreation among the many charming places of Narragansett Bay to make everything delightful.—(New-England Journal of Education, October 7, 1876.)

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The twenty-fifth meeting of the association was held in Buffalo, N. Y., beginning on Wednesday, August 23, 1876, and closing on the afternoon of the following Wednesday. Several peculiar circumstances united in making the meeting one of unusual interest. Among them may be mentioned the fact that the president, Hon. Sherman S. Rogers, who presided at the twenty-fifth meeting, also presided at the organization of the association in Philadelphia, September 20, 1848. The Centennial Exhibition at Philadelphia was also the means of securing the attendance of numerous foreign savants, in America as commissioners from various countries, who were most cordially welcomed to the association both by its officers and the citizens of Buffalo.

The attendance of members and citizens at the general and sectional sessions was larger than at several preceding meetings. Two hundred and fifteen names of members and foreign guests were entered on the register, while three hundred tickets were given out for the meeting.

One hundred and forty-seven papers were entered by title. Of these, nine were not considered by the standing committee for the lack of abstracts or from the titles being withdrawn by their authors; fourteen were rejected by the committee as being already published and for other reasons. Of the remainder, thirty-one were referred to section A, eighteen to the subsection of chemistry, nine to the subsection of microscopy, forty-six to section B, and twenty to the subsection of anthropology. The pecuniary condition of the association being such as to demand strict economy, it was determined by the standing committee to limit the size of the volume of Buffalo proceedings.

The organization of the permanent subsection of anthropology was an interesting and popular feature of the meeting, being well attended and maintained.

A permanent subsection of microscopy was organized, and though the sessions which it held were in great part devoted to perfecting its organization for future meetings, yet several papers were read and a general interest in the objects of the subsection awakened.

The permanent subsection of chemistry continued its organization with increased attendance and interest, and the able opening address of its chairman called and retained many attendants from the other sections.

The entomological club of the association held several meetings during the week, the first being on the afternoon before the association commenced. This club is annually increasing in favor with the entomologists, and calls many persons specially interested in this department to the meetings of the association. The bringing together once a year of persons interested in the many departments of science has always been one of the primary objects of the association, and it is to be hoped that the numerous associations and societies of kindred objects with this will realize the advantages to be gained by having one of their meetings held in connection with this association, and thus allow those who would enjoy meeting their colaborers at least once a year the opportunity of doing so at the least expense of time, and in connection with the liberal arrangements that are always made in behalf of the association by the citizens of the place of meeting.—(Proceedings of the association for 1876, pp. 341–343.)

SPECIAL ARTICLES.

THE STUDY OF ANGLO-SAXON.

F. A. MARCH, LL.D.,
Professor of the English Language and Comparative Philology in Lafayette College, at Easton, Pa.

It is strange that there should have been no more study of Anglo-Saxon, the mother of our mother tongue. There is talk enough about it. From the way our orators and critics dilate upon the glories of the Anglo-Saxon tongue, and the beauty and power of an Anglo-Saxon style, one would suppose that everybody studies it. But it is only within the last ten years that it has had any place in our common American college course. Latin and Greek were thought to be the proper languages to study, and there was no time found even for English. The course has now been widened, and there are many things to be said in favor of admitting the grandmother tongue.

THE CHARACTER OF THE LANGUAGE.

Anglo-Saxon is to be classed with inflected languages like Latin and Greek, rather than with analytic languages like French and English. It is, in fact, a sister speech with Latin and Greek, and shares with them the general constitution and family traits of the Parent Speech of the Indo-European languages. The noun has five cases, with four declensions growing out of the different stems; the adjective is declined in three genders and two numbers like the Latin, and also in a definite and an indefinite declension like the German; the personal pronouns have three numbers. The verb has six conjugations. The syntax is that of a highly inflected language. Some verbs govern the accusative case, others the genitive, the dative, the instrumental, or the accusative and dative, or accusative and genitive, or other combination. The uses of the modes and tenses are nicely distinguished; the subjunctive mode has its set of rules rivalling those of the Latin or Greek as apparatus for mental gymnastics. The order of the words is that of a Germanic inflected language, and needs to be changed in English. The rhythm of the poetry is measured by accents and alliteration. The sounds of the letters are carefully represented, and the relation between them and the sounds of analogous words in Latin and Greek and German is subject to definite rules. The Anglo-Saxons had popular poetry before their conversion to Christianity. Every one learned to sing their ballads. The harp passed round at feasts and each sang in turn. Most of what would have been their original literature was lost by coming under ban of the church and the contempt of the Normans; but we still have one heathen poem, Beowulf, and a number of Christian poems in the ballad epic style. There is a large body of prose, but most of it is translation or imitation of Latin works, and its interest is therefore mainly philological. There are many charters and other legal documents of much interest.

THE USES OF THIS STUDY.

Languages are studied for discipline, as a key to their books, as tools for further investigation, and as models or other aids in our own talking and writing.

The study of Anglo-Saxon will plainly give the same kind of discipline as that of Latin and Greek, so far as it depends on their being inflected languages, and on their giving an introduction to a new world of thought.

The knowledge of Anglo-Saxon is also valuable in itself; it is a record of mind in which all men have an interest. To special students of English history and of modern civilization it may be of special service in original investigations. In the old charters and records is still locked up much valuable material for making out the rise of the English constitution and the growth of English customs, and so the history of the Teutonic races. To original investigators in the science of language it also offers a most inviting field, and much aid to labor in other fields.

It is mainly, however, in its relation to our modern English that the study of Anglo-Saxon is important. The names of the objects which we speak of most and most warmly, of the actions and thoughts which stir the blood, the words and idioms around which move the dearest associations, and on which the beauty of our poetry and the power of eloquence, wit, and humor depend, are mainly Anglo-Saxon. The power to speak well springs from familiarity with choice idioms and synonymes, and this is to be attained by studying them in connection with the history of their origin and meanings, and by becoming familiar with the writings in which they are used with simplicity.

Almost all our grammatical forms are Anglo-Saxon. The difficulties of our language,

whether in spelling, in the irregular formation of modes and tenses, or of plurals or genders, or in the peculiar combinations of syntax, are almost all to be referred to Anglo-Saxon, and most of them are there easily understood; they are now difficult because they are relics of habits and forms which have passed away. *Took* is the past tense of *take, loved* of *love; took* is a contraction of a reduplicated perfect *ta-tak, loved* of an aorist compounded with *did* (*love-did*). *Sheep, deer, swine,* do not use the plural *s*; that was the regular way with all such neuters in Anglo-Saxon. *Men* is the plural of *man;* the change of *a* to *e* is a matter of euphony produced by a following *i,* which is now lost. *Methinks I see him* seems strange, but in Anglo-Saxon we learn that this *thinks* is a different verb from the common English *think,* and means *seem,* and governs a dative; *methinks* means *it seems to me. Be it so—be* is the old subjunctive used with the force of an imperative as in Latin, and having *it* for its subject. *He went a-hunting—a* is the old preposition *on.*

METHODS OF STUDY.

Languages are studied in many ways. French and German are often studied by repeating phrases, so as to learn to talk. French is often read in free translation, without knowing the modes and tenses or other grammatical forms, skipping the strange words and particles, and guessing at the general meaning of the sentences, very much as many of us read English. Latin and Greek are usually read more carefully. Students are expected to know the meanings of all the words, and observe the modes and tenses, cases, and the like. This is about all that is done in many colleges. But the best teachers attempt more. They try to master the author read. They dwell on the particles which show the connections of thought, the modes and tenses and synonyms, so as fully to get the thought, and they recreate the environment. This is called historical and esthetical study.

Then there is philological study. In a few of the best colleges, Latin and Greek are read with a careful scrutiny of every word in view of the modern science of language. The best students regularly look up the etymology of every word, and prepare for questions on its history and its relations to kindred words in other languages, the phonetic laws which govern the changes of form, the laws of thought which govern the changes of meaning, historical inferences to be drawn from it, and similar matters. They prepare for comparative syntax, to give the forms in other languages of expressing each relation of thought, and their history. This philological study may be turned more toward the past, to Greek and Sanskrit, or more toward the modern languages, to English, French, and German.

Nobody would study Anglo-Saxon to learn to speak it. The off-hand manner of reading has, however, been much used. President Jefferson thought that the old books were written in a rude form of colloquial English disguised by bad spelling, and that the supposed case endings, and the like, were figments, "aberrations," he says, "into which our great Anglo-Saxon leader, Dr. Hickes, has been seduced by too much regard to the structure of the Greek and Latin languages." He thought that after getting used to the bad spelling we could read Anglo-Saxon as easily as Burns's poems. He wished to have text books prepared with parallel columns, having the Anglo-Saxon in one and the words respelt into their modern English form in the other, with occasional notes explaining such words as have become wholly obsolete. With such an apparatus he thought a sufficient acquaintance with the language might be very easily and rapidly made. Wherever Anglo-Saxon study consists in putting a gospel in Anglo-Saxon into the hands of beginners, and reading it through in a few lessons, the method must be not unlike Mr. Jefferson's; and it is true that a good deal of very interesting and valuable knowledge of the language may be caught up in that way with little pains. It is, however, plainly desirable, if time can be spared, to use a more accurate and thorough method; and since the value of the study is greatest as the key to English grammar and the coloring for English style, it would seem that here more than with other languages it is desirable to use the philological method, and scrutinize word after word and phrase after phrase with minute attention, so that the relation of each to our modern English may be clearly understood. This thorough philological study also implies, for the full understanding of the Anglo-Saxon itself, a comparison with other languages, with Latin and Greek and Sanskrit, if the students know them, and with German, as its nearest of kin, if without the means of studying Gothic and Icelandic. Parallel paradigms of all these, and other languages, may, in fact, be found in a comparative grammar of the Anglo-Saxon, arranged for easy comparison and for careful examination where the history and meaning of Anglo-Saxon forms are doubtful.

THE TIME FOR THIS STUDY.

The best time to introduce Anglo-Saxon in the common classical course would seem to be after studying German, near the end of the hard work on Latin and Greek. This is, in most colleges, during the Junior year. The students will then be comparative grammarians of more or less skill in Latin and Greek, French and German, and will

make rapid progress in Anglo-Saxon. Four recitations a week for a single term will then count as much as a whole Freshman year. It may be well introduced in connection with the study of an English classic, Shakespeare, for example, or Chaucer, giving out a lesson in both for the same half day, under the same instructor, and making them mutually aid each other. The great difficulty in the way of valuable study of English is the fatal facility of extemporizing the recitations. The Anglo-Saxon, on the contrary, is hard to prepare, and needs the stimulus of interesting applications. In the earnest struggle for life now going on among the thick coming studies of our old classical courses, Anglo-Saxon can hope for little space.

Where there are scientific courses, so-called, from which Greek, or even Greek and Latin, are dropt to make way for modern languages, it would seem possible to secure time for the scientific study of our own tongue. And then it might be thought best to begin at the beginning, with Anglo-Saxon, and come down in the actual order of historic development, through the various stages of Old English. There would be obvious advantages in this method. There are other reasons for approaching it through the German. The class of students who take our scientific courses do so in large part because they dislike Greek and Latin, and do not see the use of studying them. They are likely to dislike Anglo-Saxon at first for similar reasons. The study is hard for them, and the interest to a great extent archæological. The thought is foreign, the environment strange. German is easier, is modern, has all sorts of uses and attractions. But German well taught is an introduction to Anglo-Saxon. It has retained the old Teutonic forms much better than English. Anglo-Saxon is much easier to a German than an Englishman. To an Englishman who has learned German it is very easy, and the philological study of it, which was so difficult, becomes simple and delightful. It is a truly practical as well as scientific procedure to have Anglo-Saxon taught by a professor of English and German literature, as it is at the Washington University at St. Louis. It is good to have some of it read, if there is plenty of time, in the early part of the course; but the real work should be put off, as in the classical course, till other languages have been studied.

Our universities which have a separate school of English language and literature, or a course of study in them running through three or four years, will naturally aim to give thorough philological training of the same kind and extent as that given in Latin or Greek.

NORMAL SCHOOLS.

No class of persons need to know Anglo-Saxon so much as teachers of English grammar. Teachers in our common schools, and much more in our high schools and academies, might use it with every lesson in grammar or language; and they are always in danger of being asked questions they cannot answer without knowing it. Pupils will ask whether *John's book* is a contraction of *John his book;* how comes *goose* to have *geese* for its plural, and *gander* for its masculine; how comes *lady* to be the feminine of *lord;* what does the *to* mean when you say *to err is human;* should we say *the sun sets* or *sits;* should we parse *I asked him a question* by supplying *to* before *him;* and so on without end. But such questions cannot be answered without knowing Anglo-Saxon. Ingenious teachers reason about them with infinite subtlety and no end, and demonstrate how they must be,—both ways; when a single look at an Anglo-Saxon sentence settles the matter. No teacher can safely decide such questions without knowing the old forms. No normal school ought to send out graduates from its grammar department wholly ignorant of Anglo-Saxon. A lesson a day during the last school term, skilfully directed to the examples in which this knowledge is oftenest called for, would perhaps answer the most pressing needs of the common school. A really good high school teacher ought to have had much more study.

ANGLO-SAXON IN AMERICA.

The history of this study in America has a little of the centennial interest. There was a revival of etymological study of English about a hundred years ago, when Dr. Johnson published his dictionary. He knew nothing of Anglo-Saxon, and his critics showed up his ignorance very fully. Horne Tooke, among others, was attracted to that field of study, and having original linguistic genius, and plenty of leisure in prison, prepared *The Diversions of Purley*, a book that proved an epoch-making work in this kind of study. He was a fierce opponent of the ministry who were making war in America, and had been imprisoned for saying that Americans were "*murdered*" by the king's troops at Lexington. He was regarded in this country as a martyr in the cause of our liberties, and his book was at once reprinted here, and read everywhere with peculiar interest. It bore fruit a hundredfold in the minds of Noah Webster and Thomas Jefferson. Jefferson sent to Europe for the old folios in which the knowledge of Anglo-Saxon was then buried, and read them, as he had time. He became strongly impressed with the thought that the language ought to be studied in our schools, and when he organized the University of Virginia he made it the duty of the professor of modern languages to give instruction in Anglo-Saxon. It has accord-

ingly been one of the regular studies there since 1825. Prof. George Blattermann, Ph. D., gave the first course of lectures, and continued them till 1840. Prof. Charles Kraitsir, Ph. D., gave them from 1841 to 1844. Prof. M. Schele De Vere, Ph. D., LL.D., has since filled this chair. During the earlier period, the lectures had been given, in pursuance of what was understood to be Mr. Jefferson's plan, merely as a means of imparting a knowledge of English; but Prof. Schele De Vere has given lectures on the science of language and the history of the changes from Anglo-Saxon to English, and has used his "Studies in English" as a text book. Students elect their studies at this university. Four hundred and ninety-eight (498) students have been in the classes since 1845, and the number who have taken Anglo-Saxon from the first is computed to be over 600. Many of these have become teachers, several of them professors in southern colleges and universities, and they have exerted a considerable influence in favor of this study. Among them may be mentioned Prof. J. L. Johnson, who has championed the study with great success in the University of Mississippi. Mr. Jefferson's plans for his university attracted great attention through the whole country, and it was very likely on their suggestion that the founders of Lafayette College, which was chartered in 1826, made the study of Anglo-Saxon and English prominent in their proposed curriculum.

Noah Webster's Dictionary was the most notable product of his Anglo-Saxon studies. It is not known that he made any earnest effort to introduce the language into the college at Amherst, which he helped to found, but his influence was felt there through occasional addresses to the students and the teaching of his son-in-law, Professor Fowler (1838–1843), who was preparing books on the history of the English language, and lectured on such topics to his classes. The attention of some of those who have been teachers of Anglo-Saxon elsewhere was there first drawn to it.

In 1850, Prof. John S. Hart, LL. D., introduced the study of Anglo-Saxon into the Philadelphia High School. The course ran through the second, third, and fourth years of study, with five hours a week in the first two years, and four a week the last year. They read the Gospels and Klipstein's Analecta. Professor Hart gave a course of lectures on the history of the English language and English literature. About 250 students were engaged in the study each year. The course was dropped in 1854 "in consequence of the pressure of other studies and the prejudice excited against this."

Not far from the same date (1851), this study was introduced into Harvard College in the University at Cambridge, where it has been continued ever since. It is part of the instruction given by Prof. F. J. Child, Ph. D., whose title is Professor of Rhetoric and Oratory. At first, all the Sophomore class had lessons in the elements of Anglo-Saxon. Now it is elective for students of the three higher classes, and continues for two years. There are two recitations a week the first year and three the second. Sixteen to twenty are a good class for the first year, when they read March's Reader. The second year, when the text books are German, *Heyne's Beowulf* and *Mätzner's altenglische Sprachproben*, five or six would be a good class, and it is apt to fail altogether.

In 1858, a professorship of the English language and comparative philology was created at Lafayette College. This was the formal establishment of a course of study which had been two years carried on in the college, and was supposed to be the first authoritative recognition of the English and Anglo-Saxon as a separate department of philological study coördinate with Greek and Latin, and the central object of comparative study. At Lafayette, four recitations a week in Anglo-Saxon during the two last terms of Junior year are taken by the whole class, and two recitations more a week are optional for one term. It is also used continually in the philological study of the later English authors. Post graduate studies are also carried on as far as students may wish. Text books have been published by which it is thought possible to give a portion of this language as thorough study as our college text books enable us to give the Latin and Greek. Many teachers and several professors of this study have graduated at Lafayette, and its course and text books have attracted attention in Europe. Prof. S. G. Barnes, of Iowa College, and Prof. R. H. Carothers, of Westminster College have aided in the preparation of text books.

In 1868, Prof. H. Corson, LL. D., began this study at St. John's College, where he was professor of rhetoric and English literature, and in 1871 he accepted a chair of Anglo-Saxon and English in Cornell University. The study has been continued at St. John's College with earnestness and efficiency by Prof. J. M. Garnett. Professor Corson soon after published a valuable "Handbook of Anglo-Saxon and Early English," representing the language and literature from Ælfred to the end of the fourteenth century, with glossary, grammar, and other apparatus. Students in the School of Literature at Cornell are required, and others may elect, to devote to the study of Anglo-Saxon and early English four recitations a week during two terms of the Freshman year and three a week during two terms of the Sophomore year. They read a large part of Professor Corson's handbook. The present class (1875) numbers thirty-two (32), of whom three elect the study from other schools, and ten (10) are "lady students." "The lady students," Professor Corson says, "do the best."

Other handbooks for beginners have been published by Professor Shute of Colum-

bian College, and Professor Carpenter of the University of Wisconsin, and the interest in the study has been greatly increased within the last five years.

The answers to a circular of inquiry issued by the Bureau of Education to our principal colleges show that twenty-three of them study Anglo-Saxon, reading more or less of it. The study at Yale is in the Sheffield School and in one of its post graduate courses. Eight more claim to study it incidentally in their course of English literature. Almost all of them, except those before named, have begun it within the last four years; several have offered it this year for the first time. Haverford dates back to 1867. Of those who do not study it, nine couple the statement of that fact with some expression of regret or anticipation. The answer from the University of Michigan is: "Sorry to say that the study is not pursued at all"; so from Dartmouth. From Princeton we learn that it may be introduced hereafter; so from the Central University at Richmond, Kentucky, and Vanderbilt University, which is recently opened. The Chancellor of the University of Georgia says that "the study is more important than that of any modern language." Only sixteen of those returning answers are content with simply stating that they do not study Anglo-Saxon.

A CALL FOR ANGLO-SAXON SCHOLARS.

This is great progress for any linguistic study to make in these times when the natural sciences are crowding everywhere. The time is all full in the old colleges, and the supply of good teachers for the new study is very scant. The professors of rhetoric who are oftenest turned to are not often linguists; it is better to try the Latin or Greek professor, as is done at Haverford. But special attainments are needed. To the coming generation of scholars, Anglo-Saxon has prizes to offer as tempting as any. There are professorships, and then the eminence which waits on successful original work in a prominent field. There is nowhere in the world so much of this study as in America. Professor Child says, in his answer to the circular of the Bureau, that "Anglo-Saxon is *utterly* neglected in England—at present there is but one man in England that is known to know anything of it—and not *extensively* pursued anywhere in America." The Germans, he adds, "cannot do their best for want of properly edited texts. Two or three American scholars, devoted to Anglo-Saxon, would have a great field to distinguish themselves in, undisputed by Englishmen."

THE PRONUNCIATION OF GREEK IN THIS COUNTRY.

JAMES R. BOISE, PH. D., LL. D.,
Professor of Greek, Chicago, Ill.

Three methods of pronouncing Greek have prevailed more or less in American schools:
1. The English system;
2. The Modern Greek, called also Reuchlinian; and
3. The method sometimes styled "Continental," sometimes "Erasmian."

Of the first, which was almost universal in this country fifty years ago, Goodwin, in the Preface of his Greek Grammar, very justly and forcibly remarks, "That monstrosity, the so-called 'English system,' which saddled the Greek at once with English vowel sounds and Latin accents, is now unintelligible to the majority of our scholars; and it is not likely that a system which requires the use of a foreign system of accentuation will ever be generally adopted."

The second, the modern Greek pronunciation, while advocated by some very eminent men, has been adopted in very few schools, and need not here be particularly described.*

The third, the so-called continental or Erasmian method, is already widely prevalent, is every year rapidly gaining ground, and seems likely very soon to become almost universal in our American schools.† It is, therefore, this method of pronouncing Greek which I propose here briefly to describe.

THE SO-CALLED CONTINENTAL OR ERASMIAN METHOD OF PRONOUNCING GREEK.

I. OF THE SOUNDS OF THE VOWELS.

A, *α*, has the sound of *a* in *father*.
H, *η*, has the sound of *a* in *gate, late*.
E, *ε*, has the sound of *e* in *men*.
I, *ι*, has the sound of *i* in *machine*.
Ω, *ω*, has the sound of *o* in *tone*.
O, *ο*, has the same sound as *ω*, with half the length. When followed by a consonant in the same word, it is quite common to pronounce it like *o* in *log*; yet this sound is not strictly correct, and should never be given to *o* before another vowel, or at the end of a word. It is sometimes, both in this country and in Germany, pronounced with an explosive, guttural sound, to indicate that it is short. Thus, *τό* is pronounced almost as though it were written *τόχ*, the last letter purely aspirate. This sound should be carefully avoided. The same caution should also be observed in pronouncing the other short vowel, *ε*.

*The modern Greek pronunciation was taught in Germany by the celebrated theologian Reuchlin (born 1455, died 1522); and at that time appears to have been in general use wherever the Greek language was studied. The correctness of this pronunciation was first questioned by Erasmus of Rotterdam (born 1467, died 1536) in a facetious dialogue between a lion and a bear (Dialogus de recta Latini Græcique sermonis pronuntiatione, Basileæ, 1528). Erasmus seems not himself to have adopted the system proposed in the dialogue, but to have indicated his opinion that it was a near approximation to the ancient pronunciation. From his time, however, the system which bears his name has been constantly gaining ground, and is now, with unimportant variations, the prevailing system in Germany and many other countries.

†The inquiry has often been made of the Commissioner of Education, "Can you inform me what is the prevailing pronunciation of Greek and Latin in this country?" In order to answer this inquiry satisfactorily, letters were sent to all the leading classical professors, asking them for a brief statement of their method of pronunciation. The letters relating to the pronunciation of Greek were placed in my hands. I have examined one hundred and twenty-five, taken at random from a considerably larger number, and the result was as follows: Two professors, out of the entire number, teach the modern Greek pronunciation; eighteen teach the English system; four teach partly the English and partly the continental system; and one hundred and one the Erasmian method only. It thus appears that the pronunciation of Greek in this country is far more uniform than that of Latin. The fact is worthy of special notice that of the twelve oldest and best known New England colleges—two in Maine, one in New Hampshire, two in Vermont, three in Massachusetts, one in Rhode Island, and three in Connecticut—not one of the entire number any longer retains the English pronunciation of Greek, although several of them still retain the English pronunciation of Latin. The example of the New England colleges alone must have great weight in settling the usage in all the younger institutions and in the newer States. The fact is also worthy of note that in nearly all the colleges of this country the change from the English to the Erasmian method has been made chiefly within the last quarter of a century.

Υ, *υ*, like the French *u* or the German *ü*. Often, however, owing to the difficulty we find in giving this sound, *υ* is pronounced like the English *u* in *lucid*, or like *ew* in *few*.

No distinction in pronunciation is usually made between *ᾱ* and *ᾰ*, *ῑ* and *ῐ*, *ῡ* and *ῠ*; *e. g.*, *ἀρα* and *ἆρα*, *κᾱλός* (Epic) and *κᾰλός* (Attic), *ἰσος* (Homeric) and *ἴσος* (Attic), *λῡ-* and *λῠ-* in the verb *λύω*, are pronounced alike.

In actual practice, *α* and *ι* are usually shortened a little when followed by a double consonant or by two single consonants in the same word; *e. g.*, the *ι* in *ἵστημι* is usually pronounced like *i* in *history*, the *α* in *κάλλος* like *a* in *callous*; but *υ* is not thus shortened, *e. g.*, *υ* in *ὕψος* and *ὕστερος* is sounded like *υ* in *ὑπό*, *ὕδωρ*; also, *υ* in *ἐκρυψα* like *υ* in *ἔλυσα*, never like *u* in *lump*.

II. OF THE SOUNDS OF THE DIPHTHONGS.

In *αι* both vowels are sounded, nearly as in *aisle*, or *aye* (expressing assent).
ει, like *ei* in *height*.*
οι, like *oi* in *toil, oil*.
αυ, like the German *au*, or the English *ou* in *house, our*.
ευ, like *eu* in *neutral*.†
ου, like *ou* in *courier*; *i. e.*, like *oo* in *boot*.
ωι, like *wi* in *winter*, or *ui* in *quit*.
ᾳ, *ῃ*, *ῳ*, are pronounced like *α*, *η*, *ω*; *i. e.*, the iota is not pronounced at all
ηυ is pronounced like *ευ*.
ωυ is pronounced like *ου*.

III. OF THE SOUNDS OF THE CONSONANTS.

Β, *β*, like *b*.
Γ, *γ*, like *g* hard, never *g* soft; but *γ* before a palatal (*κ*, *γ*, *χ*, or *ξ*) has the sound of *n* in *anger*, and was represented by *n* in Latin; *e. g.*, *ἀγκυρα*, Latin *ancŏra*, anchor, The mistake is sometimes made of pronouncing *γ* like *ng* before *μ*; as in *λέλεγμαι*, wrongly pronounced *lélengmai*, correctly pronounced *lélegmai*.
Δ, *δ*, like *d*.
Ζ, *ζ*, is generally in this country pronounced as the English *z*. It is also pronounced thus by the modern Greeks. Some American scholars, however, pronounce *ζ* as *dz*; *e. g.*, *σώζω*, pronounced *sōdzō*. This pronunciation is recommended generally in the best German grammars, and Hadley, in his Elements of the Greek Language (§ 11, *a*), remarks: "It is supposed that *ζ* had at first the sound of *dz*."
Θ, *ϑ*, *θ*, is pronounced, in this country and in Great Britain, always, I think, like *th* in *thick, thin*.

The modern Greeks pronounce this letter as we do. The Germans have great difficulty in giving this sound; and Georg Curtius (Erläuterungen zu meiner griechischen Schulgrammatik, p. 19) says of this letter, "It is not advisable for us [Germans] to accustom ourselves to a pronunciation which is foreign to us, and which can be shown also not to be the ancient pronunciation." It is quite possible that the ancient Greeks, in pronouncing all three of the rough mutes, *φ*, *χ*, and *θ*, made the initial sound sharper and more like the corresponding smooth mutes, *π*, *κ*, and *τ*, than we do. This seems to be indicated by the sounds they have in Sanskrit, *p'ha*, *k'ha*, *t'ha*; also by the Roman mode of representing these letters, at least by writing *ph*, instead of *f*, in words of Greek origin. But if the Germans content themselves with their pronunciation of *φ* and *χ*, we have equally good reason to be satisfied with our pronunciation of *θ*. It is one of those nice points about which we need not be over anxious.

Κ, *κ*, like *k*, or *c* hard.
Λ, *λ*, like *l*.
Μ, *μ*, like *m*.
Ν, *ν*, like *n*.
Ξ, *ξ*, like *ks*. Each sound, even at the beginning of a word, should be distinctly heard. Thus, *ξένος* should not be pronounced as though it began with *ζ*, but with the palatal sound *κ* at the beginning distinctly audible. So, also, *Ξενοφῶν* should not be pronounced in Greek as Xenophon in English, but with *κ* and *σ* both audible. This is not difficult after a little practice.
Π, *π*, like *p*.

* This is the usual pronunciation both in Germany and in this country; but Professor Sophocles, in his work on "The Greek Alphabet and Pronunciation," and Professor Packard of Yale College, in an article in the New Englander (January, 1871), propose for *ει* the sound nearly of *ei* in *freight, rein*. Curtius favors the distinct utterance of both vowels *ε* and *ι*, which would yield nearly the sound of *ei* in *rein*. Kühner, on the other hand, argues in favor of the present pronunciation, and thinks it a near approximation to that of the classic period. If we pronounce it like *ei* in *height*, we must be careful to distinguish between *ει* and *αι*; if like *ei* in *rein*, to distinguish between *ει* and *η*.

† The German pronunciation of this diphthong, which makes it nearly identical with *οι*, English *oi* in *boil*, is not to be recommended, and is not favored by Curtius.

P, ρ, like *r* in the languages of continental Europe; that is, stronger and more distinct than in English. The sound of *r* is almost if not quite inaudible as many persons pronounce *war, liberty,* and many other English words. This fault should be carefully guarded against in pronouncing Greek. Another fault, even more common, cannot be too carefully avoided, that of pronouncing ερ like the English *er* in *perfect, persuade, serve,* &c. It should always be sounded like *er* in *merry, ferry, error.* Thus, ἔρχομαι should never be pronounced *urchomai;* ἔργον, never *urgon.* The rough breathing over ρ at the beginning of a word, and in some editions over the second ρ when doubled in the middle of a word, is thought by some scholars to indicate simply the rolling of the letter. (Cf. History of the Greek Alphabet by Prof. E. A. Sophocles, p. 115.) To most Americans the rolling of the letter is somewhat difficult, and in practice is not generally attempted. In fact, I doubt whether the rough breathing was intended for this purpose. I think we very naturally utter an initial ρ with a perceptible aspiration, and it is not improbable that the rough breathing was intended to indicate this. Such is the opinion of Kühner (cf. Ausführliche Grammatik, erster Theil, erste Abtheilung, § 8).

Σ, σ, ς, like *s* in *sir*; *i. e.*, always sibilant, never like *z*. There is a strong tendency to pronounce σ, ς, like *z* in many Greek words, as in μοῦσα, τῆς, ὡς. In μοῦσα, the analogy of the English word *muse* may account for this tendency. It should be carefully avoided, and σ, ς, always be made purely sibilant.

T, τ, always like *t*. Thus Βοιώτιος should never be pronounced *Boió-she-us,* but always *Boi-ó-ti-os;* although the English word *Bœotian* is usually pronounced *Bee-o-she-an.* Ὑπατία is pronounced *Hu-pa-tí-a* (French *u* in the first syllable); although in English we say *Hy-pá-she-a.*

Φ, φ, like *ph* in *philosophy.*

X, χ, like the German *ch* after *a, o,* or *u,* as in *sprachen, machen;* or like the Scotch *ch* in *loch;* not like the German *ch* after *e, i,* or *y,* as in *ich, nicht.* It is frequently pronounced in this latter way by the Germans, and sometimes in this country; but this sound is, I think, certainly false, as it is not palatal. The true sound is somewhat difficult for an American who has not learned German. It is a strong aspiration in the palate, distinguishing this letter at once from κ, the corresponding smooth mute. Thus, ἔχθος and ἐκτός would be distinguished not only by the lingual (τ-mute) and by the accent, but also, and equally, by the palatal (κ-mute): οὐκ and οὐχ are also readily distinguished.

Ψ, ψ, like *ps,* with both sounds distinctly heard; at the beginning, not less than in the middle, of a word.

N. B.—Particular care should be taken in pronouncing the double consonants, or two single consonants, at the beginning of a word, to give each letter its proper sound; as, πνέω, πνεῦμα, κνέφας, κτῆμα, πτολεμαῖος, φθίσις, ξέω, ψάω, pronounced *pneo, pneuma, knephas,* &c., with the *p* or the *k* distinctly sounded. Avoid also putting in a vowel sound after the initial consonant. Not *pĕ-neo, kĕ-nephas,* &c., but the two consonants in close succession. This is not difficult to those who are familiar with German.

Under this head may be mentioned the breathings, rough (spiritus asper) and smooth (spiritus lenis). The rough breathing, placed over the initial vowel (as ὄν), corresponds to the letter *h* in *his;* the smooth breathing, also placed over an initial vowel (as ὄν), indicates the absence of the aspiration, and might be very useful to such careless or ill educated persons as would in English confound *all* and *hall, is* and *his, oh* and *hoe,* &c. Every word beginning with a vowel or diphthong had one or the other of these breathings, which, however, in the case of a proper diphthong, was placed over the second vowel.

IV. OF THE ACCENTS.

As is known to every scholar, there are three forms of accent in Greek; but it is not now customary to make any distinction in sound between them. Thus, καλός, πατήρ, as they would be written at the end of a sentence, are pronounced like καλὸς, πατὴρ, as they would be written in the middle of a sentence; and νεᾷ, νεῷ, or λεᾷ, λεῷ, as they are variously written, are pronounced alike.

The written accents indicate in all cases the syllable on which the stress of voice falls. A proclitic should be pronounced as an unaccented syllable of the following word, and an enclitic as an unaccented syllable of the preceding word. Thus, ὁ ἀνθρωπος, ἀγαθόν τι, αὐτός φημι, should each be pronounced with but one accented syllable; ἀνθρωπός τις, παῖδές τινες, each with two accented syllables. In εἴ τίς μοί φησί ποτε, and similar combinations, the accent should be carefully observed.

It is sometimes objected to the use of the written Greek accents that we cannot, at the same time that we observe them, make the quantity of the vowels apparent. But it seems not to be thought of that this objection applies with equal force to the Latin rule for the accent. In the Latin, scholars generally make no distinction between the penult of *stāre* (infinitive of *sto*) and that of *dăre* (infinitive of *do*); or between *mensă* and *mensā*, nominative and ablative; and so in numberless other instances. Take, for example, this sentence from Cicero: *Nunc vero, quæ tua est ista vita?* The quantity of not one of these syllables, unless it is a diphthong or long by position, is indi-

cated in the pronunciation. The objection is really of no weight whatever; and while in Latin it applies to all the vowels, in Greek it applies only to the three doubtful vowels *a*, *ι*, and *υ*. It is not difficult, and is actually customary, to distinguish between *ε* and *η*, *o* and *ω*. Thus, every careful teacher and scholar will make the difference between *λύομαι* and *λύωμαι*, between *λύεται* and *λύηται*, quite apparent. Nor is it very difficult to show the proper quantity of the penult in such words as *ἄνθρωπος*, *λύοιμι*, *λύσαιμι*, etc.

Again, it is said we cannot observe the written accents in reading poetry, as such, *i. e.*, metrically. This objection is equally short sighted with the preceding, since it applies with equal force to the Latin rule for the accent. Let any one undertake to scan a verse in Virgil, and make the metrical accent (the *ictus metricus*, as it is sometimes called) coincide with the accent according to the rule for prose. He will at once find that the two are entirely independent of each other. The same is true in Greek poetry, showing that poetry among the Greeks and Romans was farther removed from prose, more artificial, more like song, than with us.

V. OF THE PRONUNCIATION OF GREEK PROPER NAMES.

But one question remains for us to consider in this paper; and it is by no means a question easy to settle. How shall we anglicize Greek proper names? The conventional method is this: to write the Greek word with Roman letters, thus giving it the form of a Latin word, and then to pronounce it with the English sounds of the letters and the Latin rule for the place of the accent. Thus, *Ξενοφῶν* (with the accent on the ultima and the double consonant Ξ pronounced as *ks*) becomes *Xenŏphon* (with the accent on the antepenult and the initial consonant pronounced as *z*); *Σωκράτης* (accent on the penult and continental sound of the *a*) becomes Socrātes (accent on the antepenult). Whether we write the Greek *κ* in Latin as a *c* or a *k*; and *ει* as *ei* or *ē* or *ī*; and *αι* as *ai* or *ae*; and *οι* as *oi* or *oe*, the above rule still holds good; the vowels and diphthongs and consonants are pronounced as in English, and the Latin rule for the place of the accent is applied. Whatever objections may lie against this method of dealing with Greek proper names, and though something else may be substituted for it before very long, it is at least the prevailing method at present. It may require some care on meeting such a word as *Ἀλκιβιάδης* in a Greek sentence, to give it the proper pronunciation as a Greek word, and then, on rendering the sentence into English, to call the word *Alcibĭădes* or *Alkibĭădes*, with Latin accent and English sounds of the vowels. But the same care is required in Latin and in the modern languages. No one who pronounces the *c* in *Cicero* hard in a Latin sentence would pronounce it *Kikĕro* in English. No one pronounces the words *Paris*, *Lyons*, etc., the same in French and in English. Those who meet the words *Wien*, *München*, *Köln*, in a German sentence, and pronounce them correctly in German, call them in English Vienna, Munich, Cologne. Those who visit Venice, if they speak German, French, Italian, and English, learn for the same city the four names *Venedig*, *Venise*, *Venezia*, and *Venice*; and if they speak modern Greek, they will have also the word *Βενετία*, all five names differing greatly in their sound. It is no more difficult or inconsistent to change in a similar way ancient Greek proper names. It requires care and discrimination to do this; but those qualities are continually called in requisition in the study of any foreign language; and in this fact lies one of the many benefits derived from the study of language.

In the foregoing statements, which have been prepared in compliance with the request of many teachers in different parts of this country, I have not sought to give any new theories respecting the pronunciation of Greek, but simply to present what I understand to be the most approved usage in this country, without any long array of arguments or learned discussions. Minute points of difference in the sounds both of the vowels and of the consonants undoubtedly prevail and will ever prevail in pronouncing Greek, and not less in pronouncing our own language; but the general system is now tolerably uniform. In the main, the system above given is the same as that which prevails in Germany, so that those who have learned this system here, and who go to Germany for the further prosecution of their classical studies, will need to make few, and only unimportant, changes, in order to understand and be understood.

Those who desire to pursue this subject further will be well repaid by reading carefully the article already referred to in The New Englander for January, 1871, by Professor Packard; also the work of Professor Sophocles, History of the Greek Alphabet and Pronunciation, published by George Nichols, Cambridge, Mass., 1848; also two very critical papers in Hadley's Essays (New York, Holt & Williams, 1873), one "On the Nature and Theory of the Greek Accent;" the other "On the Byzantine Greek Pronunciation of the Tenth Century, as illustrated by a Manuscript in the Bodleian Library." In the German language, consult especially Kühner's Ausführliche Grammatik der griechischen Sprache, erster Theil, erste Abtheilung, § 3; Georg Curtius's Erläuterungen zu meiner griechischen Schulgrammatik, Cap. 1; also an article by the same, Ueber die Aussprache der griechischen Vokale und Diphthonge, in Zeitschrift für die œsterreichischen Gymnasien, 1852, 2. Heft.

UNIVERSITY OF CHICAGO, *January*, 1876.

LATIN PRONUNCIATION.

W. G. RICHARDSON, M. A.,
Professor of Latin, Central University, Richmond, Ky.

In accordance with the expressed wishes of many professors of Latin in our institutions for superior instruction, the Bureau of Education recently sent out inquiries to ascertain the prevailing usage as to the pronunciation of the Latin language in the universities and colleges and in college preparatory schools in the United States. The replies received in answer to these inquiries were sent to me for tabulation and review. It has also been endeavored briefly to set forth the usage in other countries. My own views on the much vexed question of the correct pronunciation of Latin I have not hesitated freely to express in this paper. For these the Bureau is in no way responsible.

The tabulated results are given at the close of this paper. As all Latinists are not necessarily orthoepists, and as the terms used are not always well defined, I fear I may have made some errors in classification.

CLASSIFICATION.

The methods of pronouncing Latin may be reduced to three heads:

I. LATIN, or, as it is more commonly but less properly called, ROMAN, a close approximation, as is supposed, to the ancient pronunciation during the Ciceronian and Augustan period. Some style it the phonetic method.

II. The CONTINENTAL, representing the general practice of the continent of Europe.

III. The ENGLISH, because of its conforming to English orthoepical analogies.

I. THE LATIN OR ROMAN PRONUNCIATION.

1. ITS USE AND PROGRESS.

No age of the world has been so noted for original investigation as the present: nothing is accepted as trustworthy, merely because it has secured general assent; everything is placed in the crucible, and results must be stated without fear or favor. Truth will bear the light, and must stand on its own merits. Previous bias and prejudice must be set aside. In attempting to set forth what the true pronunciation of Latin is, the Roman grammarians and rhetoricians have been freely consulted. The Ariadne thread which has been let out through the labyrinth of the modern tongues has been traced back by painstaking philologic Theseuses — in most respects satisfactorily, in a few details doubtfully. Words change with epochs. There is no material discrepancy among those who attempt to present classic usage; who essay to reproduce to the ear the burning words which fell from the lips of Cicero, or were struck from the lyre of Horace, which thrilled the bosoms of the sweethearts of Tibullus and Propertius, or which, recited by Virgil, drew tears from imperial auditors.

So far as I have been able to ascertain, the present prevailing pronunciation in England, namely, the English, does not go back two centuries. There the Continental was once the prevailing usage, as is the case now in Scotland and Ireland, and in all Roman Catholic colleges and countries. In the United States, till within the past twenty years, two systems have held nearly equal sway, the advantage being rather with the English system. But in the period named the Latin method has made decided advances. At this time, usage is about equally shared among the three.

In New England, a few years ago, the English pronunciation of Greek was almost undisputed. Now, thanks to Hadley, Goodwin, Gildersleeve, Sophocles, Boise, Packard, Owen, and others, the ancient pronunciation, or what is a very close approximation to it, is almost universal. The world over, nearly all the Latin grammarians and orthoepists of the last quarter of a century have urged a return to first principles. The Latin has rights of its own and a demonstrated pronunciation which should be respected, as in the case of the sister tongue.

2. BIBLIOGRAPHICAL LIST FOR THE LATIN PRONUNCIATION.

1851.

America may claim the credit of leading this reform, in the person of Prof. S. S. Haldeman, of the University of Pennsylvania. His admirable little treatise is entitled, Elements of Latin Pronunciation for the use of students in language, law, medi-

cine, zoölogy, botany, and the sciences generally in which Latin words are used. Lippincott, Philadelphia. 76 pp. 12mo. 75 cents. It appeared in 1851. Subsequent investigations by the most critical and eminent scholars in Germany, England, and America have confirmed the general accuracy of this first explorer.

The intelligent interest which Professor Haldeman feels in orthoepy has been evinced in the following contributions: Power of the Greek *Z*, 1853, (and Phonetic Advocate, December, 1849;) Analytic Orthography, 1860; English Affixes, 1865; On the Pronunciation of Latin as presented in several recent grammars, (Bartholomew, Bingham, and Roby,) American Philological Association, 1873; Review of Professor Blair's Latin Pronunciation, Southern Magazine, Baltimore, October, 1873; On several points in the pronunciation of Latin and Greek, Wisconsin Academy of Sciences, vol. ii, 1873-'74.

1852.

Glossology. By Charles Kraitsir, Ph. D.

1858.

Ueber Aussprache, Vokalismus und Betonung der lateinischen Sprache, von W. Corssen. Leipzig. 2 vols. 8vo. 1921 pp. $6. This learned and exhaustive work made a profound impression in the classical world. Of the second and improved edition, published 1868-'70, Allen and Greenough, in their Latin Grammar, say: "The greatest work on Latin *alone*, treating the language in reference to its own individual development, particularly as to the sounds (Lautlehre)."

1859.

Roman Orthoepy: a plea for the restoration of the true system of Latin Pronunciation. By John F. Richardson, Professor of the Latin Language and Literature in the University of Rochester, N. Y. Sheldon & Co., New York City. 114 pp. 16mo. 50 cents. The advantages of the Roman over the English method are well set forth, particularly the argument drawn from prosody.

1860.

Latin Pronunciation and the Latin Alphabet. By Dr. Leonard Tafel, of Philadelphia, and Prof. Rudolph L. Tafel, of St. John's College, Annapolis, Md. Based on Corssen's work. 172 pp. 12mo. 75 cents.

1866.

Manual of Latin Grammar. By Gustavus Fischer, of Rutgers College, New Jersey. 2 vols. 12mo. $3.

1867.

A Latin Grammar. By Basil L. Gildersleeve, Ph. D., LL. D., University of Virginia. University Publishing Co., New York. 284 pp. 12mo. $1.25. A revised edition of this excellent grammar appeared in 1872, 384 pp. 12mo. $1.50. For pronunciation, see the edition of 1875, and his Latin Primer, 1875. Dr. Gildersleeve is now professor of Greek at the Johns Hopkins University.

1870.

Latin Pronunciation at Harvard. By George M. Lane, Ph. D., Professor of Latin. Boston. 4 pp. 16mo. Professor Lane was the pioneer of the Latin or Roman pronunciation in New England.

Latin Pronunciation: an Inquiry into the proper sounds of the Latin Language during the Classical Period. By Walter Blair, Professor of Latin in Hampden Sidney College, Virginia. Barnes & Co., New York City. 136 pp. 16mo. $1. Mr. A. J. Ellis characterizes this as "an extremely useful little work." It was reviewed in the Southern Magazine, October, 1873, by Prof. S. S. Haldeman.

A Compendious Grammar of the Latin Language, with Copious Exercises. By Charles D. Morris, M. A., formerly Fellow of Oriel College, Oxford, England. 327 pp. 12mo. $1.75. A third edition was published in 1873. The author is now a professor in the Johns Hopkins University.

1871.

A Grammar of the Latin Language from Plautus to Suetonius. By Henry John Roby, M. A., late Fellow of St. John's College, Cambridge, England. Macmillan & Co., London, and 22 Bond street, New York City. 2 vols. 12mo. Vol. I. Second edition. 478 pp. $2.50. One hundred and seventy-three pages are devoted to pronunciation, (see especially p. xc.) The conclusions reached are in the main very satisfactory. In Vol. II, first edition, the syntax embraces 555 pages. $3.50. "Mr. Roby has given special prominence to the treatment of sounds, and has done much toward settling a discussion which is at present largely engaging the attention of scholars, viz., the pronunciation of the classical languages." The Athenæum says: "The book is marked by the

clear and practical insight of a master in his art. It is a book that would do honor to any country."

A Few Remarks on the Pronunciation of Latin, with a Postscript by H. A. J. Munro, of Cambridge. Macmillan & Co., London. 36 pp. 8vo.

Syllabus of Latin Pronunciation. Drawn up at the request of head-masters of schools. By Edwin Palmer, of Oxford, and H. A. J. Munro, of Cambridge. Macmillan & Co., London. 8vo. 12 cents. The reform pronunciation is rather more popular at Cambridge than it is at Oxford, where the question has not been so much agitated. In a letter to myself, June 8, 1875, Mr. Roby says that the "movement began with the Rev. Dr. Abbott, head-master of the city of London schools." He adds: "The chief classical schools have the upper forms familiarized with the scheme of pronunciation put forth by Munro and Palmer, or some such scheme. At the university there is, I believe, no systematic adoption of it; but some teachers practise it more or less, and, among the students, the number of practisers (if I may use such a term) becomes greater as the boys pass up from the schools."

1872.

Latin Pronunciation. By Tracy Peck, Professor of Latin in Cornell University, Ithaca, N. Y. Circular. 1 p. 8vo.

A Latin Grammar founded on Comparative Grammar. By Joseph H. Allen, of Cambridge, Mass., and James B. Greenough, of Harvard University. Ginn Bros., Boston. 266 pp. 12mo. $1.56. A revised and greatly improved edition will soon be published. Ginn & Heath, Boston. 12mo. 329 pp. $1.56.

Latin Lessons. By R. F. Leighton, master of the Melrose High School. Revised. Ginn & Heath. 334 pp. 12mo. $1.50.

1873.

A Grammar of the Latin Language. By G. K. Bartholomew. Wilson, Hinkle & Co., Cincinnati. 276 pp. 12mo. $1.50. Professor Bartholomew says: "The Roman pronunciation, if practised from the beginning, renders nearly all rules of quantity useless." Mr. A. J. Ellis remarks that "Bartholomew adheres closely to the ancient grammarians" in his pronunciation.

The Public School Latin Grammar for the use of schools, colleges, and private students. By Benjamin Hall Kennedy, D. D., professor in the University of Cambridge, England. Longmans, Green & Co., London. A third edition was published in 1875. 599 pp. 8vo. $3. This is a valuable book. The author devotes sixty-eight pages to "soundlore." He says: "Mr. Roby is a scholar whose learning, ability, and industry entitle all he says to the fullest attention."

1874.

Practical Hints on the Quantitative Pronunciation of Latin, for the use of classical teachers and linguists. By Alexander J. Ellis, of Trinity College, Cambridge, past president of the Philological Society. Macmillan & Co., London. 132 pp. 16mo. $1.75. In the preface the author says: "This syllabus was at once introduced into several of the larger schools in England, at least in the higher forms. I at once adopted it for the use of my classes in University College, and a very similar scheme of pronunciation was only last year printed by Professor Key for University College school. Independently of this, a reformed pronunciation has been adopted in various educational establishments in this country; and it is no uncommon occurrence in my classes to find students on their arrival already trained in the new method, with such slight differences (and they are really slight) as the divergence of opinion on particular points makes unavoidable. On one point there seems to be a very general agreement, viz: wherever it has been introduced it has been adopted without difficulty by students of all ages, even by the youngest boys, from ten years old upwards."

Report on Latin Philology. By Prof. Robinson Ellis, of University College, London, president of the Philological Society.

1875.

Latin Language and Literature. Appleton's Cyclopædia, illustrated, vol. 10. By Prof. G. A. F. Van Rhyn, Ph. D. "It is now pretty well ascertained what the pronunciation was. Roby has an admirable exposition of the subject. It is expected that the correct pronunciation will be generally adopted."

Latin Pronunciation Practically Considered. By Tracy Peck, A. M., professor of Latin language and literature in Cornell University, Ithaca, N. Y. Published in the Proceedings of the Twelfth Anniversary of the University Convocation of the State of New York, pp. 69-79. Albany. 1875.

Many articles have been contributed to educational and other journals of the country or inserted in college catalogues by Henry Frieze, professor of Latin in the University of Michigan, Ann Arbor, commentator of the Æneid of Virgil; E. H. Twining,

late of the University of Missouri, at Columbia; J. H. Raymond, LL. D., president of Vassar College, Poughkeepsie, N. Y.; A. J. Quinche, University of Mississippi, at Oxford; W. G. Richardson, Central University, Richmond, Ky., and many others.

A more extended list of works bearing on the Latin or Roman method is given than in the other cases for the reason that the bibliography of this method is not so well known.

3. The method of pronunciation.

Vowels.

Long and short vowels generally differ in quantity, not quality, of sound.

ā is sounded like our *a* in *father*. It has the rich Italian sound of that letter, as indicated in the dictionaries of Worcester and Webster. The sounds we hear in *fate* and *fat* are unknown in the Latin *a*; so also is that intermediate sound of which some otherwise good speakers are guilty in saying, or trying to say, "Our Father." *ă* has the sound of *a* in *diadem*.

ē is French *è*, which Surenne properly represents as our *e* in *met*, very slightly prolonged. *ĕ* is same in quality, differing only in quantity. It is French *é*, or *e* in *met*, still more prolonged than *è* in *très*. Thus, *fête*, as rapidly enunciated among the Parisians, is represented in the works of English lexicographers by *fate*. This is certainly a convenient approximate sound.

ī as *i* in machine; *ĭ* as *i* in *purity*. See *site* in Webster's Unabridged Dictionary.

ō as *o* in *no*. For *ŏ* Roby gives *dot, not, ŏmit*.

ū like *oo* in *moon*; *ŭ* short like *u* in *full*.

y intermediate between *i* and *u*. It is French *u* or German *ü* (Müller is nearer Miller than Muller). For convenience' sake, then, rank *y* with *i*.

A short vowel rendered long by position, as, for instance, *e* in *est* and *esse*, is still pronounced short.

Great care should be taken as to final short syllables; *e. g., essĕ, amatŭr, amatŭs*. Distinguish *fructŭs* and *fructūs*.

Diphthongs.

In all these, each element is heard. Let the combination be rapid.

ae or *ai* like *ay* (yes). In rapid utterance, it is nearly our personal pronoun of the first person. *i* is a compound sound made up of *ah* and *ee*. See Walker's Dictionary.

au like *ow* in *now*. The analysis is *ah-oo*. The rapid combination is *ow* in *now*.

ei as in *vein*, slightly drawled, and not like the English *i* in *time*.

eu as *eh-oo*; many give the sound of *eu* in *feud*.

oe or *oi* like *oi* in *oil*.

ui like French *oui*; very nearly our pronoun *we*.

The American Philological Association recommends the use of the Italian sounds of the vowels and diphthongs.

Consonants.

d, f, h, k, l, n, p, t, as in English. So *b* like English *b*, except that *bs* = *ps*. Thus, *urbs, oorps*.

c always hard, like English *k*. See Bullions's Latin Grammar, § 17, 4, note.

g always hard, as in *give*.

j like *j* in *hallelujah*; *i. e.*, like *y* in *yet*.

m at the end of words appears to have been scarcely audible.—(Roby.)

nc is like *nyk*; as *ancŏra*, like *anchor*.

ng like *ngg*; as *frango*, like *anger*.

qu as in *queen* (Roby). But the combination *quu* was odious to the Roman eye and ear. For *quum* always write *cum*. Even *equus* and *loquuntur* may be barely tolerated, and were usually written *equos* or *ecus* and *locuntur*.

r always trilled, as in French.

s always hissing, as in *this*; never like *z*. Thus, *nos, pes, trans*. Every English compound with *trans* should have the hissing sound. See the English dictionaries, Worcester, Webster, Smart.

ti with the pure sound of *t* always preserved. Thus, *natio, nah-te-o*, and not *nā-she-o* or *nah-she-o*. So Bullions's Latin Grammar, § 17, 4.

v is English *w*, or French *ou* in *oui*.

x is *ks*, never *gz*.

z occurs only in words of Greek origin, and is pronounced like *ζ*. Dr. Georg Curtius, in the Elucidations of his Greek Grammar (translated by Evelyn Abbott, John Murray, London, pp. 233, 12mo, §2), says: "*Z*, therefore, which is shown by prosody to be a double consonant, must certainly be pronounced as *dz*, that is, *d* with a soft *s*."

ps preserves the sound of both its elements, as in *psallo*.

ph, th, ch, Roby maintains, are not pronounced as in either English or in German, but as $p + h$, $t + h$, $c + h$, or the ordinary *p, t, c*, immediately followed by a rough breathing. So Curtius as to the Greek; see Elucidations, p. 7. Those who would be annoyed by so much that is foreign to the English will take comfort in Hadley's statement; see Grammar, § 17. "The letters ϕ, θ, χ, seem to have had at first the sounds of *ph, th, ch*, in English u*ph*ill, ho*th*ouse, block*h*ead. But afterward they came to sound as in English gra*ph*ic, pa*th*os, and German ma*ch*en, the last being a rough palatal sound, no longer heard in English." Many orthoepists set down *ch* as practically *k*.

II. THE CONTINENTAL METHOD.

This scheme is too familiar to require any extended observations. It is set forth in detail in the Latin Grammar of the Rev. Peter Bullions, D. D., professor of languages in the Albany Academy. Sheldon & Co. New York. 344 pp. 12mo. $1.50.

1866.

So also in Bullions's, revised by Prof. C. D. Morris. Sheldon & Co. New York. 390 pp. 12mo. $1.50.

1874.

In the Latin Grammar of Dr. Harkness the Continental method is dismissed (p. 7) with this remark: "The Continental method as adopted in this country is almost identical with the Roman, except in the pronunciation of the consonants, in which it more nearly coincides with the English."

III. THE ENGLISH METHOD.

This method, which very generally prevails in England and in New England, is still more familiarly known than the Continental. No attention is paid to quantity, except in determining the place of the accent. The bibliography of this method is too well known to require mention here.

ACCENT.

Accent is the elevation of the voice, with which one syllable of a word is pronounced, in comparison with the more subdued tone with which the other syllables are pronounced. Monosyllables always have the accent. Dissyllables have the accent on the penultimate syllable, unless they are enclitic. Words of more than two syllables have the accent on the antepenultimate if the penultimate syllable is short, on the penultimate if it is long. The Romans distinguish between an acute and a circumflex accent. The circumflex stands only on monosyllables which have long vowels, and in words of more than one syllable on the penultimate, if that have a long vowel and the final syllable have a short vowel. All compound words, whether their parts can or cannot be used as separate words, are accented according to the regular rules. A few words called enclitics, always appended to other words, caused, according to the Roman grammarians, the accent to fall on the last syllable of the word to which they were attached. Prepositions and adverbs used as prepositions were regarded as closely attached to the word which they precede and belong to. In inscriptions they are frequently written as one word with their nouns. The Roman grammarians considered them to have no accent when thus preceding their noun, or a word (*e. g.*, adjective or genitive case) dependent on it. But if they follow their noun, they are said to retain their own accent.—(Roby, book 1, chapter xiii, pp. 98, 99.)

CENTRAL UNIVERSITY, *Richmond, Ky., October*, 1876.

As bearing upon the present situation of the controversy respecting Latin pronunciation, as well as on account of the weight properly attaching to the views therein expressed, the following correspondence is added from a paper read before the Massachusetts Association of Classical and High School Teachers, and printed in a recent number of the New-England Journal of Education. The writer, E. R. Humphreys, LL. D., formerly of Cambridge University, England, and author of several classical text books, is engaged at Boston in fitting students for the English and American universities. He addressed letters of inquiry to various classical teachers as to the methods of pronunciation used by them; below will be found that correspondence, which will show what the present usage abroad is, together with some remarks by Dr. Humphreys himself as to the desirability of the changes which have been suggested.

[From Rev. Mandell Creighton, A. M., recently for several years Dean and Tutor of Merton College, Oxford; now Vicar of Embleton, England.]

I may at once say that the new system of the pronunciation of Latin does not prevail at all at Oxford, *i. e.*, is in no way publicly recognized, nor is it used by many, if indeed by any, of the tutors. It has, I believe, made more way at Cambridge. One or two of the public schools have taken it up, but, as a rule, the old system prevails unchanged.

The opinions of the professors are merely their personal opinions, without any official validity. So far as the new system prevails anywhere in England, it prevails merely from the conviction of the individual teacher, who adopts it himself, and so encourages or trains his pupils to adopt it also.

Really there are two distinct currents of opinion, one in favor of a continental pronunciation, instead of an insular one; another in favor of reproducing the Latin pronunciation, according to Corssen's rules.

Of those who have changed the old pronunciation, some wish only to do the first, others, the second of these things. Consequently, even amongst those who have changed, there is a great divergence of opinion; but the great mass of teachers have not changed at all.

[From Rev. Edward Palmer, A. M., Professor of Latin Literature in the University of Oxford.]

Any person into whose hands the "Syllabus of Latin Pronunciation" may come will read in it that it is not a university document; that it was drawn up by Professor Munro and myself at the request of head-masters of schools, a request which was originally formulated at their conference in 1871, and repeated at their conference in 1872.

It may interest your correspondent to know that when the syllabus, which was drawn up in pursuance of this request, was formally presented to the conference of head-masters — I think in 1874, but I have not anything at hand to fix the date — it seemed as if their zeal had cooled. A resolution was passed that "it was not expedient to take any measures for introducing a reformed pronunciation until the action of the universities in the matter shall be ascertained."

In several public schools partial reforms, which were more or less in harmony with the syllabus, had been attempted before it was issued. I think I am right in saying that these were among the number: Christ's Hospital, Liverpool College, Marlborough, and Rugby; but I never heard that in these schools the said attempts at reform had been afterwards systematized on the plan of the syllabus, or that the pronunciation recommended in it had been introduced into other schools in which no such reform had been before attempted. I regarded the resolution of the head-masters in 1874 as an intimation that they did not intend to proceed further in the matter.

As regards the University of Oxford a new pronunciation of Latin is (so far as I know) a mere εὐχή of a few visionaries like myself. University sanction for such a change was, of course, out of the question. I am not aware that individual professors, tutors, or lecturers venture upon it in dealing with their classes, nor have I heard that Cambridge has been more enterprising. I regard our syllabus as having fallen still-born.

That it, or something better, may come to life some day, as the same causes continue to make themselves felt which prompted the original request of the head-masters, must be hoped for.

Every scholar who deals ever so modestly with comparative philology feels it impossible to explain points of phonetics while he anglicizes in his pronunciation of Latin. Boys from different English and Scotch schools trouble our lectures with discordant utterances, and French, Germans, and Italians fail to perceive that we are speaking Latin at all when we attempt to converse with them in that language.

[From Rev. John E. B. Mayor, M. A., Professor of Latin in the University of Cambridge, England.]

There is, I think, no great difference of opinion here in regard to the principles of Latin pronunciation; even the *w* sound of *v* is secure from ridicule.

Nor do I think that any one who deviates from the traditional routine at all would advocate the pronunciation of *us, ur*, in cantŭs, amatŭr, as in the English "us," "hurt," but rather as *ŏŏs, ŏŏr*.

In practice there is great diversity. Many schools adopt the new pronunciation in the higher forms only, which seems like beginning at the wrong end, *docendo dediscenda*.

However, the result is that the proportion of those who are familiar with the new pronunciation on entering the university is continually increasing.

The old "mumpsimus," both in respect to orthography and pronunciation, is doomed, and no longer ventures to put in a plea in arrest of execution.

If American scholars accept the reform, we may hope that in the next generation all English-speaking Latinists will be intelligible to their colleagues all the world over.

[From Rev. T. W. Jex-Blake, D. D., Head Master of Rugby School, England.]

I think "reformed Latin pronunciation" is mere waste of time, and, if done on a fictitious professor-made plan, absurd. The only reasonable reform would be to take the existing Italian pronunciation, where you have a living natural guide.

But cui bono "reform?" Not for any practical end, for any intelligent man, who is driven to use Latin as a medium of conversation with continental scholars, can adopt their pronunciation in five minutes.

I have had to talk Latin with patois speaking curés in the Alps, whose French was not French and whose German was not German, and could do it at once. In Norway I was for days on a steamer with a Norwegian bishop, and all our talk was in Latin, on his method of pronunciation, and we talked for hours, and have since corresponded in Latin.

Leave pronunciation as it is would be my advice, and spend your time in clearer teaching of the idioms and syntax of the flexible, terse old language, and in a higher treatment of its literary wealth.

The "curiosa felicitas" of Horace does not depend on pronunciation, and Virgil will not become "numerosior" when you have made *au*=*ou*.

[From Most Rev. Gustavus Conrado, Rettore di Propaganda, Collegio Urbano, Roma.]

We pronounce here the combinations *ae* and *oe* precisely in the same way, giving them always the sound of *a* in the English word *mate*. This supposes them to be combined, as otherwise each letter receives its full sound. (For example, the word *aër*.) The combination *au* is so pronounced as to give its native value to each of the concurring vowels, but with a slight stress on the *a*. The result is a sound almost the same as that given to the *ow* in the English word *how*. The letter *j* has always the sound of *y* in the English word *yes*. The letter *c* is pronounced in the same way as in Italian. Before the combinations *ae* and *oe*, it retains the sound it has before *i* and *e*. Also the letter *g* is pronounced here as it is in Italian. Before the combination *oe*, which is not found in Italian, it retains the softer sound, which it has before *e* and *i*. The letter *v* is pronounced invariably as it is in Italian. The words, then, which you mentioned as examples (vincit, Cicero, gingiva,) are pronounced, as far as the letters agree, like the Italian words *vincita*, *Cicerone*, and *gengiva*.

[From Pietro Blaurna, Rettore della R. Università di Roma.]

As I see by your letter there is no need of giving you information as to the way, in general, Latin and Greek are pronounced, I limit my explanation to the way in which we pronounce Latin in our Italian schools, and particularly the letters and combinations alluded to in your letter.

Generally, the Italian pronunciation holds good also for Latin; *æ* and *œ* are pronounced as *a* in *fate; au* as in German, *c* in *Cicero* and *vincit*, as the English *ch* in *choose; g* as in *gentleman, German*.

[Remarks by Dr. Humphreys.]

It is not necessary for me to say anything in reference to these letters, except that all the others from England confirm the statements of the Rev. Mandell Creighton, while those from other European countries show that, while all are at one, or nearly so, in the pronunciation of the vowels, each nation otherwise makes the Latin give way to the rules of its own language.

I believe that in most points the theory of Latin pronunciation associated with the name of Corssen in Germany and Roby in England — most emphatically excepting, however, the weak Semitic sound of *v* as *w* — is correct. But, even if I felt bound to assent to every one of the claims made by these advocates of the so-called Roman pronunciation, I should still maintain that that theory, based to some considerable extent on the law of probabilities, is one thing, and the altering by us of the mode of pronunciation of an ancient language, which enters so largely into the structure of our own English, a mode that has prevailed for so many centuries, is another and very

different thing — a thing demanding very careful consideration. It has seemed to me, I confess, all along, that in thus too hastily undertaking to do justice to ancient Latin we run the risk of doing great injustice, great injury, to our own modern English-American language, into which the Latin has been constantly insinuating itself for the last three hundred years and more, ever in the garb of what is now termed the "old-fashioned English" pronunciation.

As regards the statement dwelt upon by Professor Mayor—of whom I would speak with the utmost respect, as well as friendship—that the reform, if carried out thoroughly in England and America, will render "English speaking Latinists intelligible all the world over," I must emphatically dissent. Certainly, if all American colleges and schools shall be induced to adopt it, the remark will apply to their alumni, who will be able to understand one another when speaking or reading Latin, but at the same time a strong dividing bar will be thereby placed between them and the communion of scholarship with their fathers and all the old school Latinists of the country, many of whom have attained a solid fame which the rising generation may be proud to emulate, but can hardly hope to surpass.

But in Great Britain, as appears from this correspondence, there is no probability of the adoption of the new system to any material extent for a very long period of time, if ever. And, in regard to the other countries of Europe, except perhaps some few of the German universities, I do not hesitate a moment to say, that the Latin scholars of those countries would find it more difficult to understand an American or English Latinist speaking by this "reformed" rule, than ever they found it to be, even when listening to the old-fashioned English pronunciation. Italian scholars, especially, would deem this new method no less harsh than unintelligible.

The most serious point, however, to my mind, is the confusion and injury which, as it seems to me, the sweeping change proposed is likely to produce in the pronunciation, and consequently in the intelligent study, of our own language, which surely deserves our first care and consideration. The study of the etymology of English I have always found to be a powerful and attractive means of winning and leading on young minds and hearts, previously averse to learning, to an earnest study, first of their own language, and then of others which enter into its formation, and especially the Latin. Hitherto, it has not been difficult to make clear to young and even dull children the close relationship of English and Latin in a vast number of words; but, if the hard pronunciation of *c* and *g*, and some of the other "reforms" be once generally accepted, the likeness and connection will only be patent to advanced Latin scholars. It seems not unlikely, also, that a reflex influence will be exerted by our Latinists of the new school, which, beginning with classical proper names, shall gradually substitute hard for soft sounds in the words of common conversation.

For more than twenty years, it has seemed to me that the most desirable and feasible change would be to adopt the continental pronunciation of the vowels — referred to by my friend the Rev. Mandell Creighton, and explained concisely in the letters of the presidents of the Roman University and the College of the Propaganda at Rome — a pronunciation entirely endorsed by the two authors of the syllabus, to which so much weight has been attached in this country, although one of them acknowledges that "it has fallen still-born in England." That amount of change would greatly facilitate the study of modern languages by our youth, and I do not hesitate to assert would tend, far more than the resurrected "Roman" system, to render "English speaking Latinists intelligible all the world over."

The authors of that syllabus are men whose scholarship entitles their opinions to great respect, and I cordially indorse their advice of "giving careful attention to quantity in all Latin pronunciation." In this country, hitherto, both in Greek and Latin, a doubtful system of accentuation has been largely allowed to supersede or override the laws of quantity, about which there is little or no doubt, and I think it will be allowed by all that the effect upon the rhythmical reading of Latin and Greek poetry has been most injurious. Attend faithfully to quantity, and there will be comparatively little difficulty in either Greek or Latin pronunciation.

The appended tables indicate the usage in pronouncing Latin in the 237 universities and colleges and the 87 college preparatory schools named, as reported by them to the United States Bureau of Education.

It should be remarked that many colleges which are here classified as using the English or the Continental pronunciation also employ the Latin in teaching archaic forms or for philological purposes.

Of the universities and colleges 72 use the Latin or Roman method, 75 the Continental, and 90 the English.

Of the preparatory schools 25 use the Latin, 28 the Continental, and 34 the English.

* From Report of the Commissioner of Education for 1875.
a Partially.
b Not prescribed; curriculum consisting of elective schools or departments.
c For students, see report of agricultural department, Table X, Part 1.
d Includes special students.
e Includes ministerial and special students.
f 5 partially.

TABLE IX.—*Statistics of universities and colleges for* 1876, *&c.*—Continued.

	Name.	Annual charge to each student for tuition.	Cost of board per month.	Libraries.				Property, income, &c.						Date of next commencement.
				College library.			Number of volumes in society libraries.	Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.	Receipts for the last year from State appropriation.	Aggregate amount of scholarship funds.	
				Number of volumes.	Number of pamphlets.	Increase in the last collegiate year in books.

* From Report of the Commissioner of Education for 1875.

a Temporarily suspended in consequence of change of location.

b Suspended until new buildings are completed.

c Board and tuition.

d Total income from all sources.

e Buildings sold under deed of trust and college to be transferred to another location.

f In united libraries.

g Income from permanent State fund in academical department.

h Expenses per annum for board, washing, fuel, and lights.

i These statistics are for the courses of arts, philosophy, literature, and science, and optional courses; for statistics of agricultural and other courses see Table X, Part 1.

j From college land scrip funds.

k From productive funds and special gifts.

l Includes room rent, use of library, and incidentals.

TABLE IX.—*Statistics of universities and colleges for* 1876, *&c.*—Continued.

	Name.	Annual charge to each student for tuition.	Cost of board per month.	Libraries.				Property, income, &c.						Date of next commencement.
				College library.			Number of volumes in society libraries.	Value of grounds, buildings, and apparatus.	Amount of productive funds.	Income from productive funds.	Receipts for the last year from tuition fees.	Receipts for the last year from State appropriation.	Aggregate amount of scholarship funds.	
				Number of volumes.	Number of pamphlets.	Increase in the last collegiate year in books.

* From Report of the Commissioner of Education for 1875.
a Included in college library.
b From productive funds and contributions.
c Free to residents of Cincinnati; $60 to others.
d Board and tuition.
e A farm of 67 acres and Mechanics' Hall.
f Including subscriptions.
g Board and room.
h Includes board, room rent, fuel, lights, care of room, and washing of bed linen; coöperative plan.
i From contingent fees.
j Including apparatus of Towne Scientific School.

* From Report of the Commissioner of Education for 1875.
a Reported with classical department, (Table IX.)
b For a building for the mining and metallurgical departments.
c College not yet fully organized.
d From incidental fees and room rents.
e $15 for entrance fees and incidental charges.
f Paid entirely in tuition coupons of stock subscriptions.
g Tuition is free to all students from the State.
h Includes room rent in dormitories.
i Value of buildings.
j One-third income from land grant of 330,000 acres.
k All deserving indigent young men receive free tuition.
l See Table III.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, &c.) not endowed with the national grant of lands, for 1876; from replies to inquiries by the United States Bureau of Education.*

* From Report of the Commissioner of Education for 1875.

a Not yet fully organized.

b The place of this college is, by contract, supplied by the Massachusetts Agricultural College at Amherst. Students at graduation can receive their degrees at the hands of the university, with a diploma entitling them to the relation and privileges of alumni of the university.

c The course is elective post graduate.

d Resigned and succeeded by Rev. Samuel C. Bartlett, D. D.

e Includes 17 in fifth year.

f Reported with classical department, (see Table IX.)

g In School of Design, the only department yet in operation.

h There was an average attendance of about 100 at the drawing classes; there were classes also in phonetic short hand and on the slide valve, and a course of lectures was given on scientific and technical subjects.

i From 400 to 800.

a 41 are the models of all Bartholomew's statues, and 10 of the busts are by the same artist.
b Collection of bronzes made in China and Japan by Prof. W. P. Blake in 1862 and 1863.
c Swedish and American vases.
d Specimens of Oriental, European, old English, and American pottery.
e Copies.
f One of these is an original.
g Museum also contains carvings in ivory and wood.
h Originals; 8 of the busts are also originals.
i 10 of these are statues and 5 are busts, all modern.
j 30 casts of antique statues belonging to the Peabody Institute are at present in this museum. The "Peabody" possesses 5 marbles—Reinhart's statue of Clytie, a copy of Amphitrite, and 3 busts—as the nucleus of a proposed art gallery.
k 60 fragments of antique sculpture, collected in Rome by Mr. C. C. Perkins, are set in wall of corridor, as is customary in Italy.
l Among the casts of antique sculpture are 6 Greek vases, 36 slabs of the frieze of the Parthenon, 24 slabs of the frieze of the Temple of Apollo at Bassae, and other large reliefs.
m Antiquities from Cyprus; 42 are copies of antique busts.
n Also the Dixwell collection of Etruscan pottery, 47 objects, and a large number of Græco-Italian fictile painted vases, collected by Castellani, and presented to the museum by Thomas G. Appleton.
o These are the famous miniature copies of antiques made by Mollica in Naples. 42 statuettes, 35 portrait busts, and 4 busts of the mediæval poets of Italy.
p 3 of these are copies.
q Di Cesnola collection.
r 1 copy in marble.
s 12,000 are of the Di Cesnola collection.
t 1 of these is an original bust.
u The museum owns a rare collection of ceramics and glassware, selected from the exhibitions of different countries at the Centennial; this, supplemented by important loan collections of English, French, and Spanish pottery and glass, furnishes a very complete exhibition of these industries.
v 8 are copies.
w 2 are copies.
x 1 is a copy.
y 17 are originals.
z 3 are copies in marble.
aa 114 are by Barye, of Paris.
bb Copies in plaster.

TABLE XVIII.—PART 1.—*Statistics of museums of art, &c.*—Continued.

a The life-size groups, illustrating life in Sweden and Lapland, which were exhibited at the International Exhibition at Philadelphia in 1876. The museum has also a collection of textile fabrics.

b Carvings in jade, crystal, and ivory.

c Museum also contains 4 Chinese coins 2,000 years old.

d The college possesses a copy of Fortalacium Fidei, a book printed in Latin by Koberger, of Nuremberg, 1485. Every capital is brilliantly rubricated by hand. In its original binding, with wide margins, and in perfect condition, this volume is an admirable and exceptional specimen of the perfection attained by the earliest masters in the art of printing.

e Cardinal Tosti's collection.

f The museum contains a room known as the Lawrence Room, which is fitted with the entire lining and ceiling in carved oak of an English room of the sixteenth century, elaborately ornamented with bas reliefs and with portraits of English kings and queens, in panels. Purchased in London in 1871, and presented by Mrs. T. B. Lawrence. In this room are exhibited chests and other articles of furniture in carved wood, of the fourteenth, fifteenth, sixteenth, and seventeenth centuries. The museum also posesses collections illustrating the application of art to industry, including many specimens of rare embroideries, a large number of textile fabrics, 79 examples of artistic metal work, &c.

g 10 volumes of photographs and 16 original drawings.

h The Way collection; several remarkable pieces of sculpture, lately given by the Lowell family, add greatly to the Egyptian collection.

i 7 of these are modern portraits.

j Includes publications of Arundel Society, the Berlin Museum series, and heliotypes of the Gray collection.

k Also 7 illuminated manuscripts, and a large and fine collection of specimens of wood carving.

l Photographs of the leading works of art in its possession are taken, to be obtained only at the gallery.

m These are coins, and are exclusive of the large number contained in the new Di Cesnola collection.

n The Abbott collection; the museum also contains the Lenox collection of Nineveh sculptures, 13 pieces. The society owns a large collection of antiquities relating to North and South America not yet displayed.

o Also tapestry from Warwick Castle.

p The collection of students' work exhibited at the Centennial by the South Kensington authorities was given to this museum. The whole of the superb India collection was also given. The museum exhibits a rare and very complete collection of Persian stuffs, &c. It owns an important collection of textile fabrics, embroideries, and costumes; specimens of work in wood, metal, and stone illustrating the use of ornament in architecture; many articles of work in the precious metals, and the case of reproductions of the South Kensington mediæval work exhibited by Elkington & Co., at the Centennial. Many fine specimens of Oriental work in pottery, bronze, and jade are also included in the loan collections now on exhibition.

q 200 original drawings, 200 Braun's autotypes, 558 lithographs, 150 photographs.

r Also 10 fac similes of illuminated manuscripts.

s Several volumes of fine engravings, among them the Musée Français, Musée Royal, Hogarth's Works, Canova's Works, &c., are in the library of the Athenæum.

t Electrotype reproductions of the Hildesheim treasures, 30 pieces; galvanoplastic reproductions of articles in the Kensington Museum, 82 pieces.

u 2 remarkable Japanese porcelain vases made for the Centennial, 1 large Japanese porcelain bowl, 5 specimens of cloisonné, old Chinese, and modern Elkington; in addition to these many rare and valuable articles, antique and modern, which cannot be classified in this table, are in the hall of bronzes and ceramic ware of the Corcoran Gallery of Art.

† Many. § A few.

a Under "Casts of sculpture," only casts of statues and busts, life size or heroic, are enumerated.

b Under "Other casts," are included all statuettes, parts of human figure, and all casts of foliage, architectural ornament, &c., for use of students in drawing.

c 4 sets.

d 40 original oil studies by distinguished students of the École des Beaux-Arts, Paris.

e Also 490 medallions, 100 Braun's autotypes of old masters, and a large collection of chromo-lithographs and photographs.

f 4 of the casts are of statues. The school has also 37 modern paintings, 2,000 photographs, lithographs, &c., and a set of drawings given by the life school at Paris.

g Living models secured for life classes; no other material provided.

h In addition, there are 12 pupils in a ladies' advanced class and 20 pupils in the men's life class.

i The school possesses a flayed manikin and several hundred casts of torsos, limbs, animals, and architectural ornaments.

j There are many hundred samples of foreign and domestic textile fabrics and wall paper.
